PATENT TRADEMARK OFFICE

MONOCYCLIC DERIVATIVES AS MATRIX
METALLOPROTEINASE INHIBITORS

CROSS-REFERENCE TO RELATED APPLICATIONS

This application claims benefit of priority from United States Provisional Patent Application Number 60/403,040, filed August 13, 2002.

FIELD OF THE INVENTION

This invention relates to monocyclic derivatives which inhibit matrix metalloproteinase enzymes and thus are useful for treating diseases resulting from MMP-mediated tissue breakdown such as heart disease, cardiac insufficiency, inflammatory bowel disease, multiple sclerosis, osteo- and rheumatoid arthritis, arthritis other than osteo- or rheumatoid arthritis, heart failure, age-related macular degeneration, chronic obstructive pulmonary disease, asthma, periodontal diseases, psoriasis, atherosclerosis, and osteoporosis.

BACKGROUND OF THE INVENTION

Matrix metalloproteinases (sometimes referred to as MMPs) are naturally occurring enzymes found in most mammals. Over-expression and activation of MMPs, or an imbalance between MMPs and inhibitors of MMPs, have been suggested as factors in the pathogenesis of diseases characterized by the breakdown of extracellular matrix or connective tissues.

Stromelysin-1 and gelatinase A are members of the MMP family. Other members include fibroblast collagenase (MMP-1), neutrophil collagenase (MMP-8), gelatinase B (92 kDa gelatinase) (MMP-9), stromelysin-2 (MMP-10), stromelysin-3 (MMP-11), matrilysin (MMP-7), collagenase 3 (MMP-13), TNF-alpha converting enzyme (TACE), and other newly discovered membrane-associated matrix metalloproteinases (Sato H., Takino T., Okada Y., Cao J., Shinagawa A., Yamamoto E., and Seiki M., *Nature*, 1994;370:61-65). These

enzymes have been implicated with a number of diseases which result from breakdown of connective tissue, including such diseases as rheumatoid arthritis, osteoarthritis, osteoporosis, periodontitis, multiple sclerosis, gingivitis, corneal epidermal and gastric ulceration, atherosclerosis, neointimal proliferation which leads to restenosis and ischemic heart failure, and tumor metastasis. A method for preventing and treating these and other diseases is now recognized to be by inhibiting matrix metalloproteinase enzymes, thereby curtailing and/or eliminating the breakdown of connective tissues that results in the disease states.

There is a catalytic zinc domain in matrix metalloproteinases that is typically the focal point for inhibitor design. The modification of substrates by introducing zinc-chelating groups has generated potent inhibitors such as peptide hydroxamates and thiol-containing peptides. Peptide hydroxamates and the natural endogenous inhibitors of MMPs (TIMPs) have been used successfully to treat animal models of cancer and inflammation. MMP inhibitors have also been used to prevent and treat congestive heart failure and other cardiovascular diseases, United States Patent No. 5,948,780.

A major limitation on the use of currently known MMP inhibitors is their lack of specificity for any particular enzyme. Recent data has established that specific MMP enzymes are associated with some diseases, with no effect on others. The MMPs are generally categorized based on their substrate specificity, and indeed the collagenase subfamily of MMP-1, MMP-8, and MMP-13 selectively cleave native interstitial collagens, and thus are associated only with diseases linked to such interstitial collagen tissue. This is evidenced by the recent discovery that MMP-13 alone is over expressed in breast carcinoma, while MMP-1 alone is over expressed in papillary carcinoma (see Chen et al., *J. Am. Chem. Soc.*, 2000;122:9648-9654).

Selective inhibitors of MMP-13 include a compound named WAY-170523, which has been reported by Chen et al., supra., 2000, and other compounds are reported in PCT International Patent Application Publication numbers WO 01/63244; WO 00/09485; WO 01/12611; WO 02/34726; and WO 02/34753, and European Patent Application numbers EP 935,963 and EP 1,138,680. Further, United States Patent number 6,008,243 discloses inhibitors of MMP-13. However, no selective or nonselective inhibitor of MMP-13 has been

approved and marketed for the treatment of any disease in any mammal. Accordingly, the need continues to find new low molecular weight compounds that are potent and selective MMP inhibitors, and that have an acceptable therapeutic index of toxicity/potency to make them amenable for use clinically in the prevention and treatment of the associated disease states. An object of this invention is to provide a group of selective MMP-13 inhibitor compounds characterized as being monocyclic derivatives.

SUMMARY OF THE INVENTION

This invention provides a monocyclic derived compound defined by
10 Formula I.

Accordingly, embodiments of the invention include:

1. A compound of Formula I

or a pharmaceutically acceptable salt thereof,
15 wherein:

R¹ and R² independently are selected from:

C₁-C₆ alkyl;
Substituted C₁-C₆ alkyl;
C₂-C₆ alkenyl;
20 Substituted C₂-C₆ alkenyl;
C₂-C₆ alkynyl;
Substituted C₂-C₆ alkynyl;
C₃-C₆ cycloalkyl;
Substituted C₃-C₆ cycloalkyl;
25 C₃-C₆ cycloalkyl-(C₁-C₆ alkylene);
Substituted C₃-C₆ cycloalkyl-(C₁-C₆ alkylene);
3- to 6-membered heterocycloalkyl;
Substituted 3- to 6-membered heterocycloalkyl;

- 3- to 6-membered heterocycloalkyl-(C₁-C₆ alkylenyl);
Substituted 3- to 6-membered heterocycloalkyl-(C₁-C₆ alkylenyl);
Phenyl-(C₁-C₆ alkylenyl);
Substituted phenyl-(C₁-C₆ alkylenyl);
5 Naphthyl-(C₁-C₆ alkylenyl);
Substituted naphthyl-(C₁-C₆ alkylenyl);
5-, 6-, 9-, and 10-membered heteroaryl-(C₁-C₆ alkylenyl);
Substituted 5-, 6-, 9-, and 10-membered heteroaryl-(C₁-C₆ alkylenyl);
Phenyl;
10 Substituted phenyl;
Naphthyl;
Substituted naphthyl;
5-, 6-, 9-, and 10-membered heteroaryl;
Substituted 5-, 6-, 9-, and 10-membered heteroaryl;
15 R³O-(C₁-C₆ alkylenyl);
Substituted R³O-(C₁-C₆ alkylenyl);
Phenyl-O-(C₁-C₈ alkylenyl);
Substituted phenyl-O-(C₁-C₈ alkylenyl);
Phenyl-S-(C₁-C₈ alkylenyl);
20 Substituted phenyl-S-(C₁-C₈ alkylenyl);
Phenyl-S(O)-(C₁-C₈ alkylenyl);
Substituted phenyl-S(O)-(C₁-C₈ alkylenyl);
Phenyl-S(O)₂-(C₁-C₈ alkylenyl); and
Substituted phenyl-S(O)₂-(C₁-C₈ alkylenyl);
25 wherein R¹ and R² are not both selected from:
C₁-C₆ alkyl;
C₂-C₆ alkenyl;
C₂-C₆ alkynyl; and
C₃-C₆ cycloalkyl;
30 Each R³ independently is selected from:
H;
C₁-C₆ alkyl;

- Substituted C₁-C₆ alkyl;
C₃-C₆ cycloalkyl;
Substituted C₃-C₆ cycloalkyl;
Phenyl-(C₁-C₆ alkylene);
5 Substituted phenyl-(C₁-C₆ alkylene);
Naphthyl-(C₁-C₆ alkylene);
Substituted naphthyl-(C₁-C₆ alkylene);
5-, 6-, 9-, and 10-membered heteroaryl-(C₁-C₆ alkylene);
Substituted 5-, 6-, 9-, and 10-membered heteroaryl-(C₁-C₆ alkylene);
10 Phenyl;
Substituted phenyl;
Naphthyl;
Substituted naphthyl;
5-, 6-, 9-, and 10-membered heteroaryl;
15 Substituted 5-, 6-, 9-, and 10-membered heteroaryl;

D is a heteromonocyclic diradical:

5

5 Each R⁴ independently is selected from:

H;

F;

CH₃;

CF₃;

10 C(O)H;

CN;

HO;

CH₃O;

C(F)H₂O;

15 C(H)F₂O; and

CF₃O;

t is an integer of 0 or 1;

V¹ is selected from:

a 5-membered heteroarylenyl;

20 CH₂C≡C;

CF₂C C≡C;

C(O)O;

C(S)O;
C(O)N(R⁵); and
C(S)N(R⁵);

Q, when bonded to a nitrogen atom in group D, is selected from:

- 5 OC(O);
CH(R⁶)C(O);
OC(NR⁶);
CH(R⁶)C(NR⁶);
N(R⁶)C(O);

- 10 N(R⁶)C(S);
N(R⁶)C(NR⁶);
SC(O);
CH(R⁶)C(S);
SC(NR⁶);

- 15 C≡CCH₂;
C≡CCF₂;

- Q, when bonded to a carbon atom in group D, is as defined above and may further
20 be selected from:

- OCH₂;
N(R⁶)CH₂;
trans-(H)C=C(H);
cis-(H)C=C(H);

- C≡C;
CH₂C≡C; and
CF₂C≡C;
- Each X independently is O, S, N(H), or N(C₁-C₆ alkyl);
- 5 Each V independently is C(H) or N;
- Each R⁵ independently is H or C₁-C₆ alkyl;
- R⁶ is H, C₁-C₆ alkyl, C₃-C₆ cycloalkyl; 3- to 6-membered heterocycloalkyl;
 phenyl; benzyl; or 5- or 6-membered heteroaryl;
- Each “substituted” group contains from 1 to 4 substituents, each independently on
10 a carbon or nitrogen atom, independently selected from:
- C₁-C₆ alkyl;
- C₂-C₆ alkenyl;
- C₂-C₆ alkynyl;
- C₃-C₆ cycloalkyl;
- 15 C₃-C₆ cycloalkylmethyl;
- Phenyl;
- Phenylmethyl;
- 3- to 6-membered heterocycloalkyl;
- 3- to 6-membered heterocycloalkylmethyl;
- 20 cyano;
- CF₃;
- (C₁-C₆ alkyl)-OC(O);
- HOCH₂;
- (C₁-C₆ alkyl)-OCH₂;
- 25 H₂NCH₂;
- (C₁-C₆ alkyl)-N(H)CH₂;
- (C₁-C₆ alkyl)₂-NCH₂;
- N(H)₂C(O);
- (C₁-C₆ alkyl)-N(H)C(O);
- 30 (C₁-C₆ alkyl)₂-NC(O);
- N(H)₂C(O)N(H);
- (C₁-C₆ alkyl)-N(H)C(O)N(H);

- N(H)₂C(O)N(C₁-C₆ alkyl);
(C₁-C₆ alkyl)-N(H)C(O)N(C₁-C₆ alkyl);
(C₁-C₆ alkyl)₂-NC(O)N(H);
(C₁-C₆ alkyl)₂-NC(O)N(C₁-C₆ alkyl);
- 5 N(H)₂C(O)O;
(C₁-C₆ alkyl)-N(H)C(O)O;
(C₁-C₆ alkyl)₂-NC(O)O;
HO;
(C₁-C₆ alkyl)-O;
- 10 CF₃O;
CF₂(H)O;
CF(H)₂O;
H₂N;
(C₁-C₆ alkyl)-N(H);
- 15 (C₁-C₆ alkyl)₂-N;
O₂N;
(C₁-C₆ alkyl)-S;
(C₁-C₆ alkyl)-S(O);
(C₁-C₆ alkyl)-S(O)₂;
- 20 (C₁-C₆ alkyl)₂-NS(O)₂;
(C₁-C₆ alkyl)-S(O)₂-N(H)-C(O)-(C₁-C₈ alkylene)_m; and
(C₁-C₆ alkyl)-C(O)-N(H)-S(O)₂-(C₁-C₈ alkylene)_m;
- wherein each substituent on a carbon atom may further be independently selected from:
- 25 Halo;
HO₂C; and
OCH₂O, wherein each O is bonded to adjacent carbon atoms to form a 5-membered ring;
- wherein 2 substituents may be taken together with a carbon atom to which they
30 are both bonded to form the group C=O;
- wherein two adjacent, substantially sp² carbon atoms may be taken together with a diradical substituent to form a cyclic diradical selected from:

Each m independently is an integer of 0 or 1;

R is H or C₁-C₆ alkyl;

wherein each 5-membered heteroarylenyl independently is a 5-membered ring

containing carbon atoms and from 1 to 4 heteroatoms selected from 1 O, 1

10 S, 1 NH, 1 N(C₁-C₆ alkyl), and 4 N, wherein the O and S atoms are not both present, and wherein the heteroarylenyl may optionally be unsubstituted or substituted with 1 substituent selected from fluoro, methyl, hydroxy, trifluoromethyl, cyano, and acetyl;

wherein each heterocycloalkyl is a ring that contains carbon atoms and 1 or 2

15 heteroatoms independently selected from 2 O, 1 S, 1 S(O), 1 S(O)₂, 1 N, 2 N(H), and 2 N(C₁-C₆ alkyl), and wherein when two O atoms or one O atom and one S atom are present, the two O atoms or one O atom and one S atom are not bonded to each other, and wherein the ring is saturated or optionally contains one carbon-carbon or carbon-nitrogen double bond;

wherein each 5-membered heteroaryl contains carbon atoms and from 1 to 4 heteroatoms independently selected from 1 O, 1 S, 1 N(H), 1 N(C₁-C₆ alkyl), and 4 N, and each 6-membered heteroaryl contains carbon atoms and 1 or 2 heteroatoms independently selected from N, N(H), and N(C₁-C₆ alkyl), and 5- and 6-membered heteroaryl are monocyclic rings; and 9- and 10-membered heteroaryl are 6,5-fused and 6,6-fused bicyclic rings, respectively, wherein at least 1 of the 2 fused rings of a bicyclic ring is aromatic, and wherein when the O and S atoms both are present, the O and S atoms are not bonded to each other;

wherein with any (C₁-C₆ alkyl)₂-N group, the C₁-C₆ alkyl groups may be optionally taken together with the nitrogen atom to which they are attached to form a 5- or 6-membered heterocycloalkyl; and

wherein each group and each substituent recited above is independently selected.

15 2. The compound according to Embodiment 1, or a pharmaceutically
acceptable salt thereof, wherein V^1 is selected from the groups:

wherein X is O, S, N(H), or N(C₁-C₆ alkyl) and V¹ may optionally be unsubstituted or substituted at C(H) or N(H) with 1 substituent selected from fluoro, methyl, hydroxy, trifluoromethyl, cyano, and acetyl.

- 5 3. The compound according to Embodiment 1, or a pharmaceutically acceptable salt thereof, wherein V¹ is selected from the groups:

- 10 wherein X is O, S, N(H), or N(C₁-C₆ alkyl), R⁴ is H or C₁-C₆ alkyl, and V¹ may optionally be unsubstituted or substituted at C(H) or N(H) with 1 substituent selected from fluoro, methyl, hydroxy, trifluoromethyl, cyano, and acetyl.

- 15 4. The compound according to Embodiment 1, or a pharmaceutically acceptable salt thereof, wherein V¹ is selected from the groups:

wherein X is O, S, N(H), or N(C₁-C₆ alkyl), Y is O, S, or N, and R⁴ is H or C₁-C₆ alkyl, and V¹ may optionally be unsubstituted or substituted at C(H) or N(H) with 1 substituent selected from fluoro, methyl, hydroxy, trifluoromethyl, cyano, and acetyl.

5

5. The compound according to Embodiment 1, or a pharmaceutically acceptable salt thereof, wherein V¹ is selected from the groups:

10 wherein X is O, S, N(H), or N(C₁-C₆ alkyl), and V¹ may optionally be unsubstituted or substituted at C(H) with 1 substituent selected from fluoro, methyl, hydroxy, trifluoromethyl, cyano, and acetyl.

6. The compound according to Embodiment 1, or a pharmaceutically acceptable salt thereof, wherein V^1 is selected from the groups:

5 wherein X is O, S, N(H), or N(C₁-C₆ alkyl), and V^1 may optionally be unsubstituted or substituted at C(H) with 1 substituent selected from fluoro, methyl, hydroxy, trifluoromethyl, cyano, and acetyl.

7. The compound according to Embodiment 1, or a pharmaceutically acceptable salt thereof, wherein V^1 is selected from the groups:

10 8. The compound according to Embodiment 1, or a pharmaceutically acceptable salt thereof, wherein V^1 is C(O)N(R⁵).

15 9. The compound according to Embodiment 1, or a pharmaceutically acceptable salt thereof, wherein V^1 is C(O)O.

20 10. The compound according to any one of Embodiments 1 to 7, or a pharmaceutically acceptable salt thereof, wherein Q is C≡C, CH₂C≡C, or CF₂C≡C, and is attached at a carbon atom in group D.

11. The compound according to any one of Embodiments 1 to 7, or a pharmaceutically acceptable salt thereof, wherein Q is OC(O).
12. The compound according to any one of Embodiments 1 to 7, or a pharmaceutically acceptable salt thereof, wherein Q is N(R⁶)C(O).
5
13. The compound according to any one of Embodiments 1 to 7, or a pharmaceutically acceptable salt thereof, wherein Q is N(H)C(O).
- 10 14. The compound according to any one of Embodiments 1 to 9, or a pharmaceutically acceptable salt thereof, wherein Q is N(H)CH₂, N(CH₃)CH₂, C≡CCH₂, or C≡CCF₂, and is attached at a carbon atom in group D.
- 15 15. The compound according to any one of Embodiments 1 to 9, or a pharmaceutically acceptable salt thereof, wherein Q is
15
- 
16. The compound according to any one of Embodiments 1 to 15, or a pharmaceutically acceptable salt thereof, wherein at least one of R¹ and R² is
20 independently selected from:
Phenyl-(C₁-C₆ alkylene); and
Substituted phenyl-(C₁-C₆ alkylene);
wherein each group and each substituent is independently selected.
- 25 17. The compound according to any one of Embodiments 1 to 15, or a pharmaceutically acceptable salt thereof, wherein each of R¹ and R² are independently selected from:
Phenyl-(C₁-C₆ alkylene); and
Substituted phenyl-(C₁-C₆ alkylene);
30 wherein each group and each substituent is independently selected.

18. The compound according to any one of Embodiments 1 to 15, or a pharmaceutically acceptable salt thereof, wherein at least one of R¹ and R² is independently selected from:
- 5-, 6-, 9-, and 10-membered heteroaryl-(C₁-C₆ alkylene); and
Substituted 5-, 6-, 9-, and 10-membered heteroaryl-(C₁-C₆ alkylene);
wherein each heteroaryl contains carbon atoms and from 1 to 4 heteroatoms independently selected from 1 O, 1 S, 1 N(H), 1 N(C₁-C₆ alkyl), and 4 N, and 5- and 6-membered heteroaryl are monocyclic rings and 9- and 10-membered heteroaryl are 6,5-fused and 6,6-fused bicyclic rings,
respectively, wherein at least 1 of the 2 fused rings of a bicyclic ring is aromatic, and wherein when the O and S atoms both are present, the O and S atoms are not bonded to each other; and
wherein each group and each substituent is independently selected.
- 15 19. The compound according to any one of Embodiments 1 to 15, or a pharmaceutically acceptable salt thereof, wherein each of R¹ and R² is independently selected from:
- 5-, 6-, 9-, and 10-membered heteroaryl-(C₁-C₆ alkylene); and
Substituted 5-, 6-, 9-, and 10-membered heteroaryl-(C₁-C₆ alkylene);
wherein each heteroaryl contains carbon atoms and from 1 to 4 heteroatoms independently selected from 1 O, 1 S, 1 N(H), 1 N(C₁-C₆ alkyl), and 4 N, and 5- and 6-membered heteroaryl are monocyclic rings and 9- and 10-membered heteroaryl are 6,5-fused and 6,6-fused bicyclic rings,
respectively, wherein at least 1 of the 2 fused rings of a bicyclic ring is aromatic, and wherein when the O and S atoms both are present, the O and S atoms are not bonded to each other; and
wherein each group and each substituent is independently selected.
- 20 25 20. The compound according to any one of Embodiments 1 to 15, 18, and 19, or a pharmaceutically acceptable salt thereof, wherein at least one of R¹ and R² is independently selected from:
- 5-, 6-, and 9-membered heteroaryl-(C₁-C₆ alkylene); and
Substituted 5-, 6-, 9-membered heteroaryl-(C₁-C₆ alkylene);

wherein each heteroaryl contains carbon atoms and from 1 to 4 heteroatoms independently selected from 1 O, 1 S, 1 N(H), 1 N(C₁-C₆ alkyl), and 4 N, and 5- and 6-membered heteroaryl are monocyclic rings and 9-membered heteroaryl is 6,5-fused bicyclic ring, wherein at least 1 of the 2 fused rings of a bicyclic ring is aromatic, and wherein when the O and S atoms both are present, the O and S atoms are not bonded to each other; and wherein each group and each substituent is independently selected.

5 21. The compound according to any one of Embodiments 1 to 15, or a pharmaceutically acceptable salt thereof, wherein at least one of R¹ and R² is independently selected from:

10 3- to 6-membered heterocycloalkyl-(C₁-C₆ alkylene); and

15 Substituted 3- to 6-membered heterocycloalkyl-(C₁-C₆ alkylene);

wherein each heterocycloalkyl is a ring that contains carbon atoms and 1 or 2 heteroatoms independently selected from 2 O, 1 S, 1 S(O), 1 S(O)₂, 1 N, 2 N(H), and 2 N(C₁-C₆ alkyl), and wherein when two O atoms or one O atom and one S atom are present, the two O atoms or one O atom and one S atom are not bonded to each other, and wherein the ring is saturated or optionally contains one carbon-carbon or carbon-nitrogen double bond;

20 and

wherein each group and each substituent recited above is independently selected.

22. The compound according to any one of Embodiments 1 to 15, or a pharmaceutically acceptable salt thereof, wherein one of R¹ and R² is independently selected from:

25 C₂-C₆ alkenyl; and

Substituted C₂-C₆ alkenyl.

23. The compound according to any one of Embodiments 1 to 15, or a pharmaceutically acceptable salt thereof, wherein one of R¹ and R² is independently selected from:

30 C₁-C₆ alkyl; and

Substituted C₁-C₆ alkyl.

24. The compound according to any one of Embodiments 1 to 15, or a pharmaceutically acceptable salt thereof, wherein one of R¹ and R² is independently selected from:

5 C₂-C₆ alkynyl; and
 Substituted C₂-C₆ alkynyl.

25. The compound according to any one of Embodiments 1 to 15, or a pharmaceutically acceptable salt thereof, wherein at least one of R¹ and R² is independently selected from:

10 C₃-C₆ cycloalkyl-(C₁-C₆ alkylenyl); and
 Substituted C₃-C₆ cycloalkyl-(C₁-C₆ alkylenyl).

26. The compound according to any one of Embodiments 1 to 15, or a pharmaceutically acceptable salt thereof, wherein one of R¹ and R² is independently selected from:

15 C₃-C₆ cycloalkyl;
 Substituted C₃-C₆ cycloalkyl
 3- to 6-membered heterocycloalkyl;
20 Substituted 3- to 6-membered heterocycloalkyl;
 Phenyl;
 Substituted phenyl;
 Naphthyl;
 Substituted naphthyl;
25 5-, 6-, 9-, and 10-membered heteroaryl; and
 Substituted 5-, 6-, 9-, and 10-membered heteroaryl;

30 The compound according to any one of Embodiments 1 to 15, or a pharmaceutically acceptable salt thereof, wherein R² is C₂-C₆ alkynyl or substituted C₂-C₆ alkynyl.

28. The compound according to any one of Embodiments 1 to 27, or a pharmaceutically acceptable salt thereof, wherein each C₁-C₆ alkylene is CH₂, C(CH₃)₂, C(=O), or CF₂.
- 5 29. The compound according to any one of Embodiments 1 to 28, or a pharmaceutically acceptable salt thereof, wherein t is 1.
- 10 30. The compound according to any one of Embodiments 1 to 29, or a pharmaceutically acceptable salt thereof, wherein at least one substituent is selected from the groups:
- CO₂H;
- CO₂CH₃;
- CH₃O;
- F;
- 15 Cl;
- CN;
- CF₃;
- CH₃S(O)₂;
- CH₃; or
- 20 wherein at least two substituents are Cl and F, 2 F, or OCH₂O, wherein each O is bonded to adjacent carbon atoms to form a 5-membered ring.

31. A compound of Formula II

II

- 25 or a pharmaceutically acceptable salt thereof,
wherein:
R¹ and R² independently are selected from:

- C₁-C₆ alkyl;
Substituted C₁-C₆ alkyl;
C₂-C₆ alkenyl;
Substituted C₂-C₆ alkenyl;
- 5 C₂-C₆ alkynyl;
Substituted C₂-C₆ alkynyl;
C₃-C₆ cycloalkyl;
Substituted C₃-C₆ cycloalkyl;
C₃-C₆ cycloalkyl-(C₁-C₆ alkylene);
- 10 Substituted C₃-C₆ cycloalkyl-(C₁-C₆ alkylene);
3- to 6-membered heterocycloalkyl;
Substituted 3- to 6-membered heterocycloalkyl;
3- to 6-membered heterocycloalkyl-(C₁-C₆ alkylene);
Substituted 3- to 6-membered heterocycloalkyl-(C₁-C₆ alkylene);
- 15 Phenyl-(C₁-C₆ alkylene);
Substituted phenyl-(C₁-C₆ alkylene);
Naphthyl-(C₁-C₆ alkylene);
Substituted naphthyl-(C₁-C₆ alkylene);
5-, 6-, 9-, and 10-membered heteroaryl-(C₁-C₆ alkylene);
- 20 Substituted 5-, 6-, 9-, and 10-membered heteroaryl-(C₁-C₆ alkylene);
Phenyl;
Substituted phenyl;
Naphthyl;
Substituted naphthyl;
- 25 5-, 6-, 9-, and 10-membered heteroaryl;
Substituted 5-, 6-, 9-, and 10-membered heteroaryl;
R³O-(C₁-C₆ alkylene);
Substituted R³O-(C₁-C₆ alkylene);
Phenyl-O-(C₁-C₈ alkylene);
- 30 Substituted phenyl-O-(C₁-C₈ alkylene);
Phenyl-S-(C₁-C₈ alkylene);
Substituted phenyl-S-(C₁-C₈ alkylene);

Phenyl-S(O)-(C₁-C₈ alkylene);
Substituted phenyl-S(O)-(C₁-C₈ alkylene);
Phenyl-S(O)₂-(C₁-C₈ alkylene); and
Substituted phenyl-S(O)₂-(C₁-C₈ alkylene);

5 wherein R¹ and R² are not both selected from:

C₁-C₆ alkyl;
C₂-C₆ alkenyl;
C₂-C₆ alkynyl; and
C₃-C₆ cycloalkyl;

10 Each R³ independently is selected from:

H;
C₁-C₆ alkyl;
Substituted C₁-C₆ alkyl;
C₃-C₆ cycloalkyl;
15 Substituted C₃-C₆ cycloalkyl;
Phenyl-(C₁-C₆ alkylene);
Substituted phenyl-(C₁-C₆ alkylene);
Naphthyl-(C₁-C₆ alkylene);
Substituted naphthyl-(C₁-C₆ alkylene);

20 5-, 6-, 9-, and 10-membered heteroaryl-(C₁-C₆ alkylene);

Substituted 5-, 6-, 9-, and 10-membered heteroaryl-(C₁-C₆ alkylene);

Phenyl;

Substituted phenyl;

Naphthyl;

25 Substituted naphthyl;

5-, 6-, 9-, and 10-membered heteroaryl;

Substituted 5-, 6-, 9-, and 10-membered heteroaryl;

Each R⁴ independently is selected from:

30 H;
F;
CH₃;
CF₃;

- C(O)H;
CN;
HO;
CH₃O;
5 C(F)H₂O;
C(H)F₂O; and
CF₃O;

t is an integer of 0 or 1;

V¹ is selected from:

- 10 a 5-membered heteroarylenyl;
CH₂C≡C;
CF₂C C≡C;
C(O)O;
C(S)O;
15 C(O)N(R⁵); and
C(S)N(R⁵);

Q, when bonded to a nitrogen atom in group D, is selected from:

- OC(O);
CH(R⁶)C(O);
20 OC(NR⁶);
CH(R⁶)C(NR⁶);
N(R⁶)C(O);
N(R⁶)C(S);
N(R⁶)C(NR⁶);
25 SC(O);
CH(R⁶)C(S);
SC(NR⁶);
C≡CCH₂;
C≡CCF₂;

Q, when bonded to a carbon atom in group D, is as defined above and may further be selected from:

OCH₂;

5 N(R⁶)CH₂;

trans-(H)C=C(H);

cis-(H)C=C(H);

C≡C;

CH₂C≡C; and

10 CF₂C≡C;

Each X independently is O, S, N(H), or N(C₁-C₆ alkyl);

Each V independently is C(H) or N;

Each R⁵ independently is H or C₁-C₆ alkyl;

R⁶ is H, C₁-C₆ alkyl, C₃-C₆ cycloalkyl; 3- to 6-membered heterocycloalkyl;

15 phenyl; benzyl; or 5- or 6-membered heteroaryl;

Each "substituted" group contains from 1 to 4 substituents, each independently on a carbon or nitrogen atom, independently selected from:

C₁-C₆ alkyl;

C₂-C₆ alkenyl;

20 C₂-C₆ alkynyl;

C₃-C₆ cycloalkyl;

C₃-C₆ cycloalkylmethyl;

Phenyl;

Phenylmethyl;

wherein each substituent on a carbon atom may further be independently selected

5 from:

Halo;

HO₂C; and

OCH₂O, wherein each O is bonded to adjacent carbon atoms to form a 5-membered ring;

10 wherein 2 substituents may be taken together with a carbon atom to which they are both bonded to form the group C=O;

wherein two adjacent, substantially sp² carbon atoms may be taken together with a diradical substituent to form a cyclic diradical selected from:

15

Each m independently is an integer of 0 or 1;

R is H or C₁-C₆ alkyl;
wherein each 5-membered heteroarylenyl independently is a 5-membered ring
containing carbon atoms and from 1 to 4 heteroatoms selected from 1 O, 1
S, 1 NH, 1 N(C₁-C₆ alkyl), and 4 N, wherein the O and S atoms are not
5 both present, and wherein the heteroarylenyl may optionally be
unsubstituted or substituted with 1 substituent selected from fluoro,
methyl, hydroxy, trifluoromethyl, cyano, and acetyl;
wherein each heterocycloalkyl is a ring that contains carbon atoms and 1 or 2
heteroatoms independently selected from 2 O, 1 S, 1 S(O), 1 S(O)₂, 1 N, 2
10 N(H), and 2 N(C₁-C₆ alkyl), and wherein when two O atoms or one O
atom and one S atom are present, the two O atoms or one O atom and one
S atom are not bonded to each other, and wherein the ring is saturated or
optionally contains one carbon-carbon or carbon-nitrogen double bond;
wherein each 5-membered heteroaryl contains carbon atoms and from 1 to 4
15 heteroatoms independently selected from 1 O, 1 S, 1 N(H), 1 N(C₁-C₆
alkyl), and 4 N, and each 6-membered heteroaryl contains carbon atoms
and 1 or 2 heteroatoms independently selected from N, N(H), and N(C₁-C₆
alkyl), and 5- and 6-membered heteroaryl are monocyclic rings; and 9- and
10-membered heteroaryl are 6,5-fused and 6,6-fused bicyclic rings,
20 respectively, wherein at least 1 of the 2 fused rings of a bicyclic ring is
aromatic, and wherein when the O and S atoms both are present, the O and
S atoms are not bonded to each other;
wherein with any (C₁-C₆ alkyl)₂-N group, the C₁-C₆ alkyl groups may be
optionally taken together with the nitrogen atom to which they are attached
25 to form a 5- or 6-membered heterocycloalkyl; and
wherein each group and each substituent recited above is independently selected.

32. The compound according to Embodiment 31, selected from:
4-[5-(3-Benzylcarbamoyl-2,6-dioxo-3,6-dihydro-2H-pyrazin-1-yl)-
30 tetrazol-2-yl]-benzoic acid;
4-(5-{2,6-Dioxo-3-[(pyridin-4-ylmethyl)-carbamoyl]-3,6-dihydro-2H-
pyrazin-1-yl}-tetrazol-2-yl)-benzoic acid;

- 4-[3-(3-Benzylcarbamoyl-2,6-dioxo-3,6-dihydro-2H-pyrazin-1-yl)-prop-2-ynyl]-benzoic acid;
- 4-(3-{2,6-Dioxo-3-[(pyridin-4-ylmethyl)-carbamoyl]-3,6-dihydro-2H-pyrazin-1-yl}-prop-2-ynyl)-benzoic acid;
- 5 4-{2-[2,6-Dioxo-3-(3-phenyl-prop-1-ynyl)-3,6-dihydro-2H-pyrazin-1-yl]-oxazol-5-yl}-benzoic acid;
- 4-{2-[3-(3-Imidazol-1-yl-prop-1-ynyl)-2,6-dioxo-3,6-dihydro-2H-pyrazin-1-yl]-oxazol-4-yl}-benzoic acid;
- 10 4-{3-[2,6-Dioxo-3-(3-phenyl-prop-1-ynyl)-3,6-dihydro-2H-pyrazin-1-yl]-prop-2-ynyl}-benzoic acid;
- 4-{3-[3-(3-Imidazol-1-yl-prop-1-ynyl)-2,6-dioxo-3,6-dihydro-2H-pyrazin-1-yl]-prop-2-ynyl}-benzoic acid;
- 4-({[2,6-Dioxo-3-(5-phenyl-oxazol-2-yl)-3,6-dihydro-2H-pyrazine-1-carbonyl]-amino}-methyl)-benzoic acid;
- 15 4-{3-[2,6-Dioxo-3-(5-phenyl-oxazol-2-yl)-3,6-dihydro-2H-pyrazin-1-yl]-prop-2-ynyl}-benzoic acid;
- 4-{5-[2,6-Dioxo-3-(4-phenyl-oxazol-2-yl)-3,6-dihydro-2H-pyrazin-1-yl]-tetrazol-2-yl}-benzoic acid; and
- 4-{3-[2,6-Dioxo-3-(4-phenyl-oxazol-2-yl)-3,6-dihydro-2H-pyrazin-1-yl]-prop-2-ynyl}-benzoic acid;
- 20 or a pharmaceutically acceptable salt thereof.

33. A compound of Formula III

- 25 or a pharmaceutically acceptable salt thereof,
wherein:

R¹ and R² independently are selected from:

C₁-C₆ alkyl;

- Substituted C₁-C₆ alkyl;
C₂-C₆ alkenyl;
Substituted C₂-C₆ alkenyl;
C₂-C₆ alkynyl;
- 5 Substituted C₂-C₆ alkynyl;
C₃-C₆ cycloalkyl;
Substituted C₃-C₆ cycloalkyl;
C₃-C₆ cycloalkyl-(C₁-C₆ alkylene);
Substituted C₃-C₆ cycloalkyl-(C₁-C₆ alkylene);
- 10 3- to 6-membered heterocycloalkyl;
Substituted 3- to 6-membered heterocycloalkyl;
3- to 6-membered heterocycloalkyl-(C₁-C₆ alkylene);
Substituted 3- to 6-membered heterocycloalkyl-(C₁-C₆ alkylene);
Phenyl-(C₁-C₆ alkylene);
- 15 Substituted phenyl-(C₁-C₆ alkylene);
Naphthyl-(C₁-C₆ alkylene);
Substituted naphthyl-(C₁-C₆ alkylene);
5-, 6-, 9-, and 10-membered heteroaryl-(C₁-C₆ alkylene);
Substituted 5-, 6-, 9-, and 10-membered heteroaryl-(C₁-C₆ alkylene);
- 20 Phenyl;
Substituted phenyl;
Naphthyl;
Substituted naphthyl;
5-, 6-, 9-, and 10-membered heteroaryl;
- 25 Substituted 5-, 6-, 9-, and 10-membered heteroaryl;
R³O-(C₁-C₆ alkylene);
Substituted R³O-(C₁-C₆ alkylene);
Phenyl-O-(C₁-C₈ alkylene);
Substituted phenyl-O-(C₁-C₈ alkylene);
- 30 Phenyl-S-(C₁-C₈ alkylene);
Substituted phenyl-S-(C₁-C₈ alkylene);
Phenyl-S(O)-(C₁-C₈ alkylene);

Substituted phenyl-S(O)-(C₁-C₈ alkylenyl);

Phenyl-S(O)₂-(C₁-C₈ alkylenyl); and

Substituted phenyl-S(O)₂-(C₁-C₈ alkylenyl);

wherein R¹ and R² are not both selected from:

5 C₁-C₆ alkyl;

C₂-C₆ alkenyl;

C₂-C₆ alkynyl; and

C₃-C₆ cycloalkyl;

Each R³ independently is selected from:

10 H;

C₁-C₆ alkyl;

Substituted C₁-C₆ alkyl;

C₃-C₆ cycloalkyl;

Substituted C₃-C₆ cycloalkyl;

15 Phenyl-(C₁-C₆ alkylenyl);

Substituted phenyl-(C₁-C₆ alkylenyl);

Naphthyl-(C₁-C₆ alkylenyl);

Substituted naphthyl-(C₁-C₆ alkylenyl);

5-, 6-, 9-, and 10-membered heteroaryl-(C₁-C₆ alkylenyl);

20 Substituted 5-, 6-, 9-, and 10-membered heteroaryl-(C₁-C₆ alkylenyl);

Phenyl;

Substituted phenyl;

Naphthyl;

Substituted naphthyl;

25 5-, 6-, 9-, and 10-membered heteroaryl;

Substituted 5-, 6-, 9-, and 10-membered heteroaryl;

Each R⁴ independently is selected from:

H;

F;

30 CH₃;

CF₃;

C(O)H;

CN;
HO;
CH₃O;
C(F)H₂O;
5 C(H)F₂O; and
CF₃O;

t is an integer of 0 or 1;

V¹ is selected from:

a 5-membered heteroarylenyl;

10 CH₂C≡C;
CF₂C C≡C;
C(O)O;
C(S)O;
C(O)N(R⁵); and
15 C(S)N(R⁵);

Q, when bonded to a nitrogen atom in group D, is selected from:

OC(O);
CH(R⁶)C(O);
OC(NR⁶);
20 CH(R⁶)C(NR⁶);
N(R⁶)C(O);
N(R⁶)C(S);
N(R⁶)C(NR⁶);
SC(O);
25 CH(R⁶)C(S);
SC(NR⁶);
C≡CCH₂;
C≡CCF₂;

Q, when bonded to a carbon atom in group D, is as defined above and may further be selected from:

- OCH₂;
- 5 N(R⁶)CH₂;
- trans-(H)C=C(H);
- cis-(H)C=C(H);
- C≡C;
- CH₂C≡C; and
- 10 CF₂C≡C;

Each X independently is O, S, N(H), or N(C₁-C₆ alkyl);

Each V independently is C(H) or N;

Each R⁵ independently is H or C₁-C₆ alkyl;

R⁶ is H, C₁-C₆ alkyl, C₃-C₆ cycloalkyl; 3- to 6-membered heterocycloalkyl;

- 15 phenyl; benzyl; or 5- or 6-membered heteroaryl;

Each "substituted" group contains from 1 to 4 substituents, each independently on a carbon or nitrogen atom, independently selected from:

- C₁-C₆ alkyl;
- C₂-C₆ alkenyl;
- 20 C₂-C₆ alkynyl;
- C₃-C₆ cycloalkyl;
- C₃-C₆ cycloalkylmethyl;
- Phenyl;
- Phenylmethyl;
- 25 3- to 6-membered heterocycloalkyl;

- 3- to 6-membered heterocycloalkylmethyl;
cyano;
 CF_3 ;

(C₁-C₆ alkyl)₂-NS(O)₂;

(C₁-C₆ alkyl)-S(O)₂-N(H)-C(O)-(C₁-C₈ alkylenyl)_m; and

(C₁-C₆ alkyl)-C(O)-N(H)-S(O)₂-(C₁-C₈ alkylenyl)_m;

wherein each substituent on a carbon atom may further be independently selected
5 from:

Halo;

HO₂C; and

OCH₂O, wherein each O is bonded to adjacent carbon atoms to form a 5-membered ring;

10 wherein 2 substituents may be taken together with a carbon atom to which they are both bonded to form the group C=O;

wherein two adjacent, substantially sp² carbon atoms may be taken together with a diradical substituent to form a cyclic diradical selected from:

15

Each m independently is an integer of 0 or 1;

R is H or C₁-C₆ alkyl;
wherein each 5-membered heteroarylenyl independently is a 5-membered ring
containing carbon atoms and from 1 to 4 heteroatoms selected from 1 O, 1
S, 1 NH, 1 N(C₁-C₆ alkyl), and 4 N, wherein the O and S atoms are not
5 both present, and wherein the heteroarylenyl may optionally be
unsubstituted or substituted with 1 substituent selected from fluoro,
methyl, hydroxy, trifluoromethyl, cyano, and acetyl;
wherein each heterocycloalkyl is a ring that contains carbon atoms and 1 or 2
heteroatoms independently selected from 2 O, 1 S, 1 S(O), 1 S(O)₂, 1 N, 2
10 N(H), and 2 N(C₁-C₆ alkyl), and wherein when two O atoms or one O
atom and one S atom are present, the two O atoms or one O atom and one
S atom are not bonded to each other, and wherein the ring is saturated or
optionally contains one carbon-carbon or carbon-nitrogen double bond;
wherein each 5-membered heteroaryl contains carbon atoms and from 1 to 4
15 heteroatoms independently selected from 1 O, 1 S, 1 N(H), 1 N(C₁-C₆
alkyl), and 4 N, and each 6-membered heteroaryl contains carbon atoms
and 1 or 2 heteroatoms independently selected from N, N(H), and N(C₁-C₆
alkyl), and 5- and 6-membered heteroaryl are monocyclic rings; and 9- and
10-membered heteroaryl are 6,5-fused and 6,6-fused bicyclic rings,
20 respectively, wherein at least 1 of the 2 fused rings of a bicyclic ring is
aromatic, and wherein when the O and S atoms both are present, the O and
S atoms are not bonded to each other;
wherein with any (C₁-C₆ alkyl)₂-N group, the C₁-C₆ alkyl groups may be
optionally taken together with the nitrogen atom to which they are attached
25 to form a 5- or 6-membered heterocycloalkyl; and
wherein each group and each substituent recited above is independently selected.

34. The compound according to Embodiment 33, selected from:
4-[5-(5-Benzylcarbamoyl-6-oxo-6H-pyridazin-1-yl)-tetrazol-2-yl]-benzoic
30 acid;
4-(5-{6-Oxo-5-[(pyridin-4-ylmethyl)-carbamoyl]-6H-pyridazin-1-yl}-
tetrazol-2-yl)-benzoic acid;

- 4-[3-(5-Benzylcarbamoyl-6-oxo-6H-pyridazin-1-yl)-prop-2-ynyl]-benzoic acid;
- 4-(3-{6-Oxo-5-[(pyridin-4-ylmethyl)-carbamoyl]-6H-pyridazin-1-yl}-prop-2-ynyl)-benzoic acid;
- 5 4-{2-[6-Oxo-5-(3-phenyl-prop-1-ynyl)-6H-pyridazin-1-yl]-oxazol-5-yl}-benzoic acid;
- 4-{2-[5-(3-Imidazol-1-yl-prop-1-ynyl)-6-oxo-6H-pyridazin-1-yl]-oxazol-4-yl}-benzoic acid;
- 4-{3-[6-Oxo-5-(3-phenyl-prop-1-ynyl)-6H-pyridazin-1-yl]-prop-2-ynyl}-benzoic acid;
- 10 4-{3-[5-(3-Imidazol-1-yl-prop-1-ynyl)-6-oxo-6H-pyridazin-1-yl]-prop-2-ynyl}-benzoic acid;
- 4-({[6-Oxo-5-(5-phenyl-oxazol-2-yl)-6H-pyridazine-1-carbonyl]-amino}-methyl)-benzoic acid;
- 15 4-{3-[6-Oxo-5-(5-phenyl-oxazol-2-yl)-6H-pyridazin-1-yl]-prop-2-ynyl}-benzoic acid;
- 4-{5-[6-Oxo-5-(4-phenyl-oxazol-2-yl)-6H-pyridazin-1-yl]-tetrazol-2-yl}-benzoic acid; and
- 4-{3-[6-Oxo-5-(4-phenyl-oxazol-2-yl)-6H-pyridazin-1-yl]-prop-2-ynyl}-benzoic acid;
- 20 or a pharmaceutically acceptable salt thereof.

35. A compound of Formula IV

- 25 or a pharmaceutically acceptable salt thereof,
wherein:

R^1 and R^2 independently are selected from:

- C₁-C₆ alkyl;
Substituted C₁-C₆ alkyl;
C₂-C₆ alkenyl;
Substituted C₂-C₆ alkenyl;
- 5 C₂-C₆ alkynyl;
Substituted C₂-C₆ alkynyl;
C₃-C₆ cycloalkyl;
Substituted C₃-C₆ cycloalkyl;
C₃-C₆ cycloalkyl-(C₁-C₆ alkyl);
Substituted C₃-C₆ cycloalkyl-(C₁-C₆ alkyl);
3- to 6-membered heterocycloalkyl;
Substituted 3- to 6-membered heterocycloalkyl;
3- to 6-membered heterocycloalkyl-(C₁-C₆ alkyl);
Substituted 3- to 6-membered heterocycloalkyl-(C₁-C₆ alkyl);
- 10 15 Phenyl-(C₁-C₆ alkyl);
Substituted phenyl-(C₁-C₆ alkyl);
Naphthyl-(C₁-C₆ alkyl);
Substituted naphthyl-(C₁-C₆ alkyl);
5-, 6-, 9-, and 10-membered heteroaryl-(C₁-C₆ alkyl);
Substituted 5-, 6-, 9-, and 10-membered heteroaryl-(C₁-C₆ alkyl);
Phenyl;
Substituted phenyl;
Naphthyl;
Substituted naphthyl;
- 20 25 5-, 6-, 9-, and 10-membered heteroaryl;
Substituted 5-, 6-, 9-, and 10-membered heteroaryl;
R³O-(C₁-C₆ alkyl);
Substituted R³O-(C₁-C₆ alkyl);
Phenyl-O-(C₁-C₈ alkyl);
Substituted phenyl-O-(C₁-C₈ alkyl);
Phenyl-S-(C₁-C₈ alkyl);
Substituted phenyl-S-(C₁-C₈ alkyl);
- 30

Phenyl-S(O)-(C₁-C₈ alkylenyl);
Substituted phenyl-S(O)-(C₁-C₈ alkylenyl);
Phenyl-S(O)₂-(C₁-C₈ alkylenyl); and
Substituted phenyl-S(O)₂-(C₁-C₈ alkylenyl);

5 wherein R¹ and R² are not both selected from:

C₁-C₆ alkyl;
C₂-C₆ alkenyl;
C₂-C₆ alkynyl; and
C₃-C₆ cycloalkyl;

10 Each R³ independently is selected from:

H;
C₁-C₆ alkyl;
Substituted C₁-C₆ alkyl;
C₃-C₆ cycloalkyl;
Substituted C₃-C₆ cycloalkyl;
Phenyl-(C₁-C₆ alkylenyl);
Substituted phenyl-(C₁-C₆ alkylenyl);
Naphthyl-(C₁-C₆ alkylenyl);
Substituted naphthyl-(C₁-C₆ alkylenyl);

15 5-, 6-, 9-, and 10-membered heteroaryl-(C₁-C₆ alkylenyl);

Substituted 5-, 6-, 9-, and 10-membered heteroaryl-(C₁-C₆ alkylenyl);

Phenyl;

Substituted phenyl;

Naphthyl;

25 Substituted naphthyl;

5-, 6-, 9-, and 10-membered heteroaryl;

Substituted 5-, 6-, 9-, and 10-membered heteroaryl;

Each R⁴ independently is selected from:

H;

30 F;

CH₃;

CF₃;

- C(O)H;
CN;
HO;
CH₃O;
5 C(F)H₂O;
C(H)F₂O; and
CF₃O;

t is an integer of 0 or 1;

V¹ is selected from:

- 10 a 5-membered heteroarylenyl;
CH₂C≡C;
CF₂C C≡C;
C(O)O;
C(S)O;
15 C(O)N(R⁵); and
C(S)N(R⁵);

Q, when bonded to a nitrogen atom in group D, is selected from:

- OC(O);
CH(R⁶)C(O);
20 OC(NR⁶);
CH(R⁶)C(NR⁶);
N(R⁶)C(O);
N(R⁶)C(S);
N(R⁶)C(NR⁶);
25 SC(O);
CH(R⁶)C(S);
SC(NR⁶);
C≡CCH₂;
C≡CCF₂;

Q, when bonded to a carbon atom in group D, is as defined above and may further be selected from:

OCH₂;

5 N(R⁶)CH₂;

trans-(H)C=C(H);

cis-(H)C=C(H);

C≡C;

CH₂C≡C; and

10 CF₂C≡C;

Each X independently is O, S, N(H), or N(C₁-C₆ alkyl);

Each V independently is C(H) or N;

Each R⁵ independently is H or C₁-C₆ alkyl;

R⁶ is H, C₁-C₆ alkyl, C₃-C₆ cycloalkyl; 3- to 6-membered heterocycloalkyl;

15 phenyl; benzyl; or 5- or 6-membered heteroaryl;

Each "substituted" group contains from 1 to 4 substituents, each independently on a carbon or nitrogen atom, independently selected from:

C₁-C₆ alkyl;

C₂-C₆ alkenyl;

20 C₂-C₆ alkynyl;

C₃-C₆ cycloalkyl;

C₃-C₆ cycloalkylmethyl;

Phenyl;

Phenylmethyl;

25 3- to 6-membered heterocycloalkyl;

- 3- to 6-membered heterocycloalkylmethyl;
cyano;
 CF_3 ;
 $(\text{C}_1\text{-}\text{C}_6 \text{ alkyl})\text{-OC(O)}$;
5 HOCH_2 ;
 $(\text{C}_1\text{-}\text{C}_6 \text{ alkyl})\text{-OCH}_2$;
 H_2NCH_2 ;
 $(\text{C}_1\text{-}\text{C}_6 \text{ alkyl})\text{-N(H)CH}_2$;

(C₁-C₆ alkyl)₂-NS(O)₂;

(C₁-C₆ alkyl)-S(O)₂-N(H)-C(O)-(C₁-C₈ alkylene)_m; and

(C₁-C₆ alkyl)-C(O)-N(H)-S(O)₂-(C₁-C₈ alkylene)_m;

wherein each substituent on a carbon atom may further be independently selected

5 from:

Halo;

HO₂C; and

OCH₂O, wherein each O is bonded to adjacent carbon atoms to form a 5-membered ring;

10 wherein 2 substituents may be taken together with a carbon atom to which they are both bonded to form the group C=O;

wherein two adjacent, substantially sp² carbon atoms may be taken together with a diradical substituent to form a cyclic diradical selected from:

15

Each m independently is an integer of 0 or 1;

R is H or C₁-C₆ alkyl;

wherein each 5-membered heteroarylenyl independently is a 5-membered ring containing carbon atoms and from 1 to 4 heteroatoms selected from 1 O, 1 S, 1 NH, 1 N(C₁-C₆ alkyl), and 4 N, wherein the O and S atoms are not

5 both present, and wherein the heteroarylenyl may optionally be unsubstituted or substituted with 1 substituent selected from fluoro, methyl, hydroxy, trifluoromethyl, cyano, and acetyl;

wherein each heterocycloalkyl is a ring that contains carbon atoms and 1 or 2 heteroatoms independently selected from 2 O, 1 S, 1 S(O), 1 S(O)₂, 1 N, 2

10 N(H), and 2 N(C₁-C₆ alkyl), and wherein when two O atoms or one O atom and one S atom are present, the two O atoms or one O atom and one S atom are not bonded to each other, and wherein the ring is saturated or optionally contains one carbon-carbon or carbon-nitrogen double bond;

wherein each 5-membered heteroaryl contains carbon atoms and from 1 to 4

15 heteroatoms independently selected from 1 O, 1 S, 1 N(H), 1 N(C₁-C₆ alkyl), and 4 N, and each 6-membered heteroaryl contains carbon atoms and 1 or 2 heteroatoms independently selected from N, N(H), and N(C₁-C₆ alkyl), and 5- and 6-membered heteroaryl are monocyclic rings; and 9- and 10-membered heteroaryl are 6,5-fused and 6,6-fused bicyclic rings,

20 respectively, wherein at least 1 of the 2 fused rings of a bicyclic ring is aromatic, and wherein when the O and S atoms both are present, the O and S atoms are not bonded to each other;

wherein with any (C₁-C₆ alkyl)₂-N group, the C₁-C₆ alkyl groups may be optionally taken together with the nitrogen atom to which they are attached

25 to form a 5- or 6-membered heterocycloalkyl; and

wherein each group and each substituent recited above is independently selected.

36. The compound according to Embodiment 35, selected from:

4-[5-(5-Benzylcarbamoyl-3,6-dioxo-3,6-dihydro-2H-pyrazin-1-yl)-
30 tetrazol-2-yl]-benzoic acid;

4-(5-{3,6-Dioxo-5-[(pyridin-4-ylmethyl)-carbamoyl]-3,6-dihydro-2H-
pyrazin-1-yl}-tetrazol-2-yl)-benzoic acid;

- 4-[3-(5-Benzylcarbamoyl-3,6-dioxo-3,6-dihydro-2H-pyrazin-1-yl)-prop-2-ynyl]-benzoic acid;
- 4-(3-{3,6-Dioxo-5-[(pyridin-4-ylmethyl)-carbamoyl]-3,6-dihydro-2H-pyrazin-1-yl}-prop-2-ynyl)-benzoic acid;
- 5 4-{2-[3,6-Dioxo-5-(3-phenyl-prop-1-ynyl)-3,6-dihydro-2H-pyrazin-1-yl]-oxazol-5-yl}-benzoic acid;
- 4-{2-[5-(3-Imidazol-1-yl-prop-1-ynyl)-3,6-dioxo-3,6-dihydro-2H-pyrazin-1-yl]-oxazol-4-yl}-benzoic acid;
- 4-{3-[3,6-Dioxo-5-(3-phenyl-prop-1-ynyl)-3,6-dihydro-2H-pyrazin-1-yl]-prop-2-ynyl}-benzoic acid;
- 10 4-{3-[5-(3-Imidazol-1-yl-prop-1-ynyl)-3,6-dioxo-3,6-dihydro-2H-pyrazin-1-yl]-prop-2-ynyl}-benzoic acid;
- 4-{3-[5-(3-Imidazol-1-yl-prop-1-ynyl)-3,6-dioxo-3,6-dihydro-2H-pyrazin-1-yl]-prop-2-ynyl}-benzoic acid;
- 4-({[3,6-Dioxo-5-(5-phenyl-oxazol-2-yl)-3,6-dihydro-2H-pyrazine-1-carbonyl]-amino}-methyl)-benzoic acid;
- 15 4-{3-[3,6-Dioxo-5-(5-phenyl-oxazol-2-yl)-3,6-dihydro-2H-pyrazin-1-yl]-prop-2-ynyl}-benzoic acid;
- 4-[5-(3,6-Dioxo-5-styryloxycarbonimidoyl-3,6-dihydro-2H-pyrazin-1-yl)-tetrazol-2-yl]-benzoic acid; and
- 4-{3-[3,6-Dioxo-5-(4-phenyl-oxazol-2-yl)-3,6-dihydro-2H-pyrazin-1-yl]-prop-2-ynyl}-benzoic acid;
- 20 or a pharmaceutically acceptable salt thereof.

37. A compound of Formula V

- 25 or a pharmaceutically acceptable salt thereof,
wherein:

R¹ and R² independently are selected from:

C₁-C₆ alkyl;

Substituted C₁-C₆ alkyl;

- C₂-C₆ alkenyl;
Substituted C₂-C₆ alkenyl;
C₂-C₆ alkynyl;
Substituted C₂-C₆ alkynyl;
- 5 C₃-C₆ cycloalkyl;
Substituted C₃-C₆ cycloalkyl;
C₃-C₆ cycloalkyl-(C₁-C₆ alkyl);
Substituted C₃-C₆ cycloalkyl-(C₁-C₆ alkyl);
3- to 6-membered heterocycloalkyl;
- 10 Substituted 3- to 6-membered heterocycloalkyl;
3- to 6-membered heterocycloalkyl-(C₁-C₆ alkyl);
Substituted 3- to 6-membered heterocycloalkyl-(C₁-C₆ alkyl);
Phenyl-(C₁-C₆ alkyl);
Substituted phenyl-(C₁-C₆ alkyl);
- 15 Naphthyl-(C₁-C₆ alkyl);
Substituted naphthyl-(C₁-C₆ alkyl);
5-, 6-, 9-, and 10-membered heteroaryl-(C₁-C₆ alkyl);
Substituted 5-, 6-, 9-, and 10-membered heteroaryl-(C₁-C₆ alkyl);
Phenyl;
- 20 Substituted phenyl;
Naphthyl;
Substituted naphthyl;
5-, 6-, 9-, and 10-membered heteroaryl;
Substituted 5-, 6-, 9-, and 10-membered heteroaryl;
- 25 R³O-(C₁-C₆ alkyl);
Substituted R³O-(C₁-C₆ alkyl);
Phenyl-O-(C₁-C₈ alkyl);
Substituted phenyl-O-(C₁-C₈ alkyl);
Phenyl-S-(C₁-C₈ alkyl);
- 30 Substituted phenyl-S-(C₁-C₈ alkyl);
Phenyl-S(O)-(C₁-C₈ alkyl);
Substituted phenyl-S(O)-(C₁-C₈ alkyl);

Phenyl-S(O)₂-(C₁-C₈ alkylenyl); and

Substituted phenyl-S(O)₂-(C₁-C₈ alkylenyl);

wherein R¹ and R² are not both selected from:

C₁-C₆ alkyl;

5 C₂-C₆ alkenyl;

C₂-C₆ alkynyl; and

C₃-C₆ cycloalkyl;

Each R³ independently is selected from:

H;

10 C₁-C₆ alkyl;

Substituted C₁-C₆ alkyl;

C₃-C₆ cycloalkyl;

Substituted C₃-C₆ cycloalkyl;

Phenyl-(C₁-C₆ alkylenyl);

15 Substituted phenyl-(C₁-C₆ alkylenyl);

Naphthyl-(C₁-C₆ alkylenyl);

Substituted naphthyl-(C₁-C₆ alkylenyl);

5-, 6-, 9-, and 10-membered heteroaryl-(C₁-C₆ alkylenyl);

Substituted 5-, 6-, 9-, and 10-membered heteroaryl-(C₁-C₆ alkylenyl);

20 Phenyl;

Substituted phenyl;

Naphthyl;

Substituted naphthyl;

5-, 6-, 9-, and 10-membered heteroaryl;

25 Substituted 5-, 6-, 9-, and 10-membered heteroaryl;

Each R⁴ independently is selected from:

H;

F;

CH₃;

30 CF₃;

C(O)H;

CN;

HO;
CH₃O;
C(F)H₂O;
C(H)F₂O; and
5 CF₃O;

t is an integer of 0 or 1;

V¹ is selected from:

a 5-membered heteroarylenyl;

CH₂C≡C;

10 CF₂C C≡C;

C(O)O;

C(S)O;

C(O)N(R⁵); and

C(S)N(R⁵);

15 Q, when bonded to a nitrogen atom in group D, is selected from:

OC(O);

CH(R⁶)C(O);

OC(NR⁶);

CH(R⁶)C(NR⁶);

20 N(R⁶)C(O);

N(R⁶)C(S);

N(R⁶)C(NR⁶);

SC(O);

CH(R⁶)C(S);

25 SC(NR⁶);

C≡CCH₂;

C≡CCF₂;

Q, when bonded to a carbon atom in group D, is as defined above and may further be selected from:

- 5 OCH₂;
 N(R⁶)CH₂;
 trans-(H)C=C(H);
 cis-(H)C=C(H);
 C≡C;
 CH₂C≡C; and
10 CF₂C≡C;
- Each X independently is O, S, N(H), or N(C₁-C₆ alkyl);
Each V independently is C(H) or N;
Each R⁵ independently is H or C₁-C₆ alkyl;
R⁶ is H, C₁-C₆ alkyl, C₃-C₆ cycloalkyl; 3- to 6-membered heterocycloalkyl;
15 phenyl; benzyl; or 5- or 6-membered heteroaryl;
Each “substituted” group contains from 1 to 4 substituents, each independently on a carbon or nitrogen atom, independently selected from:
C₁-C₆ alkyl;
C₂-C₆ alkenyl;
20 C₂-C₆ alkynyl;
 C₃-C₆ cycloalkyl;
 C₃-C₆ cycloalkylmethyl;
 Phenyl;
 Phenylmethyl;
25 3- to 6-membered heterocycloalkyl;

3- to 6-membered heterocycloalkylmethyl;
cyano;
 CF_3 ;
 $(\text{C}_1\text{-}\text{C}_6 \text{ alkyl})\text{-OC(O)}$;
5 HOCH_2 ;
 $(\text{C}_1\text{-}\text{C}_6 \text{ alkyl})\text{-OCH}_2$;
 H_2NCH_2 ;
 $(\text{C}_1\text{-}\text{C}_6 \text{ alkyl})\text{-N(H)CH}_2$;
 $(\text{C}_1\text{-}\text{C}_6 \text{ alkyl})_2\text{-NCH}_2$;
10 $\text{N(H)}_2\text{C(O)}$;
 $(\text{C}_1\text{-}\text{C}_6 \text{ alkyl})\text{-N(H)C(O)}$;
 $(\text{C}_1\text{-}\text{C}_6 \text{ alkyl})_2\text{-NC(O)}$;
 $\text{N(H)}_2\text{C(O)N(H)}$;
 $(\text{C}_1\text{-}\text{C}_6 \text{ alkyl})\text{-N(H)C(O)N(H)}$;
15 $\text{N(H)}_2\text{C(O)N(C}_1\text{-}\text{C}_6 \text{ alkyl)}$;
 $(\text{C}_1\text{-}\text{C}_6 \text{ alkyl})\text{-N(H)C(O)N(C}_1\text{-}\text{C}_6 \text{ alkyl)}$;
 $(\text{C}_1\text{-}\text{C}_6 \text{ alkyl})_2\text{-NC(O)N(H)}$;
 $(\text{C}_1\text{-}\text{C}_6 \text{ alkyl})_2\text{-NC(O)N(C}_1\text{-}\text{C}_6 \text{ alkyl)}$;

 $(\text{C}_1\text{-}\text{C}_6 \text{ alkyl})\text{-S(O)}_2$;

(C₁-C₆ alkyl)₂-NS(O)₂;

(C₁-C₆ alkyl)-S(O)₂-N(H)-C(O)-(C₁-C₈ alkyleneyl)_m; and

(C₁-C₆ alkyl)-C(O)-N(H)-S(O)₂-(C₁-C₈ alkyleneyl)_m;

wherein each substituent on a carbon atom may further be independently selected

5 from:

Halo;

HO₂C; and

OCH₂O, wherein each O is bonded to adjacent carbon atoms to form a 5-membered ring;

10 wherein 2 substituents may be taken together with a carbon atom to which they are both bonded to form the group C=O;

wherein two adjacent, substantially sp² carbon atoms may be taken together with a diradical substituent to form a cyclic diradical selected from:

15

Each m independently is an integer of 0 or 1;

R is H or C₁-C₆ alkyl;
wherein each 5-membered heteroarylenyl independently is a 5-membered ring
containing carbon atoms and from 1 to 4 heteroatoms selected from 1 O, 1
S, 1 NH, 1 N(C₁-C₆ alkyl), and 4 N, wherein the O and S atoms are not
5 both present, and wherein the heteroarylenyl may optionally be
unsubstituted or substituted with 1 substituent selected from fluoro,
methyl, hydroxy, trifluoromethyl, cyano, and acetyl;
wherein each heterocycloalkyl is a ring that contains carbon atoms and 1 or 2
heteroatoms independently selected from 2 O, 1 S, 1 S(O), 1 S(O)₂, 1 N, 2
10 N(H), and 2 N(C₁-C₆ alkyl), and wherein when two O atoms or one O
atom and one S atom are present, the two O atoms or one O atom and one
S atom are not bonded to each other, and wherein the ring is saturated or
optionally contains one carbon-carbon or carbon-nitrogen double bond;
wherein each 5-membered heteroaryl contains carbon atoms and from 1 to 4
15 heteroatoms independently selected from 1 O, 1 S, 1 N(H), 1 N(C₁-C₆
alkyl), and 4 N, and each 6-membered heteroaryl contains carbon atoms
and 1 or 2 heteroatoms independently selected from N, N(H), and N(C₁-C₆
alkyl), and 5- and 6-membered heteroaryl are monocyclic rings; and 9- and
10-membered heteroaryl are 6,5-fused and 6,6-fused bicyclic rings,
20 respectively, wherein at least 1 of the 2 fused rings of a bicyclic ring is
aromatic, and wherein when the O and S atoms both are present, the O and
S atoms are not bonded to each other;
wherein with any (C₁-C₆ alkyl)₂-N group, the C₁-C₆ alkyl groups may be
optionally taken together with the nitrogen atom to which they are attached
25 to form a 5- or 6-membered heterocycloalkyl; and
wherein each group and each substituent recited above is independently selected.

38. The compound according to Embodiment 37, selected from:
4-[5-(6-Benzylcarbamoyl-1,1,3-trioxo-3,6-dihydro-1H-1λ⁶-
30 [1,2,6]thiadiazin-2-yl)-tetrazol-2-yl]-benzoic acid;
4-(5-{1,1,3-Trioxo-6-[(pyridin-4-ylmethyl)-carbamoyl]-3,6-dihydro-1H-
1λ⁶-[1,2,6]thiadiazin-2-yl}-tetrazol-2-yl)-benzoic acid;

- 4-[3-(6-Benzylcarbamoyl-1,1,3-trioxo-3,6-dihydro-1H-1 λ ⁶-[1,2,6]thiadiazin-2-yl)-prop-2-ynyl]-benzoic acid;
- 4-(3-{1,1,3-Trioxo-6-[(pyridin-4-ylmethyl)-carbamoyl]-3,6-dihydro-1H-1 λ ⁶-[1,2,6]thiadiazin-2-yl}-prop-2-ynyl)-benzoic acid;
- 5 4-{2-[1,1,3-Trioxo-6-(3-phenyl-prop-1-ynyl)-3,6-dihydro-1H-1 λ ⁶-[1,2,6]thiadiazin-2-yl]-oxazol-5-yl}-benzoic acid;
- 4-{2-[6-(3-Imidazol-1-yl-prop-1-ynyl)-1,1,3-trioxo-3,6-dihydro-1H-1 λ ⁶-[1,2,6]thiadiazin-2-yl]-oxazol-4-yl}-benzoic acid;
- 4-{3-[1,1,3-Trioxo-6-(3-phenyl-prop-1-ynyl)-3,6-dihydro-1H-1 λ ⁶-[1,2,6]thiadiazin-2-yl]-prop-2-ynyl}-benzoic acid;
- 10 4-{3-[6-(3-Imidazol-1-yl-prop-1-ynyl)-1,1,3-trioxo-3,6-dihydro-1H-1 λ ⁶-[1,2,6]thiadiazin-2-yl]-prop-2-ynyl}-benzoic acid;
- 4-({[1,1,3-Trioxo-6-(5-phenyl-oxazol-2-yl)-3,6-dihydro-1H-1 λ ⁶-[1,2,6]thiadiazine-2-carbonyl]-amino}-methyl)-benzoic acid;
- 15 4-{3-[1,1,3-Trioxo-6-(5-phenyl-oxazol-2-yl)-3,6-dihydro-1H-1 λ ⁶-[1,2,6]thiadiazin-2-yl]-prop-2-ynyl}-benzoic acid;
- 4-{5-[1,1,3-Trioxo-6-(4-phenyl-oxazol-2-yl)-3,6-dihydro-1H-1 λ ⁶-[1,2,6]thiadiazin-2-yl]-tetrazol-2-yl}-benzoic acid; and
- 4-{3-[1,1,3-Trioxo-6-(4-phenyl-oxazol-2-yl)-3,6-dihydro-1H-1 λ ⁶-[1,2,6]thiadiazin-2-yl]-prop-2-ynyl}-benzoic acid;
- 20 or a pharmaceutically acceptable salt thereof.

39. A compound of Formula VI

VI

- 25 or a pharmaceutically acceptable salt thereof,
wherein:
R¹ and R² independently are selected from:
C₁-C₆ alkyl;

- Substituted C₁-C₆ alkyl;
C₂-C₆ alkenyl;
Substituted C₂-C₆ alkenyl;
C₂-C₆ alkynyl;
5 Substituted C₂-C₆ alkynyl;
C₃-C₆ cycloalkyl;
Substituted C₃-C₆ cycloalkyl;
C₃-C₆ cycloalkyl-(C₁-C₆ alkylene);
Substituted C₃-C₆ cycloalkyl-(C₁-C₆ alkylene);
10 3- to 6-membered heterocycloalkyl;
Substituted 3- to 6-membered heterocycloalkyl;
3- to 6-membered heterocycloalkyl-(C₁-C₆ alkylene);
Substituted 3- to 6-membered heterocycloalkyl-(C₁-C₆ alkylene);
Phenyl-(C₁-C₆ alkylene);
15 Substituted phenyl-(C₁-C₆ alkylene);
Naphthyl-(C₁-C₆ alkylene);
Substituted naphthyl-(C₁-C₆ alkylene);
5-, 6-, 9-, and 10-membered heteroaryl-(C₁-C₆ alkylene);
Substituted 5-, 6-, 9-, and 10-membered heteroaryl-(C₁-C₆ alkylene);
20 Phenyl;
Substituted phenyl;
Naphthyl;
Substituted naphthyl;
5-, 6-, 9-, and 10-membered heteroaryl;
25 Substituted 5-, 6-, 9-, and 10-membered heteroaryl;
R³O-(C₁-C₆ alkylene);
Substituted R³O-(C₁-C₆ alkylene);
Phenyl-O-(C₁-C₈ alkylene);
Substituted phenyl-O-(C₁-C₈ alkylene);
30 Phenyl-S-(C₁-C₈ alkylene);
Substituted phenyl-S-(C₁-C₈ alkylene);
Phenyl-S(O)-(C₁-C₈ alkylene);

Substituted phenyl-S(O)-(C₁-C₈ alkylene);

Phenyl-S(O)₂-(C₁-C₈ alkylene); and

Substituted phenyl-S(O)₂-(C₁-C₈ alkylene);

wherein R¹ and R² are not both selected from:

5 C₁-C₆ alkyl;

C₂-C₆ alkenyl;

C₂-C₆ alkynyl; and

C₃-C₆ cycloalkyl;

Each R³ independently is selected from:

10 H;

C₁-C₆ alkyl;

Substituted C₁-C₆ alkyl;

C₃-C₆ cycloalkyl;

Substituted C₃-C₆ cycloalkyl;

15 Phenyl-(C₁-C₆ alkylene);

Substituted phenyl-(C₁-C₆ alkylene);

Naphthyl-(C₁-C₆ alkylene);

Substituted naphthyl-(C₁-C₆ alkylene);

5-, 6-, 9-, and 10-membered heteroaryl-(C₁-C₆ alkylene);

20 Substituted 5-, 6-, 9-, and 10-membered heteroaryl-(C₁-C₆ alkylene);

Phenyl;

Substituted phenyl;

Naphthyl;

Substituted naphthyl;

25 5-, 6-, 9-, and 10-membered heteroaryl;

Substituted 5-, 6-, 9-, and 10-membered heteroaryl;

Each R⁴ independently is selected from:

H;

F;

30 CH₃;

CF₃;

C(O)H;

CN;
HO;
CH₃O;
C(F)H₂O;
5 C(H)F₂O; and
CF₃O;

t is an integer of 0 or 1;

V¹ is selected from:

a 5-membered heteroarylenyl;
10 CH₂C≡C;
CF₂C C≡C;
C(O)O;
C(S)O;
C(O)N(R⁵); and
15 C(S)N(R⁵);

Q, when bonded to a nitrogen atom in group D, is selected from:

OC(O);
CH(R⁶)C(O);
OC(NR⁶);
20 CH(R⁶)C(NR⁶);
N(R⁶)C(O);
N(R⁶)C(S);
N(R⁶)C(NR⁶);
SC(O);
25 CH(R⁶)C(S);
SC(NR⁶);
C≡CCH₂;
C≡CCF₂;

Q, when bonded to a carbon atom in group D, is as defined above and may further be selected from:

OCH₂;

5 N(R⁶)CH₂;

trans-(H)C=C(H);

cis-(H)C=C(H);

C≡C;

CH₂C≡C; and

10 CF₂C≡C;

Each X independently is O, S, N(H), or N(C₁-C₆ alkyl);

Each V independently is C(H) or N;

Each R⁵ independently is H or C₁-C₆ alkyl;

R⁶ is H, C₁-C₆ alkyl, C₃-C₆ cycloalkyl; 3- to 6-membered heterocycloalkyl;

15 phenyl; benzyl; or 5- or 6-membered heteroaryl;

Each "substituted" group contains from 1 to 4 substituents, each independently on a carbon or nitrogen atom, independently selected from:

C₁-C₆ alkyl;

C₂-C₆ alkenyl;

20 C₂-C₆ alkynyl;

C₃-C₆ cycloalkyl;

C₃-C₆ cycloalkylmethyl;

Phenyl;

Phenylmethyl;

25 3- to 6-membered heterocycloalkyl;

- 3- to 6-membered heterocycloalkylmethyli;
cyano;
 CF_3 ;
 $(\text{C}_1\text{-}\text{C}_6 \text{ alkyl})\text{-OC(O)}$;
5 HOCH_2 ;
 $(\text{C}_1\text{-}\text{C}_6 \text{ alkyl})\text{-OCH}_2$;
 H_2NCH_2 ;

(C₁-C₆ alkyl)₂-NS(O)₂;

(C₁-C₆ alkyl)-S(O)₂-N(H)-C(O)-(C₁-C₈ alkyleneyl)_m; and

(C₁-C₆ alkyl)-C(O)-N(H)-S(O)₂-(C₁-C₈ alkyleneyl)_m;

wherein each substituent on a carbon atom may further be independently selected

5 from:

Halo;

HO₂C; and

OCH₂O, wherein each O is bonded to adjacent carbon atoms to form a 5-membered ring;

10 wherein 2 substituents may be taken together with a carbon atom to which they are both bonded to form the group C=O;

wherein two adjacent, substantially sp² carbon atoms may be taken together with a diradical substituent to form a cyclic diradical selected from:

Each m independently is an integer of 0 or 1;

R is H or C₁-C₆ alkyl;

wherein each 5-membered heteroarylenyl independently is a 5-membered ring containing carbon atoms and from 1 to 4 heteroatoms selected from 1 O, 1 S, 1 NH, 1 N(C₁-C₆ alkyl), and 4 N, wherein the O and S atoms are not

5 both present, and wherein the heteroarylenyl may optionally be unsubstituted or substituted with 1 substituent selected from fluoro, methyl, hydroxy, trifluoromethyl, cyano, and acetyl;

wherein each heterocycloalkyl is a ring that contains carbon atoms and 1 or 2 heteroatoms independently selected from 2 O, 1 S, 1 S(O), 1 S(O)₂, 1 N, 2

10 N(H), and 2 N(C₁-C₆ alkyl), and wherein when two O atoms or one O atom and one S atom are present, the two O atoms or one O atom and one S atom are not bonded to each other, and wherein the ring is saturated or optionally contains one carbon-carbon or carbon-nitrogen double bond;

wherein each 5-membered heteroaryl contains carbon atoms and from 1 to 4

15 heteroatoms independently selected from 1 O, 1 S, 1 N(H), 1 N(C₁-C₆ alkyl), and 4 N, and each 6-membered heteroaryl contains carbon atoms and 1 or 2 heteroatoms independently selected from N, N(H), and N(C₁-C₆ alkyl), and 5- and 6-membered heteroaryl are monocyclic rings; and 9- and 10-membered heteroaryl are 6,5-fused and 6,6-fused bicyclic rings,

20 respectively, wherein at least 1 of the 2 fused rings of a bicyclic ring is aromatic, and wherein when the O and S atoms both are present, the O and S atoms are not bonded to each other;

wherein with any (C₁-C₆ alkyl)₂-N group, the C₁-C₆ alkyl groups may be optionally taken together with the nitrogen atom to which they are attached

25 to form a 5- or 6-membered heterocycloalkyl; and

wherein each group and each substituent recited above is independently selected.

40. The compound according to Embodiment 39, selected from:

30 4-[5-(1-Benzylcarbamoyl-6-oxo-1,6-dihydro-pyridazin-3-yl)-tetrazol-2-yl]-benzoic acid;

4-(5-{6-Oxo-1-[(pyridin-4-ylmethyl)-carbamoyl]-1,6-dihydro-pyridazin-3-yl}-tetrazol-2-yl)-benzoic acid;

4-[3-(1-Benzylcarbamoyl-6-oxo-1,6-dihydro-pyridazin-3-yl)-prop-2-ynyl]-
benzoic acid;
4-(3-{6-Oxo-1-[(pyridin-4-ylmethyl)-carbamoyl]-1,6-dihydro-pyridazin-3-
yl}-prop-2-ynyl)-benzoic acid;
5 4-{2-[6-Oxo-1-(3-phenyl-prop-1-ynyl)-1,6-dihydro-pyridazin-3-yl]-
oxazol-5-yl}-benzoic acid;
4-{2-[1-(3-Imidazol-1-yl-prop-1-ynyl)-6-oxo-1,6-dihydro-pyridazin-3-yl]-
oxazol-4-yl}-benzoic acid;
4-{3-[6-Oxo-1-(3-phenyl-prop-1-ynyl)-1,6-dihydro-pyridazin-3-yl]-prop-
10 2-ynyl}-benzoic acid;
4-{3-[1-(3-Imidazol-1-yl-prop-1-ynyl)-6-oxo-1,6-dihydro-pyridazin-3-yl]-
prop-2-ynyl}-benzoic acid;
4-({[6-Oxo-1-(5-phenyl-oxazol-2-yl)-1,6-dihydro-pyridazine-3-carbonyl]-
amino}-methyl)-benzoic acid;
15 4-{3-[6-Oxo-1-(5-phenyl-oxazol-2-yl)-1,6-dihydro-pyridazin-3-yl]-prop-2-
ynyl}-benzoic acid;
4-{5-[6-Oxo-1-(4-phenyl-oxazol-2-yl)-1,6-dihydro-pyridazin-3-yl]-
tetrazol-2-yl}-benzoic acid; and
4-{3-[6-Oxo-1-(4-phenyl-oxazol-2-yl)-1,6-dihydro-pyridazin-3-yl]-prop-2-
20 2-ynyl}-benzoic acid;
or a pharmaceutically acceptable salt thereof.

41. The compound according to any one of Embodiments 31, 33, 35, 37, and
39, or a pharmaceutically acceptable salt thereof, wherein Q is OC(O).
- 25 42. The compound according to any one of Embodiments 31, 33, 35, 37, and
39, or a pharmaceutically acceptable salt thereof, wherein Q is OCH₂.
43. The compound according to any one of Embodiments 31, 33, 35, 37, and
30 39, or a pharmaceutically acceptable salt thereof, wherein Q is N(R⁶)C(O).
44. The compound according to any one of Embodiments 31, 33, 35, 37, and
39, or a pharmaceutically acceptable salt thereof, wherein Q is N(H)C(O).

45. The compound according to any one of Embodiments 31, 33, 35, 37, and 39, or a pharmaceutically acceptable salt thereof, wherein Q is N(R⁶)CH₂.
- 5 46. The compound according to any one of Embodiments 31, 33, 35, 37, and 39, or a pharmaceutically acceptable salt thereof, wherein Q is N(H)CH₂.
47. The compound according to any one of Embodiments 31, 33, 35, 37, and 39, or a pharmaceutically acceptable salt thereof, wherein Q is N(CH₃)CH₂.
- 10 48. The compound according to any one of Embodiments 31, 33, 35, 37, and 39, or a pharmaceutically acceptable salt thereof, wherein Q is C≡C, CH₂C≡C, C≡CCH₂, CF₂C≡C, or C≡CCF₂.
- 15 49. The compound according to any one of Embodiments 31, 33, 35, 37, 39, and 41 to 48, or a pharmaceutically acceptable salt thereof, wherein at least one of R¹ and R² is independently selected from:
Phenyl-(C₁-C₆ alkylene); and
Substituted phenyl-(C₁-C₆ alkylene);
20 wherein each group and each substituent is independently selected.
50. The compound according to any one of Embodiments 31, 33, 35, 37, 39, and 41 to 48, or a pharmaceutically acceptable salt thereof, wherein each of R¹ and R² are independently selected from:
Phenyl-(C₁-C₆ alkylene); and
Substituted phenyl-(C₁-C₆ alkylene);
25 wherein each group and each substituent is independently selected.
51. The compound according to any one of Embodiments 31, 33, 35, 37, 39, and 41 to 48, or a pharmaceutically acceptable salt thereof, wherein at least one of R¹ and R² is independently selected from:
5-, 6-, 9-, and 10-membered heteroaryl-(C₁-C₆ alkylene); and
Substituted 5-, 6-, 9-, and 10-membered heteroaryl-(C₁-C₆ alkylene);
30

- wherein each heteroaryl contains carbon atoms and from 1 to 4 heteroatoms independently selected from 1 O, 1 S, 1 N(H), 1 N(C₁-C₆ alkyl), and 4 N, and 5- and 6-membered heteroaryl are monocyclic rings and 9- and 10-membered heteroaryl are 6,5-fused and 6,6-fused bicyclic rings,
5 respectively, wherein at least 1 of the 2 fused rings of a bicyclic ring is aromatic, and wherein when the O and S atoms both are present, the O and S atoms are not bonded to each other; and
wherein each group and each substituent is independently selected.
- 10 52. The compound according to any one of Embodiments 31, 33, 35, 37, 39, and 41 to 48, or a pharmaceutically acceptable salt thereof, wherein each of R¹ and R² is independently selected from:
5-, 6-, 9-, and 10-membered heteroaryl-(C₁-C₆ alkylene); and
Substituted 5-, 6-, 9-, and 10-membered heteroaryl-(C₁-C₆ alkylene);
15 wherein each heteroaryl contains carbon atoms and from 1 to 4 heteroatoms independently selected from 1 O, 1 S, 1 N(H), 1 N(C₁-C₆ alkyl), and 4 N, and 5- and 6-membered heteroaryl are monocyclic rings and 9- and 10-membered heteroaryl are 6,5-fused and 6,6-fused bicyclic rings, respectively, wherein at least 1 of the 2 fused rings of a bicyclic ring is aromatic, and wherein when the O and S atoms both are present, the O and S atoms are not bonded to each other; and
20 wherein each group and each substituent is independently selected.
53. The compound according to any one of Embodiments 31, 33, 35, 37, 39, 25 41 to 48, 51, and 52, or a pharmaceutically acceptable salt thereof, wherein at least one of R¹ and R² is independently selected from:
5-, 6-, and 9-membered heteroaryl-(C₁-C₆ alkylene); and
Substituted 5-, 6-, 9-membered heteroaryl-(C₁-C₆ alkylene);
wherein each heteroaryl contains carbon atoms and from 1 to 4 heteroatoms
30 independently selected from 1 O, 1 S, 1 N(H), 1 N(C₁-C₆ alkyl), and 4 N, and 5- and 6-membered heteroaryl are monocyclic rings and 9-membered heteroaryl is 6,5-fused bicyclic ring, wherein at least 1 of the 2 fused rings

of a bicyclic ring is aromatic, and wherein when the O and S atoms both are present, the O and S atoms are not bonded to each other; and wherein each group and each substituent is independently selected.

5 54. The compound according to any one of Embodiments 31, 33, 35, 37, 39, and 41 to 48, or a pharmaceutically acceptable salt thereof, wherein at least one of R¹ and R² is independently selected from:

3- to 6-membered heterocycloalkyl-(C₁-C₆ alkyl); and

Substituted 3- to 6-membered heterocycloalkyl-(C₁-C₆ alkyl);

10 wherein each heterocycloalkyl is a ring that contains carbon atoms and 1 or 2 heteroatoms independently selected from 2 O, 1 S, 1 S(O), 1 S(O)₂, 1 N, 2 N(H), and 2 N(C₁-C₆ alkyl), and wherein when two O atoms or one O atom and one S atom are present, the two O atoms or one O atom and one S atom are not bonded to each other, and wherein the ring is saturated or 15 optionally contains one carbon-carbon or carbon-nitrogen double bond; and

wherein each group and each substituent recited above is independently selected.

20 55. The compound according to any one of Embodiments 31, 33, 35, 37, 39, and 41 to 48, or a pharmaceutically acceptable salt thereof, wherein one of R¹ and R² is independently selected from:

C₂-C₆ alkenyl; and

Substituted C₂-C₆ alkenyl.

25 56. The compound according to any one of Embodiments 31, 33, 35, 37, 39, and 41 to 48, or a pharmaceutically acceptable salt thereof, wherein one of R¹ and R² is independently selected from:

C₁-C₆ alkyl; and

Substituted C₁-C₆ alkyl.

30 57. The compound according to any one of Embodiments 31, 33, 35, 37, 39, and 41 to 48, or a pharmaceutically acceptable salt thereof, wherein one of R¹ and R² is independently selected from:

C₂-C₆ alkynyl; and
Substituted C₂-C₆ alkynyl.

58. The compound according to any one of Embodiments 31, 33, 35, 37, 39,
and 41 to 48, or a pharmaceutically acceptable salt thereof, wherein at least one of
R¹ and R² is independently selected from:

C₃-C₆ cycloalkyl-(C₁-C₆ alkylenyl); and
Substituted C₃-C₆ cycloalkyl-(C₁-C₆ alkylenyl).

10 59. The compound according to any one of Embodiments 31, 33, 35, 37, 39,
and 41 to 48, or a pharmaceutically acceptable salt thereof, wherein one of R¹ and
R² is independently selected from:

C₃-C₆ cycloalkyl;
Substituted C₃-C₆ cycloalkyl
3- to 6-membered heterocycloalkyl;
Substituted 3- to 6-membered heterocycloalkyl;
Phenyl;
Substituted phenyl;
Naphthyl;
Substituted naphthyl;
5-, 6-, 9-, and 10-membered heteroaryl; and
Substituted 5-, 6-, 9-, and 10-membered heteroaryl;

20 60. The compound according to any one of Embodiments 31, 33, 35, 37, 39,
and 41 to 48, or a pharmaceutically acceptable salt thereof, wherein R² is C₂-C₆
alkynyl or substituted C₂-C₆ alkynyl.

25 61. The compound according to any one of Embodiments 31, 33, 35, 37, 39,
and 41 to 60, or a pharmaceutically acceptable salt thereof, wherein each C₁-C₆
alkylenyl is CH₂, C(CH₃)₂, C(=O), or CF₂.

30 62. The compound according to any one of Embodiments 31, 33, 35, 37, 39,
and 41 to 61, or a pharmaceutically acceptable salt thereof, wherein t is 1.

63. The compound according to any one of Embodiments 31, 33, 35, 37, 39, and 41 to 62, or a pharmaceutically acceptable salt thereof, wherein at least one substituent is selected from the groups:

- 5 CO₂H;
 CO₂CH₃;
 CH₃O;
 F;
 Cl;
10 CN;
 CF₃;
 CH₃S(O)₂;
 CH₃; or

wherein at least two substituents are Cl and F, 2 F, or OCH₂O, wherein each O is bonded to adjacent carbon atoms to form a 5-membered ring.

68. A method for treating a disease mediated by an MMP-13 enzyme, comprising administering to a patient suffering from such a disease a nontoxic effective amount of a compound of Formula I according to Embodiment 1, or a pharmaceutically acceptable salt thereof.
- 5
69. The method according to Embodiment 68, wherein the compound of Formula I is according to any one of Embodiments 2 to 63, or a pharmaceutically acceptable salt thereof.
- 10
70. A method for treating arthritis, comprising administering to a patient suffering from an arthritis disease a nontoxic antiarthritic effective amount of a compound of Formula I according to Embodiment 1, or a pharmaceutically acceptable salt thereof.
- 15
71. The method according to Embodiment 70, wherein the compound of Formula I is according to any one of Embodiments 2 to 63, or a pharmaceutically acceptable salt thereof.
- 20
72. A method for treating osteoarthritis, comprising administering to a patient suffering from osteoarthritis a nontoxic effective amount of a compound of Formula I according to Embodiment 1, or a pharmaceutically acceptable salt thereof.
- 25
73. The method according to Embodiment 72, wherein the compound of Formula I is according to any one of Embodiments 2 to 63, or a pharmaceutically acceptable salt thereof.
- 30
74. A method for treating rheumatoid arthritis, comprising administering to a patient suffering from rheumatoid arthritis a nontoxic effective amount of a compound of Formula I according to Embodiment 1, or a pharmaceutically acceptable salt thereof.

75. The method according to Embodiment 74, wherein the compound of Formula I is according to any one of Embodiments 2 to 63, or a pharmaceutically acceptable salt thereof.
- 5 76. A method for treating psoriatic arthritis, comprising administering to a patient suffering from psoriatic arthritis a nontoxic effective amount of a compound of Formula I according to Embodiment 1, or a pharmaceutically acceptable salt thereof.
- 10 77. The method according to Embodiment 76, wherein the compound of Formula I is according to any one of Embodiments 2 to 63, or a pharmaceutically acceptable salt thereof.
- 15 78. A method for treating a cancer, comprising administering to a patient suffering from a cancer a nontoxic anti-cancer effective amount of a compound of Formula I according to Embodiment 1, or a pharmaceutically acceptable salt thereof.
- 20 79. The method according to Embodiment 78, wherein the compound of Formula I is according to any one of Embodiments 2 to 63, or a pharmaceutically acceptable salt thereof.
- 25 80. A method for treating breast carcinoma, comprising administering to a patient suffering from breast carcinoma a nontoxic effective amount of a compound of Formula I according to Embodiment 1, or a pharmaceutically acceptable salt thereof.
- 30 81. The method according to Embodiment 80, wherein the compound of Formula I is according to any one of Embodiments 2 to 63, or a pharmaceutically acceptable salt thereof.
82. A method for treating atherosclerosis, comprising administering to a patient suffering from atherosclerosis a nontoxic effective amount of a compound

of Formula I according to Embodiment 1, or a pharmaceutically acceptable salt thereof.

83. The method according to Embodiment 82, wherein the compound of
5 Formula I is according to any one of Embodiments 2 to 63, or a pharmaceutically acceptable salt thereof.

84. A method for treating inflammation, comprising administering to a patient suffering from inflammation a nontoxic effective amount of a compound of
10 Formula I according to Embodiment 1, or a pharmaceutically acceptable salt thereof.

85. The method according to Embodiment 84, wherein the compound of Formula I is according to any one of Embodiments 2 to 63, or a pharmaceutically acceptable salt thereof.
15

86. A method for treating heart failure, comprising administering to a patient suffering from heart failure a nontoxic effective amount of a compound of Formula I according to Embodiment 1, or a pharmaceutically acceptable salt
20 thereof.

87. The method according to Embodiment 86, wherein the compound of Formula I is according to any one of Embodiments 2 to 63, or a pharmaceutically acceptable salt thereof.
25

88. A method for treating age-related macular degeneration, comprising administering to a patient suffering from age-related macular degeneration a nontoxic effective amount of a compound of Formula I according to Embodiment 1, or a pharmaceutically acceptable salt thereof.
30

89. The method according to Embodiment 88, wherein the compound of Formula I is according to any one of Embodiments 2 to 63, or a pharmaceutically acceptable salt thereof.

90. A method for treating chronic obstructive pulmonary disease, comprising administering to a patient suffering from chronic obstructive pulmonary disease a nontoxic effective amount of a compound of Formula I according to Embodiment 1, or a pharmaceutically acceptable salt thereof.
- 5
91. The method according to Embodiment 90, wherein the compound of Formula I is according to any one of Embodiments 2 to 63, or a pharmaceutically acceptable salt thereof.
- 10
92. A method for treating heart disease, comprising administering to a patient suffering from heart disease a nontoxic effective amount of a compound of Formula I according to Embodiment 1, or a pharmaceutically acceptable salt thereof.
- 15
93. The method according to Embodiment 92, wherein the compound of Formula I is according to any one of Embodiments 2 to 63, or a pharmaceutically acceptable salt thereof.
- 20
94. A method for treating multiple sclerosis, comprising administering to a patient suffering from multiple sclerosis a nontoxic effective amount of a compound of Formula I according to Embodiment 1, or a pharmaceutically acceptable salt thereof.
- 25
95. The method according to Embodiment 94, wherein the compound of Formula I is according to any one of Embodiments 2 to 63, or a pharmaceutically acceptable salt thereof.
- 30
96. A method for treating psoriasis, comprising administering to a patient suffering from psoriasis a nontoxic effective amount of a compound of Formula I according to Embodiment 1, or a pharmaceutically acceptable salt thereof.

97. The method according to Embodiment 96, wherein the compound of Formula I is according to any one of Embodiments 2 to 63, or a pharmaceutically acceptable salt thereof.
- 5 98. A method for treating asthma, comprising administering to a patient suffering from asthma a nontoxic effective amount of a compound of Formula I according to Embodiment 1, or a pharmaceutically acceptable salt thereof.
- 10 99. The method according to Embodiment 98, wherein the compound of Formula I is according to any one of Embodiments 2 to 63, or a pharmaceutically acceptable salt thereof.
- 15 100. A method for treating cardiac insufficiency, comprising administering to a patient suffering from cardiac insufficiency a nontoxic effective amount of a compound of Formula I according to Embodiment 1, or a pharmaceutically acceptable salt thereof.
- 20 101. The method according to Embodiment 100, wherein the compound of Formula I is according to any one of Embodiments 2 to 63, or a pharmaceutically acceptable salt thereof.
- 25 102. A method for treating inflammatory bowel disease, comprising administering to a patient suffering from inflammatory bowel disease a nontoxic effective amount of a compound of Formula I according to Embodiment 1, or a pharmaceutically acceptable salt thereof.
- 30 103. The method according to Embodiment 102, wherein the compound of Formula I is according to any one of Embodiments 2 to 63, or a pharmaceutically acceptable salt thereof.
104. A method for treating osteoporosis, comprising administering to a patient suffering from osteoporosis a nontoxic effective amount of a compound of

Formula I according to Embodiment 1, or a pharmaceutically acceptable salt thereof.

105. The method according to Embodiment 104, wherein the compound of
5 Formula I is according to any one of Embodiments 2 to 63, or a pharmaceutically
acceptable salt thereof.

106. A method for treating periodontal diseases, comprising administering to a
patient suffering from periodontal diseases a nontoxic effective amount of a
10 compound of Formula I according to Embodiment 1, or a pharmaceutically
acceptable salt thereof.

107. The method according to Embodiment 106, wherein the compound of
Formula I is according to any one of Embodiments 2 to 63, or a pharmaceutically
15 acceptable salt thereof.

108. The method according to any one of Embodiments 66 to 107, wherein the
compound of Formula I according to Embodiment 1, or a pharmaceutically
acceptable salt thereof, is administered as a pharmaceutical composition according
20 to Embodiment 64 or 65.

DETAILED DESCRIPTION OF THE INVENTION

This invention provides compounds defined by Formula I

25 or a pharmaceutically acceptable salt thereof,
wherein R¹, Q, D, V¹, m, and R² are as defined above.

The invention also provides pharmaceutical compositions comprising a compound of Formula I, or a pharmaceutically acceptable salt thereof, as defined above, together with a pharmaceutically acceptable carrier, diluent, or excipient.

The invention also provides methods of inhibiting an MMP-13 enzyme in an animal, comprising administering to the animal a compound of Formula I, or a pharmaceutically acceptable salt thereof.

5 The invention also provides methods of treating a disease mediated by an MMP-13 enzyme in a patient, comprising administering to the patient a compound of Formula I, or a pharmaceutically acceptable salt thereof, either alone or in a pharmaceutical composition.

10 The invention also provides methods of treating diseases such as heart disease, multiple sclerosis, osteo- and rheumatoid arthritis, arthritis other than osteo- or rheumatoid arthritis, cardiac insufficiency, inflammatory bowel disease, heart failure, age-related macular degeneration, chronic obstructive pulmonary disease, asthma, periodontal diseases, psoriasis, atherosclerosis, and osteoporosis in a patient, comprising administering to the patient a compound of Formula I, or a pharmaceutically acceptable salt thereof, either alone or in a pharmaceutical 15 composition.

The invention also provides combinations, comprising a compound of Formula I, or a pharmaceutically acceptable salt thereof, together with another pharmaceutically active component as described.

As seen above, the groups of Formula I include “C₁-C₆ alkyl” groups.
20 C₁-C₆ alkyl groups are straight and branched carbon chains having from 1 to 6 carbon atoms. Examples of C₁-C₆ alkyl groups include methyl, ethyl, 1-propyl, 2-propyl, 1-butyl, 2-butyl, 2,2-dimethylethyl, 1-pentyl, 2-pentyl, 2,2-dimethylpropyl, and 1-hexyl.

25 The phrase “substituted C₁-C₆ alkyl” means a C₁-C₆ alkyl group as defined above that is substituted with from 1 to 4 substituents independently selected from the list above. Illustrative examples of substituted C₁-C₆ alkyl groups include CH₂OH, CF₂OH, CH₂C(CH₃)₂CO₂CH₃, CF₃, C(O)CF₃, C(O)-CH₃, (CH₂)₄-S-CH₃, CH(CO₂H)CH₂CH₂C(O)NMe₂, (CH₂)₅NH-C(O)-NH₂, CH₂-CH₂-C(H)-(4-fluorophenyl), CH(OCH₃)CH₂CH₃, CH₂SO₂NH₂, and
30 CH(CH₃)CH₂CH₂OC(O)CH₃.

The term “C₂-C₆ alkenyl” means a straight or branched, unsubstituted hydrocarbon group having from 2 to 6 carbon atoms and 1 or 2 carbon-carbon double bonds, and include allenyl groups. Typical examples of C₂-C₆ alkenyl groups include ethenyl, 1-propen-1-yl, 1-propen-2-yl, 2-propen-1-yl, 1-buten-3-yl, 5 2-penten-2-yl, and 1-hexen-6-yl.

The phrase “substituted C₂-C₆ alkenyl” means a C₂-C₆ alkenyl as defined above, which is substituted with from 1 to 4 substituents independently selected from the list above. Illustrative examples of substituted C₂-C₆ alkenyl groups include C(H)=C(H)CH₂OH, CH=CF₂, CH₂C(H)=C(H)-(CH₂)₂CF₂OH, 10 CH₂C(=CH₂)CO₂CH₃, C(H)=C(H)-CF₃, CH₂-CH₂-C(H)=C(H)-C(O)-CH₃, C(H)=C(CH₃)-S-CH₃, C(H)=C(H)-C(H)=C(CH₃)-CO₂Me, and C(H)=C=C(H)OC(O)CH₃.

The term “C₂-C₆ alkynyl” means a straight or branched, unsubstituted hydrocarbon group having from 2 to 6 carbon atoms and 1 or 2 carbon-carbon triple bonds. Typical examples of C₂-C₆ alkynyl groups include ethenyl, 15 1-propyn-1-yl, 1-propyn-3-yl, 1-butyn-3-yl, 2-pentyn-1-yl, and 1-hexyn-6-yl.

The phrase “substituted C₂-C₆ alkynyl” means a C₂-C₆ alkynyl as defined above, which is substituted with from 1 to 4 substituents independently selected from the list above. Illustrative examples of substituted C₂-C₆ alkynyl groups 20 include C≡CCH₂OH, C≡CF, CH₂C≡C-(CH₂)₂CF₂OH, C≡C-CH₂CO₂CH₃, CH₂C≡C-CF₃, CH₂-CH₂-C≡C-C(O)-CH₃, C≡C-S-CH₃, and C≡C-C(O)OC(O)CH₃.

The term “C₃-C₆ cycloalkyl” means an unsubstituted cyclic hydrocarbon group having from 3 to 6 carbon atoms. C₃-C₆ cycloalkyl may optionally contain one carbon-carbon double bond. The group C₃-C₆ cycloalkyl includes 25 cyclopropyl, cyclobutyl, cyclopentyl, cyclopenten-1-yl, cyclopenten-4-yl, and cyclohexyl.

The phrase “substituted C₃-C₆ cycloalkyl” means a C₃-C₆ cycloalkyl as defined above, which is substituted with from 1 to 4 substituents independently selected from the list above. Illustrative examples of substituted C₃-C₆ cycloalkyl 30

groups include 1-hydroxy-cyclopropyl, cyclobutanon-3-yl, 3-(3-phenyl-ureido)-cyclopent-1-yl, and 4-carboxy-cyclohexyl.

The phrase “3- to 6-membered heterocycloalkyl” means an unsubstituted saturated cyclic group having carbon atoms and 1 or 2 heteroatoms independently selected from 2 O, 1 S, 1 S(O), 1 S(O)₂, 1 N, 2 N(H), and 2 N(C₁-C₆ alkyl), wherein when two O atoms or one O atom and one S atom are present, the two O atoms or one O atom and one S atom are not bonded to each other. Optionally, a 3- to 6-membered heterocycloalkyl may contain one carbon-carbon or carbon-nitrogen double bond. Illustrative examples of 3- to 6-membered heterocycloalkyl includes aziridin-1-yl, 1-oxa-cyclobutan-2-yl, tetrahydofuran-3-yl, morpholin-4-yl, 2-thiacyclohex-1-yl, 2-oxo-2-thiacyclohe-1-yl, 2,2-dioxo-2-thiacyclohex-1-yl, and 4-methyl-piperazin-2-yl.

The phrase “substituted 3- to 6-membered heterocycloalkyl” means a 3- to 6-membered heterocycloalkyl as defined above, which is substituted with from 1 to 4 substituents independently selected from the list above. Illustrative examples of substituted 3- to 6-membered heterocycloalkyl include 2-hydroxy-aziridin-1-yl, 3-oxo-1-oxacyclobutan-2-yl, 2,2-dimethyl-tetrahydrofuran-3-yl, 3-carboxy-morpholin-4-yl, and 1-cyclopropyl-4-methyl-piperazin-2-yl.

The term “C₁-C₆ alkylenyl” means a saturated hydrocarbon diradical that is straight or branched and has from 1 to 6 carbon atoms. C₁-C₆ alkylenyl having from 2 to 6 carbon atoms may optionally contain one carbon-carbon double bond. Illustrative examples of C₁-C₆ alkylenyl include CH₂, CH₂CH₂, C(CH₃)H, C(H)(CH₃)CH₂CH₂, and CH₂C(H)=C(H)CH₂.

The phrase “C₃-C₆ cycloalkyl-(C₁-C₆ alkylenyl)” means a C₃-C₆ cycloalkyl, as defined above, bonded through a C₁-C₆ alkylenyl, as defined above.

The phrase “Substituted C₃-C₆ cycloalkyl-(C₁-C₆ alkylenyl)-(C₁-C₆ alkylenyl)” means a substituted C₃-C₆ cycloalkyl, as defined above, bonded through a C₁-C₆ alkylenyl, as defined above.

The phrase “3- to 6-membered heterocycloalkyl-(C₁-C₆ alkylenyl)” means a 3- to 6-membered heterocycloalkyl, as defined above, bonded through a C₁-C₆ alkylenyl, as defined above.

The phrase “Substituted 3- to 6-membered heterocycloalkyl-(C₁-C₆ alkylenyl)” means a substituted 3- to 6-membered heterocycloalkyl, as defined above, bonded through a C₁-C₆ alkylenyl, as defined above.

5 The phrase “Phenyl-(C₁-C₆ alkylenyl)” means a phenyl group bonded through a C₁-C₆ alkylenyl diradical, wherein C₁-C₆ alkylenyl is as defined above. Illustrative examples of phenyl-(C₁-C₆ alkylenyl) include benzyl, 2-phenyleethyl, 1-phenyl-prop-1-yl, and 3-phenyl-pentyl.

10 The phrase “Substituted phenyl-(C₁-C₆ alkylenyl)” means a phenyl-(C₁-C₆ alkylenyl) as defined above, which is substituted on phenyl and/or C₁-C₆ alkylenyl with from 1 to 4 substituents independently selected from the list above. Illustrative examples of substituted phenyl-(C₁-C₆ alkylenyl) include 4-fluoro-phenylmethyl, 2-(4-carboxy-phenyl)-ethyl, 1-(2,4-dimethoxy-phenyl)-2-oxo-propyl, and 1-phenyl-5,5-difluoropentyl.

15 The term “naphthyl” includes 1-naphthyl and 2-naphthyl.
The phrase “Naphthyl-(C₁-C₆ alkylenyl)” means a naphthyl group as defined above bonded through a C₁-C₆ alkylenyl diradical, wherein C₁-C₆ alkylenyl is as defined above. Illustrative examples of naphthyl-(C₁-C₆ alkylenyl) include naphth-1-ylmethyl, 2-(naphth-1-yl)ethyl, and 3-(naphth-2-yl)-1-pentyl.

20 The phrase “Substituted naphthyl-(C₁-C₆ alkylenyl)” means a naphthyl-(C₁-C₆ alkylenyl) as defined above, which is substituted on naphthyl and/or C₁-C₆ alkylenyl with from 1 to 4 substituents independently selected from the list above. Illustrative examples of substituted phenyl-(C₁-C₆ alkylenyl) include 4-fluoro-(naphth-1-yl)methyl, 2-(4-carboxy-(naphth-1-yl))-ethyl, 1-(2,4-dimethoxy-(naphth-1-yl))-2-oxo-propyl, and 1-(naphth-2-yl)-5,5-difluoropentyl.

25 The phrase “5-, 6-, 9-, and 10-membered heteroaryl” means a 5-membered, monocyclic heteroaryl, a 6-membered, monocyclic heteroaryl, a 9-membered, 6,5-fused bicyclic heteroaryl, or a 10-membered, 6,6-fused bicyclic heteroaryl, having carbon atoms and from 1 to 4 heteroatoms independently selected from 1 O, 1 S, 1 N(H), 1 N(C₁-C₆ alkyl), and 4 N, wherein at least one of the 2 fused rings is aromatic, and wherein when the O and S atoms both are present, the O and S atoms are not bonded to each other, which are as defined below:

- (i) The phrase “5-membered, monocyclic heteroaryl” means a 5-membered, monocyclic, aromatic ring group as defined above having carbon atoms and from 1 to 4 heteroatoms selected from 1 O, 1 S, 1 N(H), 1 N(C₁-C₆ alkyl), and 4 N. Illustrative examples of a 5-membered, monocyclic heteroaryl include thiophen-2-yl, furan-2-yl, pyrrol-3-yl, pyrrol-1-yl, imidazol-4-yl, isoxazol-3-yl, oxazol-2-yl, thiazol-4-yl, tetrazol-1-yl, 1,2,4-oxadiazol-3-yl, 1,2,4-triazol-1-yl, and pyrazol-3-yl;
- (ii) The phrase “6-membered, monocyclic heteroaryl” means a 6-membered, monocyclic, aromatic ring group as defined above having carbon atoms and 1 or 2 N. Illustrative examples of a 6-membered, monocyclic heteroaryl include pyridin-2-yl, pyridin-4-yl, pyrimidin-2-yl, pyridazin-4-yl, and pyrazin-2-yl;
- (iii) The phrase “9-membered, 6,5-fused bicyclic heteroaryl” means a 9-membered aromatic, fused-bicyclic ring group as defined above having carbon atoms and from 1 to 4 heteroatoms selected from 1 O, 1 S, 1 N(H), 1 N(C₁-C₆ alkyl), and 4 N. Illustrative examples of a 9-membered, fused-bicyclic heteroaryl include indol-2-yl, indol-6-yl, iso-indol-2-yl, benzimidazol-2-yl, benzimidazol-1-yl, benztriazol-1-yl, benztriazol-5-yl, benzoxazol-2-yl, benzothiophen-5-yl, and benzofuran-3-yl; and
- (iv) The phrase “10-membered, 6,5-fused bicyclic heteroaryl” means a 10-membered aromatic, fused-bicyclic ring group as defined above having carbon atoms and from 1 to 4 heteroatoms selected from 1 O, 1 S, 1 N(H), 1 N(C₁-C₆ alkyl), and 4 N. Illustrative examples of a 10-membered, fused-bicyclic heteroaryl include quinolin-2-yl, isoquinolin-7-yl, and benzopyrimidin-2-yl.
- The phrase “substituted 5-, 6-, 9-, and 10-membered heteroaryl” means a 5-, 6-, 9-, and 10-membered heteroaryl as defined above, which is substituted on a carbon (CH) atom and/or nitrogen [N(H)] atom in the case of 5-, 9-, and 10-membered heteroaryl, with from 1 to 4 substituents independently selected from the list above.
- Illustrative examples of substituted 5-membered, monocyclic heteroaryl groups include 2-hydroxy-oxoazol-4-yl, 5-chloro-thiophen-2-yl,

1-methylimidazol-5-yl, 1-propyl-pyrrol-2-yl, 1-acetyl-pyrazol-4-yl, 1-methyl-1,2,4-triazol-3-yl, and 2-hexyl-tetrazol-5-yl.

Illustrative examples of substituted 6-membered, monocyclic heteroaryl groups include 4-acetyl-pyridin-2-yl, 3-fluoro-pyridin-4-yl, 5-carboxy-pyrimidin-2-yl, 6-tertiary butyl-pyridazin-4-yl, and 5-hydroxymethyl-pyrazin-2-yl.

Illustrative examples of substituted 9-membered, fused-bicyclic heteroaryl include 3-(2-aminomethyl)-indol-2-yl, 2-carboxy-indol-6-yl, 1-(methanesulfonyl)-iso-indol-2-yl, 5-trifluoromethyl-6,7-difluoro-4-hydroxymethyl-benzimidazol-2-yl, 4-(3-methylureido)-2-cyano-benzimidazol-1-yl, 1-methylbenzimidazol-6-yl, 1-acetylbenztriazol-7-yl, 1-methanesulfonyl-indol-3-yl, 1-cyano-6-aza-indol-5-yl, and 1-(2,6-dichlorophenylmethyl)-benzpyrazol-3-yl.

Illustrative examples of substituted 10-membered, fused-bicyclic heteroaryl include 5,7-dichloro-quinolin-2-yl, isoquinolin-7-yl-1-carboxylic acid ethyl ester, and 3-bromo-benzopyrimidin-2-yl.

The phrase “5-membered heteroarylenyl” means a 5-membered, monocyclic, aromatic ring diradical group having carbon atoms and from 1 to 4 heteroatoms selected from 1 O, 1 S, 1 N(H), 1 N(C₁-C₆ alkyl), and 4 N. Optionally, heteroarylenyl may be unsubstituted or substituted on a carbon atom (CH) or nitrogen atom [N(H)] with 1 substituent selected from fluoro, methyl, hydroxy, trifluoromethyl, cyano, and acetyl. Illustrative examples of a 5-membered heteroarylenyl include thiophen-2,5-diyl, furan-2,3-di-yl, pyrrol-1,3-di-yl, imidazol-1,4-diyl, tetrazol-2,5-diyl, tetrazol-1,5-dicyl, oxadiazol-3,5-diyl, thiazol-2,4-diyl, and pyrazol-1,3-diyl.

The term “Phenyl-O-(C₁-C₈ alkylene)” means a phenyl bonded through an oxygen atom, which is bonded through a C₁-C₈ alkylene, wherein C₁-C₈ alkylene is as defined above. Illustrative examples of phenyl-O-(C₁-C₈ alkylene) include phenoxyethyl and 2-phenoxyethyl.

The term “Substituted phenyl-O-(C₁-C₈ alkylene)” means a phenyl-O-(C₁-C₈ alkylene) group, as defined above, that is substituted with from 1 to 4 substituents as defined above for R². Illustrative examples of substituted phenyl-O-(C₁-C₈ alkylene) include 4-fluorophenoxyethyl and 2-phenoxy-methylcarbonyl.

- The term “Phenyl-S-(C₁-C₈ alkylenyl)” means a phenyl bonded through an sulfur atom, which is bonded through a C₁-C₈ alkylenyl, wherein C₁-C₈ alkylenyl is as defined above. Illustrative examples of phenyl-S-(C₁-C₈ alkylenyl) include thiophenoxyethyl and 2-thiophenoxyethyl.
- 5 The term “Substituted phenyl-S-(C₁-C₈ alkylenyl)” means a phenyl-S-(C₁-C₈ alkylenyl) group, as defined above, that is substituted with from 1 to 4 substituents as defined above for R². Illustrative examples of substituted phenyl-S-(C₁-C₈ alkylenyl) include 4-fluorothiophenoxyethyl and 2-thiophenoxy-methylcarbonyl.
- 10 The term “Phenyl-S(O)-(C₁-C₈ alkylenyl)” means a phenyl bonded through an sulfur atom, which is bonded through a C₁-C₈ alkylenyl, wherein C₁-C₈ alkylenyl is as defined above and the sulfur atom is also bonded to an oxygen atom. Illustrative examples of phenyl-S(O)-(C₁-C₈ alkylenyl) include phenyl-S(=O)-CH₂ and phenyl-S(=O)-CH₂CH₂.
- 15 The term “Substituted phenyl-S(O)-(C₁-C₈ alkylenyl)” means a phenyl-S(O)-(C₁-C₈ alkylenyl) group, as defined above, that is substituted with from 1 to 4 substituents as defined above for R². Illustrative examples of substituted phenyl-S(O)-(C₁-C₈ alkylenyl) include (4-Fluoro-phenyl)-S(=O)-CH₂ and phenyl-S(=O)-CH₂C(=O).
- 20 The term “Phenyl-S(O)₂-(C₁-C₈ alkylenyl)” means a phenyl bonded through an sulfur atom, which is bonded through a C₁-C₈ alkylenyl, wherein C₁-C₈ alkylenyl is as defined above and the sulfur atom is also bonded to two oxygen atoms. Illustrative examples of phenyl-S(O)₂-(C₁-C₈ alkylenyl) include phenyl-S(=O)₂-CH₂ and phenyl-S(=O)₂-CH₂CH₂.
- 25 The term “Substituted phenyl-S(O)₂-(C₁-C₈ alkylenyl)” means a phenyl-S(O)₂-(C₁-C₈ alkylenyl) group, as defined above, that is substituted with from 1 to 4 substituents as defined above for R². Illustrative examples of substituted phenyl-S(O)₂-(C₁-C₈ alkylenyl) include (4-Fluoro-phenyl)-S(=O)₂-CH₂ and phenyl-S(=O)₂-CH₂C(=O).
- 30 The term “(C₁-C₆ alkyl)-S(O)₂-N(H)-C(O)-(C₁-C₈ alkylenyl)_m”, wherein m is an integer of 0 or 1, means, when m is 0, a C₁-C₆ alkyl group, as defined above, bonded through a sulfur atom, which is bonded through a nitrogen atom, which is bonded through a carbon atom, wherein the sulfur atom is bonded to two oxygen

atoms, the nitrogen atom is bonded to a hydrogen atom, and the carbon atom is doubly bonded to an oxygen atom to form a carbonyl group; and when m is 1, the term means a C₁-C₆ alkyl group, as defined above, bonded through a sulfur atom, which is bonded through a nitrogen atom, which is bonded through a carbon atom, which is bonded through a C₁-C₈ alkylene group, as defined above, wherein the sulfur atom is bonded to two oxygen atoms, the nitrogen atom is bonded to a hydrogen atom, and the carbon atom is doubly bonded to an oxygen atom to form a carbonyl group. Illustrative examples of (C₁-C₆ alkyl)-S(=O)₂-N(H)-C(O)-(C₁-C₈ alkylene)_m include CH₃-S(O)₂-N(H)-C(=O) and CH₃-S(O)₂-N(H)-C(=O)-CH₂.

The term “(C₁-C₆ alkyl)-C(O)-N(H)-S(O)₂-(C₁-C₈ alkylene)_m”, wherein m is an integer of 0 or 1, means, when m is 0, a C₁-C₆ alkyl group, as defined above, bonded through a carbon atom, which is bonded through a nitrogen atom, which is bonded through a sulfur atom, wherein the sulfur atom is bonded to two oxygen atoms, the nitrogen atom is bonded to a hydrogen atom, and the carbon atom is doubly bonded to an oxygen atom to form a carbonyl group; and when m is 1, the term means a C₁-C₆ alkyl group, as defined above, bonded through a carbon atom, which is bonded through a nitrogen atom, which is bonded through a sulfur atom, which is bonded through a C₁-C₈ alkylene group, as defined above, wherein the sulfur atom is bonded to two oxygen atoms, the nitrogen atom is bonded to a hydrogen atom, and the carbon atom is doubly bonded to an oxygen atom to form a carbonyl group. Illustrative examples of (C₁-C₆ alkyl)-C(O)-N(H)-S(O)₂-(C₁-C₈ alkylene)_m include CH₃-C(=O)-N(H)-S(=O)₂ and CH₃-C(=O)-N(H)-S(=O)₂-CH₂.

Preferred substituents for substituted phenyl, substituted naphthyl (i.e., substituted 1-naphthyl or substituted 2-naphthyl), and preferred substituents at carbon atoms for substituted 5-membered, monocyclic heteroaryl, substituted 6-membered, monocyclic heteroaryl, and substituted 9- or 10-membered, fused-bicyclic heteroaryl are C₁-C₄ alkyl, halo, OH, O-C₁-C₄ alkyl, oxo (“=O”), 1,2-methylenedioxy, CN, NO₂, N₃, NH₂, N(H)CH₃, N(CH₃)₂, C(O)CH₃, OC(O)-C₁-C₄ alkyl, C(O)-H, CO₂H, CO₂-(C₁-C₄ alkyl), C(O)-N(H)OH, C(O)NH₂, C(O)Name, C(O)N(Me)₂, NHC(O)CH₃, N(H)C(O)NH₂, SH, S-C₁-C₄ alkyl, C≡CH, C(=NOH)-H, C(=NOH)-CH₃, CH₂OH, CH₂NH₂,

$\text{CH}_2\text{N}(\text{H})\text{CH}_3$, $\text{CH}_2\text{N}(\text{CH}_3)_2$, $\text{C}(\text{H})\text{F}-\text{OH}$, CF_2-OH , $\text{S}(\text{O})_2\text{NH}_2$, $\text{S}(\text{O})_2\text{N}(\text{H})\text{CH}_3$, $\text{S}(\text{O})_2\text{N}(\text{CH}_3)_2$, $\text{S}(\text{O})-\text{CH}_3$, $\text{S}(\text{O})_2\text{CH}_3$, $\text{S}(\text{O})_2\text{CF}_3$, or $\text{NHS}(\text{O})_2\text{CH}_3$.

Especially preferred substituents are 1,2-methylenedioxy, methoxy, ethoxy, $-\text{O}-\text{C}(\text{O})\text{CH}_3$, carboxy, carbomethoxy, and carboethoxy.

- 5 The term “1,2-methylenedioxy” means the diradical group $-\text{O}-\text{CH}_2-\text{O}-$, wherein the substituent 1,2-methylenedioxy is bonded to adjacent carbon atoms of the group which is substituted to form a 5-membered ring. Illustrative examples of groups substituted by 1,2-methylenedioxy include 1,3-benzoxazol-5-yl of formula B

10

which is a phenyl group substituted by 1,2-methylenedioxy.

A fused-bicyclic group is a group wherein two ring systems share two, and only two, atoms.

15

It should be appreciated that the groups heteroaryl or heterocycloalkyl may not contain two ring atoms bonded to each other which atoms are oxygen and/or sulfur atoms.

The term “oxo” means $=\text{O}$. Oxo is attached at a carbon atom unless otherwise noted. Oxo, together with the carbon atom to which it is attached forms a carbonyl group (i.e., $\text{C}=\text{O}$).

20

The term “heteroatom” includes O, S, $\text{S}(\text{O})$, $\text{S}(\text{O})_2$, N, $\text{N}(\text{H})$, and $\text{N}(\text{C}_1\text{-}\text{C}_6\text{ alkyl})$.

The term “halo” includes fluoro, chloro, bromo, and iodo.

The term “amino” means NH_2 .

25

The phrase “two adjacent, substantially sp^2 carbon atoms” means carbon atoms that comprise a carbon-carbon double bond that is capable of being substituted on each carbon atom, wherein the carbon-carbon double bond is contained in an aromatic or nonaromatic, cyclic or acyclic, or carbocyclic or heterocyclic group.

30

The phrase “tertiary organic amine” means a trisubstituted nitrogen group wherein the 3 substituents are independently selected from $\text{C}_1\text{-}\text{C}_{12}$ alkyl,

C₃-C₁₂ cycloalkyl, benzyl, or wherein two of the substituents are taken together with the nitrogen atom to which they are bonded to form a 5- or 6-membered, monocyclic heterocycle containing one nitrogen atom and carbon atoms, and the third substituent is selected from C₁-C₁₂ alkyl and benzyl, or wherein the three
5 substituents are taken together with the nitrogen atom to which they are bonded to form a 7- to 12-membered bicyclic heterocycle containing 1 or 2 nitrogen atoms and carbon atoms, and optionally a C=N double bond when 2 nitrogen atoms are present. Illustrative examples of tertiary organic amine include triethylamine, diisopropylethylamine, benzyl diethylamino, dicyclohexylmethyl-amine,
10 1,8-diazabicycle[5.4.0]undec-7-ene (DBU), 1,4-diazabicyclo[2.2.2]octane (TED), and 1,5-diazabicycle[4.3.0]non-5-ene.

The phrase "pharmaceutical composition" means a composition suitable for administration in medical or veterinary use.

The term "admixed" and the phrase "in admixture" are synonymous and
15 mean in a state of being in a homogeneous or heterogeneous mixture. Preferred is a homogeneous mixture.

The term "patient" means a mammal. Preferred patients are humans, cats, dogs, cows, horses, pigs, and sheep.

The term "animal" means a mammal, as defined above. Preferred animals
20 include humans, cats, dogs, horses, pigs, sheep, cows, monkeys, rats, mice, guinea pigs, and rabbits.

The term "mammal" includes humans, companion animals such as cats and dogs, primates such as monkeys and chimpanzees, and livestock animals such as horses, cows, pigs, and sheep.

The phrase "livestock animals" as used herein refers to domesticated quadrupeds, which includes those being raised for meat and various byproducts, e.g., a bovine animal including cattle and other members of the genus Bos, a porcine animal including domestic swine and other members of the genus Sus, an ovine animal including sheep and other members of the genus Ovis, domestic goats and other members of the genus Capra; domesticated quadrupeds being raised for specialized tasks such as use as a beast of burden, e.g., an equine animal including domestic horses and other members of the family Equidae, genus
30

5 Equus, or for searching and sentinel duty, e.g., a canine animal including domestic dogs and other members of the genus Canis; and domesticated quadrupeds being raised primarily for recreational purposes, e.g., members of Equus and Canis, as well as a feline animal including domestic cats and other members of the family Felidae, genus Felis.

10 The phrase “anticancer effective amount” means an amount of invention compound, or a pharmaceutically acceptable salt thereof, or a tautomer thereof, sufficient to inhibit, halt, or cause regression of the cancer being treated in a particular patient or patient population. For example in humans or other mammals, an anticancer effective amount can be determined experimentally in a laboratory or clinical setting, or may be the amount required by the guidelines of the United States Food and Drug Administration, or equivalent foreign agency, for the particular cancer and patient being treated.

15 The phrase “anti-arthritic effective amount” means an amount of invention compound, or a pharmaceutically acceptable salt thereof, or a tautomer thereof, sufficient to inhibit, halt, or cause regression of the arthritis being treated in a particular patient or patient population. For example in humans or other mammals, an anti-arthritic effective amount can be determined experimentally in a laboratory or clinical setting, or may be the amount required by the guidelines of the United States Food and Drug Administration, or equivalent foreign agency, for the particular arthritis and patient being treated.

20 The phrase “MMP-13 inhibiting amount” means an amount of invention compound, or a pharmaceutically acceptable salt thereof, or a tautomer thereof, sufficient to inhibit an enzyme matrix metalloproteinase-13, including a truncated form thereof, including a catalytic domain thereof, in a particular animal or animal population. For example in a human or other mammal, an MMP-13 inhibiting amount can be determined experimentally in a laboratory or clinical setting, or may be the amount required by the guidelines of the United States Food and Drug Administration, or equivalent foreign agency, for the particular MMP-13 enzyme and patient being treated.

It should be appreciated that determination of proper dosage forms, dosage amounts, and routes of administration, is within the level of ordinary skill in the pharmaceutical and medical arts, and is described below.

The phrases "effective amount" and "therapeutically effective amount" are
5 synonymous and mean an amount of a compound of the present invention, a pharmaceutically acceptable salt thereof, or a solvate thereof, sufficient to effect an improvement of the condition being treated when administered to a patient suffering from a disease that is mediated by MMP-13 and optionally from 0 to 12 additional MMP enzymes.

10 The term "tautomer" means a form of invention compound existing in a state of equilibrium with an isomeric form of the invention compound, wherein the invention compound is able to react according to either form by virtue of the ability of the forms to interconvert by isomerization *in situ*, including in a reaction mixture, in an *in vitro* biological assay, or *in vivo*.

15 The term "(E)" means entgegen, and designates that the conformation about the double bond to which the term refers is the conformation having the two higher-ranking substituent groups, as determined according to the Cahn-Ingold-Prelog ranking system, on opposite sides of the double bond. An (E) double bond is illustrated below by the compound of Formula (W)

20 , wherein the two higher-ranking substituents are groups A and D.

25 The term "(Z)" means zusammen, and designates that the conformation about the double bond to which the term refers is the conformation having the two higher-ranking substituent groups, as determined according to the Cahn-Ingold-Prelog ranking system, on the same side of the double bond. A (Z) double bond is illustrated below by the compound of Formula (X)

, wherein the two higher-ranking substituents are groups A and D.

It should be appreciated that the S1' site of MMP-13 was previously thought to be a grossly linear channel which contained an opening at the top that allowed an amino acid side chain from a substrate molecule to enter during binding, and was closed at the bottom. Applicants has discovered that the S1' site 5 is actually composed of an S1' channel angularly connected to a newly discovered pocket which applicant calls the S1" site. The S1" site is open to solvent at the bottom, which can expose a functional group of Applicants' invention compounds to solvent. For illustrative purposes, the S1' site of the MMP-13 enzyme can now be thought of as being like a sock with a hole in the toes, wherein the S1' channel 10 is the region from approximately the opening to the ankle, and the S1" site is the foot region below the ankle, which foot region is angularly connected to the ankle region.

More particularly, the S1' channel is a specific part of the S1' site and is formed largely by Leu218, Val219, His222 and by residues from Leu239 to 15 Tyr244. The S1" binding site which has been newly discovered is defined by residues from Tyr246 to Pro255. The S1" site contains at least two hydrogen bond donors and aromatic groups which interact with an invention compound.

Without wishing to be bound by any particular theory, the inventors believe that the S1" site could be a recognition site for triple helix collagen, the 20 natural substrate for MMP-13. It is possible that the conformation of the S1" site is modified only when an appropriate compound binds to MMP-13, thereby interfering with the collagen recognition process. This newly discovered pattern of binding offers the possibility of greater selectivity than what is achievable with the binding pattern of known selective inhibitors of MMP-13, wherein the known 25 binding pattern requires ligation of the catalytic zinc atom at the active site and occupation the S1' channel, but not the S1" site.

The term "Thour245" means threonine 245 of an MMP-13 enzyme.

The term "Thour247" means threonine 247 of an MMP-13 enzyme.

The term "Met253" means methionine 253 of an MMP-13 enzyme.

30 The term "His251" means histidine 251 of an MMP-13 enzyme.

It should be appreciated that the matrix metalloproteinases include, but are not limited to, the following enzymes:

MMP-1, also known as interstitial collagenase, collagenase-1, or fibroblast-type collagenase;

MMP-2, also known as gelatinase A or 72 kDa Type IV collagenase;

MMP-3, also known as stromelysin or stromelysin-1;

5 MMP-7, also known as matrilysin or PUMP-1;

MMP-8, also known as collagenase-2, neutrophil collagenase or polymorphonuclear-type (“PMN-type”) collagenase;

MMP-9, also known as gelatinase B or 92 kDa Type IV collagenase;

MMP-10, also known as stromelysin-2;

10 MMP-11, also known as stromelysin-3;

MMP-12, also known as metalloelastase;

MMP-13, also known as collagenase-3;

MMP-14, also known as membrane-type (“MT”) 1-MMP or MT1-MMP;

MMP-15, also known as MT2-MMP;

15 MMP-16, also known as MT3-MMP;

MMP-17, also known as MT4-MMP;

MMP-18; and

MMP-19.

Other known MMPs include MMP-26 (Matrilysin-2).

20 For the purposes of this invention, the term “arthritis”, which is synonymous with the phrase “arthritic condition”, includes osteoarthritis, rheumatoid arthritis, degenerative joint disease, spondyloarthropathies, gouty arthritis, systemic lupus erythematosus, juvenile arthritis, and psoriatic arthritis. An allosteric inhibitor of MMP-13 having an anti-arthritis effect is a compound as defined above that inhibits the progress, prevents further progress, or reverses progression, in part or in whole, of any one or more symptoms of any one of the arthritic diseases and disorders listed above.

25 The term “IC₅₀” means the concentration of a compound, usually expressed as micromolar or nanomolar, required to inhibit an enzyme’s catalytic activity by 50%.

30 The term “ED₄₀” means the concentration of a compound, usually expressed as micromolar or nanomolar, required to treat a disease in about 40% of a patient group.

The term “ED₃₀” means the concentration of a compound, usually expressed as micromolar or nanomolar, required to treat a disease in 30% of a patient group.

The phrase “pharmaceutical composition” means a composition suitable for administration in medical or veterinary use.

5 The term “admixed” and the phrase “in admixture” are synonymous and mean in a state of being in a homogeneous or heterogeneous mixture. Preferred is a homogeneous mixture.

10 As used herein, the phrase “cartilage damage” means a disorder of hyaline cartilage and subchondral bone characterized by hypertrophy of tissues in and around the involved joints, which may or may not be accompanied by deterioration of hyaline cartilage surface.

15 The phrase “treating”, which is related to the terms “treat” and “treated”, means administration of an invention combination as defined above that inhibits the progress, prevents further progress, or reverses progression, in part or in whole, of any one or more symptoms of any one of the diseases and disorders listed above.

The phrase “invention compound” means a compound of Formula I, or a pharmaceutically acceptable salt thereof, as fully defined above.

20 The term “nontoxic” means the efficacious dose is 10 times or greater than the dose at which a toxic effect is observed in 10% or more of a patient population.

25 The term “celecoxib” means the compound named 4-(5-(4-methylphenyl)-3-(trifluoromethyl)-1H-pyrazol-1-yl)-benzenesulfonamide. Celecoxib is a selective cyclooxygenase-2 (“COX-2”) inhibitor currently approved by the FDA for the treatment of osteoarthritis, rheumatoid arthritis, and Polyposis-familial adenomatous. Celecoxib is marketed under the tradename “Celebrex”. Celecoxib is currently in clinical trials for the treatment of bladder cancer, chemopreventative-lung cancer, and post-operative pain, and is registered for the treatment of dysmenorrhea. Celecoxib has the structure drawn below:

The term “valdecoxib” means the compound named 4-(5-methyl-3-phenyl-4-isoxazolyl)-benzenesulfonamide. Valdecoxib is a selective COX-2 inhibitor that has been approved by the FDA for treating osteoarthritis, rheumatoid arthritis, dysmenorrhea, and general pain, and is marketed under the tradename “Bextra”.
5 Valdecoxib is in clinical trials for the treatment of migraine. Valdecoxib has the structure drawn below:

It should be appreciated that COX-2 is also known as prostaglandin
10 synthase-2 and prostaglandin PGH₂ synthase.

A selective inhibitor of COX-2 means compounds that inhibit COX-2 selectively versus COX-1 such that a ratio of IC₅₀ for a compound with COX-1 divided by a ratio of IC₅₀ for the compound with COX-2 is greater than, or equal to, 5, where the ratios are determined in one or more assays. All that is required to determine whether a compound is a selective COX-2 inhibitor is to assay a compound in one of a number of well known assays in the art.
15

The term “NSAID” is an acronym for the phrase “nonsteroidal anti-inflammatory drug”, which means any compound which inhibits cyclooxygenase-1 (“COX-1”) and cyclooxygenase-2. Most NSAIDs fall within one of the

following five structural classes: (1) propionic acid derivatives, such as ibuprofen, naproxen, naprosyn, diclofenac, and ketoprofen; (2) acetic acid derivatives, such as tolmetin and sulindac; (3) fenamic acid derivatives, such as mefenamic acid and meclofenamic acid; (4) biphenylcarboxylic acid derivatives, such as diflunisal and flufenisal; and (5) oxicams, such as piroxim, peroxicam, sudoxicam, and isoxicam. Other useful NSAIDs include aspirin, acetominophen, indomethacin, and phenylbutazone. Selective inhibitors of cyclooxygenase-2 as described above may be considered to be NSAIDs also.

The term "drugs", which is synonymous with the phrases "active components", "active compounds", and "active ingredients", includes celecoxib, or a pharmaceutically acceptable salt thereof, valdecoxib, or a pharmaceutically acceptable salt thereof, and an allosteric inhibitor of MMP-13, and may further include one or two of the other therapeutic agents described above.

The compounds of Formula I, or pharmaceutically acceptable salts thereof, or tautomers thereof, include compounds which are invention compounds. An allosteric inhibitor of MMP-13 is any compound of Formula I that binds allosterically into the S1' site of the MMP-13 enzyme, including the S1' channel, and a newly discovered S1" site, without ligating, coordinating, or binding the catalytic zinc of the MMP-13.

An invention compound that is an allosteric inhibitor of MMP-13 may be readily identified by one of ordinary skill in the pharmaceutical or medical arts by assaying an alkyne test compound for inhibition of MMP-13 as described below in Biological Methods 1 or 2, and for allosteric inhibition of MMP-13 by assaying the test invention compound for inhibition of MMP-13 in the presence of an inhibitor to the catalytic zinc of MMP-13 as described below in Biological Methods 3 or 4.

Further, an invention compound having an anti-inflammatory, an analgesic, anti-arthritis, or a cartilage damage inhibiting effect, or any combination of these effects, may be readily identified by one of ordinary skill in the pharmaceutical or medical arts by assaying the invention compound in any number of well known assays for measuring determining the invention compound's effects on cartilage damage, arthritis, inflammation, or pain. These assays include in vitro assays that utilize cartilage samples and in vivo assays in

whole animals that measure cartilage degradation, inhibition of inflammation, or pain alleviation.

For example with regard to assaying cartilage damage in vitro, an amount of an invention compound or control vehicle may be administered with a cartilage damaging agent to cartilage, and the cartilage damage inhibiting effects in both tests studied by gross examination or histopathologic examination of the cartilage, or by measurement of biological markers of cartilage damage such as, for example, proteoglycan content or hydroxyproline content. Further, in vivo assays to assay cartilage damage may be performed as follows: an amount of an invention compound or control vehicle may be administered with a cartilage damaging agent to an animal, and the effects of the invention compound being assayed on cartilage in the animal may be evaluated by gross examination or histopathologic examination of the cartilage, by observation of the effects in an acute model on functional limitations of the affected joint that result from cartilage damage, or by measurement of biological markers of cartilage damage such as, for example, proteoglycan content or hydroxyproline content.

Several methods of identifying an invention compound with cartilage damage inhibiting properties are described below. The amount to be administered in an assay is dependent upon the particular assay employed, but in any event is not higher than the well known maximum amount of a compound that the particular assay can effectively accommodate.

Similarly, invention compounds having pain-alleviating properties may be identified using any one of a number of in vivo animal models of pain.

Still similarly, invention compounds having anti-inflammatory properties may be identified using any one of a number of in vivo animal models of inflammation. For example, for an example of inflammation models, see United States patent number 6, 329,429, which is incorporated herein by reference.

Still similarly, invention compounds having anti-arthritis properties may be identified using any one of a number of in vivo animal models of arthritis. For example, for an example of arthritis models, see also United States patent number 6, 329,429.

Other mammalian diseases and disorders which are treatable by administration of an invention combination alone, or contained in a

pharmaceutical composition as defined below, include: fever (including rheumatic fever and fever associated with influenza and other viral infections), common cold, dysmenorrhea, menstrual cramps, inflammatory bowel disease, Crohn's disease, emphysema, acute respiratory distress syndrome, asthma, bronchitis, chronic obstructive pulmonary disease, Alzheimer's disease, organ transplant toxicity, 5 cachexia, allergic reactions, allergic contact hypersensitivity, cancer (such as solid tumor cancer including colon cancer, breast cancer, lung cancer and prostate cancer; hematopoietic malignancies including leukemias and lymphomas; Hodgkin's disease; aplastic anemia, skin cancer and familiar adenomatous polyposis), tissue ulceration, peptic ulcers, gastritis, regional enteritis, ulcerative colitis, diverticulitis, recurrent gastrointestinal lesion, gastrointestinal bleeding, coagulation, anemia, synovitis, gout, ankylosing spondylitis, restenosis, periodontal disease, epidermolysis bullosa, osteoporosis, loosening of artificial joint implants, atherosclerosis (including atherosclerotic plaque rupture), aortic aneurysm, 10 (including abdominal aortic aneurysm and brain aortic aneurysm), periarteritis nodosa, congestive heart failure, myocardial infarction, stroke, cerebral ischemia, head trauma, spinal cord injury, neuralgia, neuro-degenerative disorders (acute and chronic), autoimmune disorders, Huntington's disease, Parkinson's disease, migraine, depression, peripheral neuropathy, pain (including low back and neck pain, headache and toothache), gingivitis, cerebral amyloid angiopathy, nootropic or cognition enhancement, amyotrophic lateral sclerosis, multiple sclerosis, ocular angiogenesis, corneal injury, macular degeneration, conjunctivitis, abnormal wound healing, muscle or joint sprains or strains, tendonitis, skin disorders (such as psoriasis, eczema, scleroderma and dermatitis), myasthenia gravis, polymyositis, 15 myositis, bursitis, burns, diabetes (including types I and II diabetes, diabetic retinopathy, neuropathy and nephropathy), tumor invasion, tumor growth, tumor metastasis, corneal scarring, scleritis, immunodeficiency diseases (such as AIDS in humans and FLV, FIV in cats), sepsis, premature labor, hypoprothrombinemia, hemophilia, thyroiditis, sarcoidosis, Behcet's syndrome, hypersensitivity, kidney 20 disease, Rickettsial infections (such as Lyme disease, Ehrlichiosis), Protozoan diseases (such as malaria, giardia, coccidia), reproductive disorders (preferably in livestock), epilepsy, convulsions, and septic shock.

Other aspects of the present invention are compounds of Formula I, or a pharmaceutically acceptable salt thereof, that are ≥ 10 , ≥ 20 , ≥ 50 , ≥ 100 , or ≥ 1000 times more potent versus MMP-13 than versus at least two of any other MMP enzyme or TACE.

5 Still other aspects of the present invention are compounds of Formula I, or a pharmaceutically acceptable salt thereof, that are selective inhibitors of MMP-13 versus 2, 3, 4, 5, 6, or 7 other MMP enzymes, or versus TACE and 1, 2, 3, 4, 5, 6, or 7 other MMP enzymes.

10 It should be appreciated that selectivity of a compound of Formula I, or a pharmaceutically acceptable salt thereof, is a multidimensional characteristic that includes the number of other MMP enzymes and TACE over which selectivity for MMP-13 inhibition is present and the degree of selectivity of inhibition of MMP-13 over another particular MMP or TACE, as measured by, for example, the IC_{50} in micromolar concentration of the compound for the inhibition of the other MMP 15 enzyme or TACE divided by the IC_{50} in micromolar concentration of the compound for the inhibition of MMP-13.

15 As discussed above, one aspect of the present invention is novel compounds that are selective inhibitors of the enzyme MMP-13. A selective inhibitor of MMP-13, as used in the present invention, is a compound that is $\geq 5\times$ more potent *in vitro* versus MMP-13 than versus at least one other matrix metalloproteinase enzyme such as, for example, MMP-1, MMP-2, MMP-3, MMP-7, MMP-8, MMP-9, or MMP-14, or versus tumor necrosis factor alpha convertase ("TACE"). A preferred aspect of the present invention is novel compounds that are selective inhibitors of MMP-13 versus MMP-1.

20 The invention provides a compound of Formula I, or a pharmaceutically acceptable salt thereof, which has an IC_{50} with any MMP enzyme that is less than or equal to 50 micromolar. Preferred are compounds of Formula I, or a pharmaceutically acceptable salt thereof, which have an IC_{50} with a human full-length MMP-13 ("hMMP-13FL") or a human MMP-13 catalytic domain 25 ("hMMP-13CD") that is less than or equal to 50 micromolar. More preferred are compounds of Formula I, or a pharmaceutically acceptable salt thereof, which have an IC_{50} with a human full-length MMP-13 ("hMMP-13FL") or a human

MMP-13 catalytic domain (“hMMP-13CD”) that is less than or equal to 10 micromolar. Examples of biological methods useful for determining IC₅₀s for the invention compounds with an MMP are described below in Biological Methods 1 to 4. Any compound of Formula I, or a pharmaceutically acceptable salt thereof, 5 or any form thereof as defined above, that does not have an IC₅₀ with any MMP enzyme that is less than, or equal to, 10 micromolar is excluded from this invention.

Some of the invention compounds are capable of further forming nontoxic pharmaceutically acceptable salts, including, but not limited to, acid addition 10 and/or base salts. The acid addition salts are formed from basic invention compounds, whereas the base addition salts are formed from acidic invention compounds. All of these forms are within the scope of the compounds useful in the invention.

Pharmaceutically acceptable acid addition salts of the basic invention 15 compounds include nontoxic salts derived from inorganic acids such as hydrochloric, nitric, phosphoric, sulfuric, hydrobromic, hydroiodic, hydrofluoric, phosphorous, and the like, as well nontoxic salts derived from organic acids, such as aliphatic mono- and dicarboxylic acids, phenyl-substituted alkanoic acids, hydroxy alkanoic acids, alkanedioic acids, aromatic acids, aliphatic and aromatic 20 sulfonic acids, etc. Such salts thus include sulfate, pyrosulfate, bisulfate, sulfite, bisulfite, nitrate, phosphate, monohydrogenphosphate, dihydrogenphosphate, metaphosphate, pyrophosphate, chloride, bromide, iodide, acetate, trifluoroacetate, propionate, caprylate, isobutyrate, oxalate, malonate, succinate, suberate, sebacate, fumarate, maleate, mandelate, benzoate, chlorobenzoate, 25 methylbenzoate, dinitrobenzoate, phthalate, benzenesulfonate, toluenesulfonate, phenylacetate, citrate, lactate, malate, tartrate, methanesulfonate, and the like. Also contemplated are salts of amino acids such as arginate and the like and gluconate, galacturonate (see, for example, Berge S.M. et al., “Pharmaceutical Salts,” J. of Pharma. Sci., 1977;66:1).

An acid addition salt of a basic invention compound is prepared by 30 contacting the free base form of the compound with a sufficient amount of a desired acid to produce a nontoxic salt in the conventional manner. The free base form of the compound may be regenerated by contacting the acid addition salt so

formed with a base, and isolating the free base form of the compound in the conventional manner. The free base forms of compounds prepared according to a process of the present invention differ from their respective acid addition salt forms somewhat in certain physical properties such as solubility, crystal structure, hygroscopicity, and the like, but otherwise free base forms of the invention compounds and their respective acid addition salt forms are equivalent for purposes of the present invention.

A nontoxic pharmaceutically acceptable base addition salt of an acidic invention compound may be prepared by contacting the free acid form of the compound with a metal cation such as an alkali or alkaline earth metal cation, or an amine, especially an organic amine. Examples of suitable metal cations include sodium cation (Na^+), potassium cation (K^+), magnesium cation (Mg^{2+}), calcium cation (Ca^{2+}), and the like. Examples of suitable amines are N,N'-dibenzylethylenediamine, chloroprocaine, choline, diethanolamine, dicyclohexylamine, ethylenediamine, N-methylglucamine, and procaine (see, for example, Berge, *supra.*, 1977).

A base addition salt of an acidic invention compound may be prepared by contacting the free acid form of the compound with a sufficient amount of a desired base to produce the salt in the conventional manner. The free acid form of the compound may be regenerated by contacting the salt form so formed with an acid, and isolating the free acid of the compound in the conventional manner. The free acid forms of the invention compounds differ from their respective salt forms somewhat in certain physical properties such as solubility, crystal structure, hygroscopicity, and the like, but otherwise the salts are equivalent to their respective free acid for purposes of the present invention.

Certain invention compounds can exist in unsolvated forms as well as solvated forms, including hydrated forms. In general, the solvated forms, including hydrated forms, are equivalent to unsolvated forms and are encompassed within the scope of the present invention.

Certain of the invention compounds possess one or more chiral centers, and each center may exist in the R or S configuration. An invention compound

includes any diastereomeric, enantiomeric, or epimeric form of the compound, as well as mixtures thereof.

5 Additionally, certain invention compounds may exist as geometric isomers such as the entgegen (E) and zusammen (Z) isomers of 1,2-disubstituted alkenyl groups or cis and trans isomers of disubstituted cyclic groups. An invention compound includes any cis, trans, syn, anti, entgegen (E), or zusammen (Z) isomer of the compound, as well as mixtures thereof.

10 Certain invention compounds can exist as two or more tautomeric forms. Tautomeric forms of the invention compounds may interchange, for example, via enolization/de-enolization, 1,2-hydride, 1,3-hydride, or 1,4-hydride shifts, and the like. An invention compound includes any tautomeric form of the compound, as well as mixtures thereof.

15 Some compounds of the present invention have alkenyl groups, which may exist as entgegen or zusammen conformations, in which case all geometric forms thereof, both entgegen and zusammen, *cis* and *trans*, and mixtures thereof, are within the scope of the present invention.

20 Some compounds of the present invention have cycloalkyl groups, which may be substituted at more than one carbon atom, in which case all geometric forms thereof, both *cis* and *trans*, and mixtures thereof, are within the scope of the present invention.

It should be appreciated that in the Summary of the Invention above, the term "Embodiment" refers to an aspect of this invention. The Embodiments in the Summary of the Invention are numbered for ease of referral.

25 The invention compounds also include isotopically-labelled compounds, which are identical to those recited above, but for the fact that one or more atoms are replaced by an atom having an atomic mass or mass number different from the atomic mass or mass number usually found in nature. Examples of isotopes that can be incorporated into compounds of the invention include isotopes of hydrogen, carbon, nitrogen, oxygen, phosphorous, fluorine and chlorine, such as ^2H , ^3H , ^{13}C , ^{14}C , ^{15}N , ^{18}O , ^{17}O , ^{31}P , ^{32}P , ^{35}S , ^{18}F and ^{36}Cl , respectively. Compounds of the present invention and pharmaceutically acceptable salts of said compounds which contain the aforementioned isotopes and/or other isotopes of other atoms

are within the scope of this invention. Certain isotopically labelled compounds of the present invention, for example those into which radioactive isotopes such as ^3H and ^{14}C are incorporated, are useful in drug and/or substrate tissue distribution assays. Tritiated, i.e., ^3H and carbon-14, i.e., ^{14}C , isotopes are particularly preferred for their ease of preparation and detectability. Further, substitution with heavier isotopes such as deuterium, i.e., ^2H , can afford certain therapeutic advantages resulting from greater metabolic stability, for example increased in vivo half-life or reduced dosage requirements and, hence, may be preferred in some circumstances. Isotopically labelled compounds of those described above in this invention can generally be prepared by carrying out the procedures incorporated by reference above or disclosed in the Schemes and/or in the Examples and Preparations below, by substituting a readily available isotopically labelled reagent for a non-isotopically labelled reagent.

All of the above-described forms of an invention compound are included by the phrase "invention compound", a "compound of Formula I", a "compound of Formula I, or a pharmaceutically acceptable salt thereof", or any named species thereof, unless specifically excluded therefrom.

One of ordinary skill in the art will appreciate that the compounds of the invention are useful in treating a diverse array of diseases. One of ordinary skill in the art will also appreciate that when using the compounds of the invention in the treatment of a specific disease that the compounds of the invention may be combined with various existing therapeutic agents used for that disease.

For the treatment of rheumatoid arthritis, the compounds of the invention may be combined with agents such as TNF- α inhibitors such as anti-TNF monoclonal antibodies and TNF receptor immunoglobulin molecules (such as Enbrel®), low dose methotrexate, lefunimide, hydroxychloroquine, d-penicillamine, auranofin or parenteral or oral gold.

The compounds of the invention can also be used in combination with existing therapeutic agents for the treatment of osteoarthritis. Suitable agents to be used in combination include standard non-steroidal anti-inflammatory agents (hereinafter NSAID's) such as piroxicam, diclofenac, propionic acids such as naproxen, flurbiprofen, fenoprofen, ketoprofen and ibuprofen, fenamates such as

mefenamic acid, indomethacin, sulindac, apazone, pyrazolones such as phenylbutazone, salicylates such as aspirin, COX-2 inhibitors such as etoricoxib and rofecoxib, analgesics and intraarticular therapies such as corticosteroids and hyaluronic acids such as hyalgan and synvisc.

5 This invention also relates to a method of or a pharmaceutical composition for treating inflammatory processes and diseases comprising administering a compound of this invention to a mammal, including a human, cat, livestock or dog, wherein said inflammatory processes and diseases are defined as above and said inhibitory compound is used in combination with one or more other therapeutically active agents under the following conditions:

- 10 A.) where a joint has become seriously inflamed as well as infected at the same time by bacteria, fungi, protozoa and/or virus, said inhibitory compound is administered in combination with one or more antibiotic, antifungal, antiprotozoal and/or antiviral therapeutic agents;
- 15 B.) where a multi-fold treatment of pain and inflammation is desired, said inhibitory compound is administered in combination with inhibitors of other mediators of inflammation, comprising one or more members independently selected from the group consisting essentially of:
- (1) NSAIDs;
 - (2) H₁-receptor antagonists;
 - (3) kinin-B₁- and B₂-receptor antagonists;
 - (4) prostaglandin inhibitors selected from the group consisting of PGD-, PGF-, PGI₂- and PGE-receptor antagonists;
 - (5) thromboxane A₂ (TXA₂-) inhibitors;
 - (6) 5-, 12- and 15-lipoxygenase inhibitors;
 - (7) leukotriene LTC₄-, LTD₄/LTE₄- and LTB₄-inhibitors;
 - (8) PAF-receptor antagonists;
 - (9) gold in the form of an aurothio group together with one or more hydrophilic groups;
 - 20 (10) immunosuppressive agents selected from the group consisting of cyclosporine, azathioprine and methotrexate;
 - (11) anti-inflammatory glucocorticoids;
 - (12) penicillamine;

(13) hydroxychloroquine;

(14) anti-gout agents including colchicine; xanthine oxidase inhibitors including allopurinol; and uricosuric agents selected from probenecid, sulfapyrazone and benzbromarone;

5 C. where older mammals are being treated for disease conditions, syndromes and symptoms found in geriatric mammals, said inhibitory compound is administered in combination with one or more members independently selected from the group consisting essentially of:

(1) cognitive therapeutics to counteract memory loss and impairment;

10 (2) anti-hypertensives and other cardiovascular drugs intended to offset the consequences of atherosclerosis, hypertension, myocardial ischemia, angina, congestive heart failure and myocardial infarction, selected from the group consisting of:

a. diuretics;

15 b. vasodilators;

c. β -adrenergic receptor antagonists;

d. angiotensin-II converting enzyme inhibitors (ACE-inhibitors), alone or optionally together with neutral endopeptidase inhibitors;

e. angiotensin II receptor antagonists;

20 f. renin inhibitors;

g. calcium channel blockers;

h. sympatholytic agents;

i. α_2 -adrenergic agonists;

j. α -adrenergic receptor antagonists; and

25 k. HMG-CoA-reductase inhibitors (anti-hypercholesterolemics);

(3) antineoplastic agents selected from:

a. antimitotic drugs selected from:

i. vinca alkaloids selected from:

[1] vinblastine and

30 [2] vincristine;

(4) growth hormone secretagogues;

(5) strong analgesics;

(6) local and systemic anesthetics; and

(7) H₂ -receptor antagonists, proton pump inhibitors and other gastroprotective agents.

The active ingredient of the present invention may be administered in combination with inhibitors of other mediators of inflammation, comprising one or more members selected from the group consisting essentially of the classes of such inhibitors and examples thereof which include, matrix metalloproteinase inhibitors, aggrecanase inhibitors, TACE inhibitors, leucotriene receptor antagonists, IL-1 processing and release inhibitors, Lira, H₁ -receptor antagonists; kinin-B₁ - and B₂ -receptor antagonists; prostaglandin inhibitors such as PGD-, PGF- PGI₂ - and PGE-receptor antagonists; thromboxane A₂ (TXA2-) inhibitors; 5- and 12-lipoxygenase inhibitors; leukotriene LTC₄ -, LTD₄/LTE₄ - and LTB₄ - inhibitors; PAF-receptor antagonists; gold in the form of an aurothio group together with various hydrophilic groups; immunosuppressive agents, e.g., cyclosporine, azathioprine and methotrexate; anti-inflammatory glucocorticoids; penicillamine; hydroxychloroquine; anti-gout agents, e.g., colchicine, xanthine oxidase inhibitors, e.g., allopurinol and uricosuric agents, e.g., probenecid, sulfinpyrazone and benzboromarone.

The compounds of the present invention may also be used in combination with anticancer agents such as endostatin and angiostatin or cytotoxic drugs such as adriamycin, daunomycin, cis-platinum, etoposide, taxol, taxotere and alkaloids, such as vincristine and antimetabolites such as methotrexate.

The compounds of the present invention may also be used in combination with anti-hypertensives and other cardiovascular drugs intended to offset the consequences of atherosclerosis, including hypertension, myocardial ischemia including angina, congestive heart failure and myocardial infarction, selected from vasodilators such as hydralazine, β-adrenergic receptor antagonists such as propranolol, calcium channel blockers such as nifedipine, α₂-adrenergic agonists such as clonidine, α-adrenergic receptor antagonists such as prazosin and HMG-CoA-reductase inhibitors (anti-hypercholesterolemics) such as lovastatin or atorvastatin.

The compounds of the present invention may also be administered in combination with one or more antibiotic, antifungal, antiprotozoal, antiviral or similar therapeutic agents.

5 The compounds of the present invention may also be used in combination with CNS agents such as antidepressants (such as sertraline), anti-Parkinsonian drugs (such as L-dopa, requip, mirapex, MAOB inhibitors such as selegiline and rasagiline, comP inhibitors such as Tasmar, A-2 inhibitors, dopamine reuptake inhibitors, NMDA antagonists, nicotine agonists, dopamine agonists and inhibitors of neuronal nitric oxide synthase) and anti-Alzheimer's drugs such as
10 donepezil, tacrine, COX-2 inhibitors, propentofylline or metryfonate.

The compounds of the present invention may also be used in combination with osteoporosis agents such as roloxifene, lasofoxifene, droloxifene or fosomax and immunosuppressant agents such as FK-506 and rapamycin.

15 The invention compounds may be used in combination with a COX-2 selective inhibitor, more preferably celecoxib (e.g., CELEBREX®), valdecoxib (e.g., BEXTRA®), parecoxib, lumiracoxib (e.g., PREXIGE®), or rofecoxib (e.g., VIOXX®), or with compounds such as etanercept (e.g., ENBREL®), infliximab (e.g., REMICADE®), leflunomide, (e.g., ARAVA®) or methotrexate, and the like.

20 The invention compounds may be used in combination with biological therapeutics useful for treating arthritic conditions, including CP-870, etanercept (a tumor necrosis factor alpha ("TNF-alpha") receptor immunoglobulin molecule; trade names ENBREL® and ENBREL ENTANERCEPT® by Immunex Corporation, Seattle, Washington), infliximab (an anti-TNF-alpha chimeric IgG 1K monoclonal antibody; tradename REMICADE® by Centocor, Inc., Malvern, Pennsylvania), methotrexate (tradename RHEUMATREX® by American Cyanamid Company, Wayne, New Jersey), and adalimumab (a human monoclonal anti-TNF-alpha antibody; tradename HUMIRA® by Abbott Laboratories, Abbott Park, Illinois).

25

30 The present invention also relates to the formulation of a compound of the present invention alone or with one or more other therapeutic agents which are to form the intended combination, including wherein said different drugs have varying half-lives, by creating controlled-release forms of said drugs with

different release times which achieves relatively uniform dosing; or, in the case of non-human patients, a medicated feed dosage form in which said drugs used in the combination are present together in admixture in the feed composition. There is further provided in accordance with the present invention co-administration in
5 which the combination of drugs is achieved by the simultaneous administration of said drugs to be given in combination; including co-administration by means of different dosage forms and routes of administration; the use of combinations in accordance with different but regular and continuous dosing schedules whereby desired plasma levels of said drugs involved are maintained in the patient being
10 treated, even though the individual drugs making up said combination are not being administered to said patient simultaneously.

The invention method is useful in human and veterinary medicines for treating mammals suffering from one or more of the above-listed diseases and disorders.

15 All that is required to practice a method of this invention is to administer a compound of Formula I, or a pharmaceutically acceptable salt thereof, in an amount that is therapeutically effective for preventing, inhibiting, or reversing the condition being treated. The invention compound can be administered directly or in a pharmaceutical composition as described below.

20 A therapeutically effective amount, or, simply, effective amount, of an invention compound will generally be from about 1 to about 300 mg/kg of subject body weight of the compound of Formula I, or a pharmaceutically acceptable salt thereof. Typical doses will be from about 10 to about 5000 mg/day for an adult subject of normal weight for each component of the combination. In a clinical
25 setting, regulatory agencies such as, for example, the Food and Drug Administration ("FDA") in the U.S. may require a particular therapeutically effective amount.

30 In determining what constitutes a nontoxic effective amount or a therapeutically effective amount of an invention compound for treating, preventing, or reversing one or more symptoms of any one of the diseases and disorders described above that are being treated according to the invention methods, a number of factors will generally be considered by the medical practitioner or veterinarian in view of the experience of the medical practitioner or

veterinarian, including the Food and Drug Administration guidelines, or guidelines from an equivalent agency, published clinical studies, the subject's (e.g., mammal's) age, sex, weight and general condition, as well as the type and extent of the disease, disorder or condition being treated, and the use of other medications, if any, by the subject. As such, the administered dose may fall within the ranges or concentrations recited above, or may vary outside them, ie, either below or above those ranges, depending upon the requirements of the individual subject, the severity of the condition being treated, and the particular therapeutic formulation being employed. Determination of a proper dose for a particular situation is within the skill of the medical or veterinary arts. Generally, treatment may be initiated using smaller dosages of the invention compound that are less than optimum for a particular subject. Thereafter, the dosage can be increased by small increments until the optimum effect under the circumstance is reached. For convenience, the total daily dosage may be divided and administered in portions during the day, if desired.

Pharmaceutical compositions, described briefly here and more fully below, of an invention combination may be produced by formulating the invention combination in dosage unit form with a pharmaceutical carrier. Some examples of dosage unit forms are tablets, capsules, pills, powders, aqueous and nonaqueous oral solutions and suspensions, and parenteral solutions packaged in containers containing either one or some larger number of dosage units and capable of being subdivided into individual doses. Alternatively, the invention compounds may be formulated separately.

Some examples of suitable pharmaceutical carriers, including pharmaceutical diluents, are gelatin capsules; sugars such as lactose and sucrose; starches such as corn starch and potato starch; cellulose derivatives such as sodium carboxymethyl cellulose, ethyl cellulose, methyl cellulose, and cellulose acetate phthalate; gelatin; talc; stearic acid; magnesium stearate; vegetable oils such as peanut oil, cottonseed oil, sesame oil, olive oil, corn oil, and oil of theobroma; propylene glycol, glycerin; sorbitol; polyethylene glycol; water; agar; alginic acid; isotonic saline, and phosphate buffer solutions; as well as other compatible substances normally used in pharmaceutical formulations.

The compositions to be employed in the invention can also contain other components such as coloring agents, flavoring agents, and/or preservatives. These materials, if present, are usually used in relatively small amounts. The compositions can, if desired, also contain other therapeutic agents commonly employed to treat any of the above-listed diseases and disorders.

The percentage of the active ingredients of a compound of Formula I, or a pharmaceutically acceptable salt thereof, in the foregoing compositions can be varied within wide limits, but for practical purposes it is preferably present in a total concentration of at least 10% in a solid composition and at least 2% in a primary liquid composition. The most satisfactory compositions are those in which a much higher proportion of the active ingredients are present, for example, up to about 95%.

Preferred routes of administration of an invention compound are oral or parenteral. However, another route of administration may be preferred depending upon the condition being treated. For example, topical administration or administration by injection may be preferred for treating conditions localized to the skin or a joint. Administration by transdermal patch may be preferred where, for example, it is desirable to effect sustained dosing.

It should be appreciated that the different routes of administration may require different dosages. For example, a useful intravenous ("IV") dose is between 5 and 50 mg, and a useful oral dosage is between 20 and 800 mg, of a compound of Formula I, or a pharmaceutically acceptable salt thereof. The dosage is within the dosing range used in treatment of the above-listed diseases, or as would be determined by the needs of the patient as described by the physician.

The invention compounds may be administered in any form. Preferably, administration is in unit dosage form. A unit dosage form of the invention compound to be used in this invention may also comprise other compounds useful in the therapy of diseases described above. A further description of pharmaceutical formulations useful for administering the invention compounds and invention combinations is provided below.

The active components of the invention combinations, may be formulated together or separately and may be administered together or separately. The particular formulation and administration regimens used may be tailored to the

particular patient and condition being treated by a practitioner of ordinary skill in the medical or pharmaceutical arts.

The advantages of using an invention compound in a method of the instant invention include the nontoxic nature of the compounds at and substantially above therapeutically effective doses, their ease of preparation, the fact that the compounds are well-tolerated, and the ease of topical, IV, or oral administration of the drugs.

Another important advantage is that the present invention compounds more effectively target a particular disease that is responsive to inhibition of MMP-13 with fewer undesirable side effects than similar compounds that inhibit MMP-13 that are not invention compounds. This is so because the instant invention compounds of Formula I, or a pharmaceutically acceptable salt thereof, do not directly, or indirectly via a bridging water molecule, ligate, coordinate to, or bind to the catalytic zinc cation of MMP-13, but instead bind at a different location from where natural substrate binds to MMP-13. The binding requirements of an allosteric MMP-13 binding site are unique to MMP-13, and account for the specificity of the invention compounds for inhibiting MMP-13 over any other MMP enzyme. This binding mode has not been reported in the art. Indeed, prior art inhibitors of MMP-13 bind to the catalytic zinc cations of other MMP enzymes as well as to the catalytic zinc cation of MMP-13, and are consequently significantly less selective inhibitors of MMP-13 enzyme.

The invention compounds which are invention compounds, and pharmaceutically acceptable salts thereof, are thus therapeutically superior to other inhibitors of MMP-13, or even tumor necrosis factor-alpha converting enzyme (“TACE”), because of fewer undesirable side effects from inhibition of the other MMP enzymes or TACE. For example, virtually all prior art MMP inhibitors tested clinically to date have exhibited an undesirable side effect known as musculoskeletal syndrome (“MSS”). MSS is associated with administering an inhibitor of multiple MMP enzymes or an inhibitor of a particular MMP enzyme such as MMP-1. MSS will be significantly reduced in type and severity by administering the invention compound instead of any prior art MMP-13 inhibitor, or a pharmaceutically acceptable salt thereof. The invention compounds are superior to similar compounds that interact with the catalytic zinc cation of the

MMP-13 enzyme as discussed above, even if similar compounds show some selectivity for the MMP-13.

It is expected that nearly all, if not all, compounds of Formula I, or pharmaceutically acceptable salts thereof, are invention compounds.

5 This advantage of the instant compounds will also significantly increase the likelihood that agencies which regulate new drug approvals, such as the United States Food and Drug Administration, will approve the instant compounds versus a competing similar compound that does not allosterically bind to MMP-13 as discussed above even in the unlikely event that the two compounds behaved
10 similarly in clinical trials. These regulatory agencies are increasingly aware that clinical trials, which test drug in limited population groups, do not always uncover safety problems with a drug, and thus all other things being equal, the agencies will favor the drug with the lowest odds of producing undesirable side effects.

Another important advantage is that the disease modifying properties of
15 the invention compounds provide patients suffering from cartilage damage, arthritis, preferably osteoarthritis, inflammation and/or pain with both relief of symptoms and prevention or inhibition of the underlying disease pathology such as cartilage degradation. There is no currently approved drug for disease modification of cartilage damage, including in osteoarthritis.

20 Any invention compound is readily available, either commercially, or by synthetic methodology, well known to those skilled in the art of organic chemistry. For specific syntheses, see the examples below and the preparations of invention compound outlined in the Schemes below.

Intermediates for the synthesis of a compound of Formula I, or a
25 pharmaceutically acceptable salt thereof, may be prepared by one of ordinary skill in the art of organic chemistry by adapting various synthetic procedures incorporated by reference above or that are well-known in the art of organic chemistry. These synthetic procedures may be found in the literature in, for example, *Reagents for Organic Synthesis*, by Fieser and Fieser, John Wiley & Sons, Inc, New York, 2000; *Comprehensive Organic Transformations*, by Richard C. Larock, VCH Publishers, Inc, New York, 1989; the series *Compendium of Organic Synthetic Methods*, 1989, by Wiley-Interscience; the text *Advanced*

Organic Chemistry, 4th edition, by Jerry March, Wiley-Interscience, New York, 1992; or the Handbook of Heterocyclic Chemistry by Alan R. Katritzky, Pergamon Press Ltd, London, 1985, to name a few. Alternatively, a skilled artisan may find methods useful for preparing the intermediates in the chemical literature
5 by searching widely available databases such as, for example, those available from the Chemical Abstracts Service, Columbus, Ohio, or MDL Information Systems GmbH (formerly Beilstein Information Systems GmbH), Frankfurt, Germany.

Preparations of the invention compounds may use starting materials,
10 reagents, solvents, and catalysts that may be purchased from commercial sources or they may be readily prepared by adapting procedures in the references or resources cited above. Commercial sources of starting materials, reagents, solvents, and catalysts useful in preparing invention compounds include, for example, The Aldrich Chemical Company, and other subsidiaries of Sigma-Aldrich Corporation, St. Louis, Missouri, BACHEM, BACHEM A.G.,
15 Switzerland, or Lancaster Synthesis Ltd, United Kingdom.

Syntheses of some invention compounds may utilize starting materials, intermediates, or reaction products that contain a reactive functional group. During chemical reactions, a reactive functional group may be protected from
20 reacting by a protecting group that renders the reactive functional group substantially inert to the reaction conditions employed. A protecting group is introduced onto a starting material prior to carrying out the reaction step for which a protecting group is needed. Once the protecting group is no longer needed, the protecting group can be removed. It is well within the ordinary skill in the art to introduce protecting groups during a synthesis of a compound of Formula I, or a pharmaceutically acceptable salt thereof, and then later remove them. Procedures
25 for introducing and removing protecting groups are known and referenced such as, for example, in Protective Groups in Organic Synthesis, 2nd ed., Greene T.W. and Wuts P.G., John Wiley & Sons, New York: New York, 1991, which is hereby incorporated by reference.
30

Thus, for example, protecting groups such as the following may be utilized to protect amino, hydroxyl, and other groups: carboxylic acyl groups such as, for

example, formyl, acetyl, and trifluoroacetyl; alkoxy carbonyl groups such as, for example, ethoxycarbonyl, tert-butoxycarbonyl (BOC), β,β,β -trichloroethoxycarbonyl (TCEC), and β -idoethoxycarbonyl; aralkyloxycarbonyl groups such as, for example, benzyloxycarbonyl (CBZ), para-methoxybenzyloxycarbonyl, and 9-fluorenylmethyloxycarbonyl (FMOC); trialkylsilyl groups such as, for example, trimethylsilyl (TMS) and tert-butyldimethylsilyl (TBDMS); and other groups such as, for example, triphenylmethyl (trityl), tetrahydropyranyl, vinyloxycarbonyl, ortho-nitrophenylsulfenyl, diphenylphosphinyl, para-toluenesulfonyl (Ts), mesyl, trifluoromethanesulfonyl, and benzyl. Examples of procedures for removal of protecting groups include hydrogenolysis of CBZ groups using, for example, hydrogen gas at 50 psi in the presence of a hydrogenation catalyst such as 10% palladium on carbon, acidolysis of BOC groups using, for example, hydrogen chloride in dichloromethane, trifluoroacetic acid (TFA) in dichloromethane, and the like, reaction of silyl groups with fluoride ions, and reductive cleavage of TCEC groups with zinc metal.

Compounds of Formula I may be prepared according to any number of synthetic routes.

The 2,6-dioxo-pyrazinyl compounds may be prepared by a variety of methods known to those skilled in the art. Some general syntheses are set forth in Scheme 1. Thus, an appropriately substituted α -amino acid (i) can be functionalized by standard organic transformations to give the α -imino-carboxamide (ii). This in turn can be cyclized in a manner similar to that described by Perrotta, et al. (J. Comb. Chem., 3(5), pp453-60, 2001) to give the compounds of the present application.

Alternatively, an appropriately substituted α -amino acid (i) can be reacted with an aldehyde (iii) and an isocyanide (iv) in an intramolecular Ugi reaction as demonstrated by Ugi, et al. (Heterocycles, 47(2), pp965-75, 1998) to give the compounds of the present application.

Lastly, an appropriately substituted α -amino acid carboxamide (v) can be cyclized with an oxalic acid derivative (vi) to generate a tri-oxo-pyrazinyl intermediate (vii) as demonstrated by Person and Le Corre (Bull. Soc. Chim. Fr.,

(5), p673, 1989). Simple N-alkylation of this intermediate can furnish the compounds of the present application.

Scheme 1.

The 6-oxo-pyridazinyl compounds may be prepared by a variety of methods known to those skilled in the art. Some general syntheses are set forth in Scheme 2.

Thus, an appropriately substituted α -keto hydrazone (viii) can be condensed with an activated methylene ester (ix) to give the requisite pyridazine ring system (x). This ring formation is precedented in the literature (Ibrahim, et al., Indian J. Chem. Sect. B: Org Chem Incl. Med. Chem., 36(7), pp612-6, 1997; Sotelo, et al., Synth. Commun. 27(14), pp2419-23, 1997; Al-Omran, et al., Synthesis (1), pp 91-4, 1997; and Al-Naggar, et al., J. Chem. Res. Synop., (11), pp 648-9, 1999). The group Rc may already be in the form of R¹-Q- or it may be readily transformed into the R¹-Q moiety using standard chemical transformations known to those skilled in the art of organic chemistry. Likewise, the group Rb may encompass the moiety V¹-R² or may easily be transformed into said group to give the compounds of the present application.

The ring system (x) may also be transformed into another embodiment of the current application. Thus, the group Ra may already be in the form of R¹-Q or it may be readily transformed into the R¹-Q moiety using standard chemical transformations known to those skilled in the art of organic chemistry. Likewise, the group Rb may encompass the moiety V¹-R² or may easily be transformed into said group to give additional compounds of the present application.

Alternatively, an appropriately substituted α -hydroxy- γ -keto carboxylic acid (xi) may be condensed with hydrazine, as described by Amer, et al. (J. Prakt. Chem./Chem. Ztg., (339)(1), pp20-5, 1997) or Coates an McKillop (Synthesis, pp 334-42, 1993) to give the NH pyridazine compounds (xii). The group R may already be in the form of R¹-Q or it may be readily transformed into the R¹-Q moiety using standard chemical transformations known to those skilled in the art of organic chemistry. The NH can easily be functionalized to incorporate the V¹-R² moiety producing the compounds of the present application.

The pyridazine system (xii) may also provides access to other compounds of the present application. Thus, the group Ra may already be in the form of R¹-Q or it may be readily transformed into the R¹-Q moiety using standard chemical transformations known to those skilled in the art of organic chemistry. The NH can easily be functionalized to incorporate the V¹-R² moiety producing additional compounds of the present application.

Scheme 2.

The diketopiperazines can be readily formed from 2 α -amino acid

analogues as set forth in Scheme 3. Thus, an appropriately substituted α -amino
5 acid (xiii) can be condensed with another appropriately substituted α -amino acid
(xiv) to generate the diketopiperazine (xv). The group R may already be in the
form of R^1-Q or it may be readily transformed into the R^1-Q moiety using

standard chemical transformations known to those skilled in the art of organic chemistry. Likewise, the group Rb may encompass the moiety V¹-R² or may easily be transformed into said group to give the compounds of the present application (xvi). Oxidizing (xvi) with an oxidant such as DDQ incorporates a double bond into the ring as in (xvii) to give additional compounds of the present application.

5

Scheme 3.

A few select methods for forming thiadiazines are set forth in Scheme 4.

10 Thus, an appropriately substituted amino acrylate (xviii) can be condensed with N-chlorosulfonyl isocyanate to generate the trioxo-thiadiazines (xix) as described by Bischoff and Schroede (J. Prakt. Chem./Chem. Ztg. 334(8), pp 711-5, 1992). The group R may already be in the form of R¹-Q or it may be readily transformed into the R¹-Q moiety using standard chemical transformations known to those skilled in the art of organic chemistry. The ring NH can easily be functionalized to incorporate the V¹-R² moiety producing the compounds of the present application.

15

Alternatively, condensing an appropriately substituted imino-sulfonamide (xx) with a β -carboxaldehyde ester (or a related acetal) gives a series of dioxo-

thiadiazines (xxi) as described by Lee, et al. (Bull. Korean Chem. Soc. 13(5), pp 462-3, 1992). The group R may already be in the form of R^1 -Q or it may be readily transformed into the R^1 -Q moiety using standard chemical transformations known to those skilled in the art of organic chemistry. The ring NH can easily be 5 functionalized to incorporate the V^1 - R^2 moiety producing the compounds of the present application.

Another synthesis involves condensing an appropriately substituted amino-sulfonamide (xxii) with a malonic acid derivative to give the tetraoxo-thiadiazine 10 (xxiii) as described by Herrero, et al., Arch. Pharm. 325(8), pp 509-14, 1992). The group R may already be in the form of R^1 -Q or it may be readily transformed into the R^1 -Q moiety using standard chemical transformations known to those skilled in the art of organic chemistry. Likewise, the group Ra may encompass the moiety V^1 - R^2 or may easily be transformed into said group to give the compounds of the present application.

Scheme 4.

Alternatively, one of ordinary skill in the art of organic chemistry may
 5 prepare compounds of Formula I by adapting methods known in the art. For example, the skilled artisan may prepare compounds of Formula I wherein D is

by adapting methods described or referenced in United States Patent Application
Publication number 2002049320 A1 and abstracted at Chemical Abstract number
2002:315486 (HCAPLUS file) and at Chemical Abstract number 136:340706
5 (CA file).

Further, the skilled artisan may prepare compounds of Formula I wherein
D is

by adapting methods described or referenced in PCT International Application
10 Publication number WO 2000/043369.

Further, the skilled artisan may prepare compounds of Formula I wherein
D is

by adapting methods described or referenced in United States Patent Numbers
15 3,770,717 and 3,507,864.

Further, the skilled artisan may prepare compounds of Formula I wherein
D is

by adapting methods described or referenced in United States Patent number
20 6,294,668.

Further, the skilled artisan may prepare compounds of Formula I wherein
D is

by adapting methods described or referenced in Canadian Patent number 2,228,875 AA and European Patent number 863 150 A1.

Further, the skilled artisan may prepare compounds of Formula I wherein

5 D is

by adapting methods described or referenced in United States Patent number 5,019,587 A and European Patent Application Patent number 344 634 B1.

It should be appreciated that when Q is trans-(H)C=C(H), cis-(H)C=C(H),
10 C≡C, CH₂C≡C, or CF₂C≡C and is bonded to a sp² carbon atom in group D, a palladium catalyzed coupling of the corresponding terminal olefin or alkyne of formulas R¹-(trans-(H)C=CH₂), R¹-(cis-(H)C=CH₂), R¹-C≡CH, R¹-CH₂C≡CH, or R¹-CF₂C≡CH, wherein R¹ is as defined above, with a bromo- or iodo-substituted sp² carbon atom of formula:

15

in the presence of a suitable base will yield a compound of Formula I wherein Q is trans-(H)C=C(H), cis-(H)C=C(H), C≡C, CH₂C≡C, or CF₂C≡C and D is a group that is bonded to Q at a sp² carbon atom, and R¹, V, and R² are as defined above for Formula I. Illustrative examples of the coupling reagents and catalysts include palladium tetrakis(triphenylphosphine) or palladium(II) acetate as catalyst, a tertiary organic amine base such as triethylamine or diisopropylethylamine, a suitable solvent such as dimethylformamide ("DMF") or tetrahydrofuran ("THF"), and optionally a co-catalyst such as copper(I)iodide, at a suitable temperature such

as from 0°C to 100°C, for a suitable time such as from 30 minutes to 2 days, and under an inert atmosphere such as an atmosphere of nitrogen or argon gas.

Alternatively, a corresponding aldehyde of formula

5 prepared as described below, may be coupled with a phosphonium ylide under
Wittig olefination, or Horner-Emmons olefination, conditions to give a compound
of Formula I wherein Q is trans-(H)C=C(H).

The bromo or iodo intermediates described above may be converted by conventional means to the corresponding carboxylic acid of formula

10

and the carboxylic acid converted by conventional means to compounds of Formula I wherein Q is OC(O), CH(R⁶)C(O), OC(NR⁶), CH(R⁶)C(NR⁶), N(R⁶)C(O), N(R⁶)C(S), N(R⁶)C(NR⁶), SC(O), CH(R⁶)C(S), or SC(NR⁶).

Illustrative examples include coupling of the carboxylic acid with an amine to provide a compound of Formula I wherein Q is $N(R^6)C(O)$, and optionally sulfurating the resulting amide with, for example P_2S_5 to provide a compound of Formula I wherein Q is $N(R^6)C(S)$. Alternatively, the carboxylic acid may be coupled with an alcohol to provide a compound of Formula I wherein Q is $OC(O)R'$.

Alternatively, the carboxylic acid may be reduced to the corresponding hydroxymethyl compound of formula

and the hydroxymethyl converted to a compound of Formula I wherein Q is OCH_2 or $\text{N}(\text{R}^6)\text{CH}_2$ by conventional means.

Alternatively, the hydroxymethyl compound may be oxidized to the corresponding aldehyde of formula

and the aldehyde coupled with hydroxylamine to give a corresponding oxime. The
5 oxime may be chlorinated, and the chlorooxime cyclized with an olefin or alkyne
to give a compound of Formula I wherein Q is a 5-membered heteroarylene.

10 Alternatively, the aldehyde may be prepared from the corresponding carboxylic acid by coupling the carboxylic acid with N,O-dimethylhydroxylamine and reducing the resulting dimethylhydroxamide with a suitable hydride reducing agent such as sodium borohydride or lithium aluminum hydride.

Alternatively, the above-described carboxylic acid intermediate may be converted by conventional means to the corresponding methyl ketone of formula

15 and the methyl ketone may be halogenated on methyl and coupled with various amines, alcohols, or other halogenated compounds to give a compound of Formula I wherein Q is $\text{CH}(\text{R}^6)\text{C}(\text{O})$.

Alternatively, the above-described carboxylic acid intermediate or bromo- or iodo-intermediates may be converted by conventional means to the corresponding nitrile of formula

20 and the nitrile condensed with an amine or alcohol under non-nucleophilic basic conditions (e.g., 1,8-diazaundecane) to give a compound of Formula I wherein Q is $\text{N}(\text{R}^6)\text{C}(\text{NR}^6)$ or $\text{OC}(\text{NR}^6)$, respectively.

Alternatively, compounds of Formula I wherein Q is a lactam diradical may be prepared by conventional means by cyclizing the corresponding gamma-amino acids.

If the above described synthetic methods are used, the following invention
5 compounds may be prepared by one of ordinary skill in the organic chemistry art.

EXAMPLE 1

4-[5-(3-Benzylcarbamoyl-2,6-dioxo-3,6-dihydro-2H-pyrazin-1-yl)-
tetrazol-2-yl]-benzoic acid

20 The compounds of Formula I can be evaluated in standard assays for their ability to inhibit the catalytic activity of MMP enzymes. The assays used to evaluate the MMP biological activity of the invention compounds are well-known and routinely used by those skilled in the study of MMP inhibitors and their use to treat clinical conditions. For example, compounds of Formula I may be readily identified by assaying a test compound for inhibition of MMP-13 according to Biological Methods 1 or 2, and further assaying the test compound for allosteric inhibition of MMP-13 according to Biological Methods 3 or 4, as described below.

25 The compounds of Formula I are expected to be potent inhibitors of MMP-13 catalytic domain and MMP-13 full length enzyme. Potencies, as measured by IC₅₀'s, with MMP-13 catalytic domain for the invention compounds are expected range from about 0.001 μM to about 50 μM.

Invention compounds can be further screened with full-length MMP-2, full-length MMP-7, full-length MMP-9, and MMP-14 catalytic domain to determine selectivity of the inhibitors with MMP-13 versus the other MMP enzymes also. Selectivities of the invention compounds for MMP-13 catalytic domain versus another MMP enzyme (full-length or catalytic domain), as determined by dividing the IC₅₀ for the inhibitor with a comparator MMP enzyme by the IC₅₀ of the inhibitor with MMP-13 catalytic domain, are expected to range from about 5 to about 50,000 fold.

To determine the inhibitory profiles, the compounds of Formula I have been evaluated in standard assays for their ability to inhibit the catalytic activity of various MMP enzymes. The assays used to evaluate the MMP biological activity of the invention compounds are well-known and routinely used by those skilled in the study of MMP inhibitors and their use to treat clinical conditions.

The assays measure the amount by which a test compound reduces the hydrolysis of a thiopeptolide substrate catalyzed by a matrix metalloproteinase enzyme. Such assays are described in detail by Ye et al., in Biochemistry, 1992;31(45):11231-11235, which is incorporated herein by reference. One such assay is described below in Biological Method 1.

Some of the particular methods described below use the catalytic domain of the MMP-13 enzyme, namely matrix metalloproteinase-13 catalytic domain (“MMP-13CD”), rather than the corresponding full-length enzyme, MMP-13. It has been shown previously by Ye Qi-Zhuang, Hupe D., and Johnson L. (*Current Medicinal Chemistry*, 1996;3:407-418) that inhibitor activity against a catalytic domain of an MMP is predictive of the inhibitor activity against the respective full-length MMP enzyme.

BIOLOGICAL METHOD 1

Thiopeptolide substrates show virtually no decomposition or hydrolysis at or below neutral pH in the absence of a matrix metalloproteinase enzyme. A typical thiopeptolide substrate commonly utilized for assays is Ac-Pro-Leu-Gly-thioester-Leu-Leu-Gly-OEt. A 100 μL assay mixture will contain 50 mM of N-2-hydroxyethylpiperazine-N'-2-ethanesulfonic acid buffer (“HEPES,” pH 7.0),

10 mM CaCl₂, 100 μM thiopeptolide substrate, and 1 mM 5,5'-dithio-bis-(2-nitrobenzoic acid) (DTNB). The thiopeptolide substrate concentration may be varied, for example from 10 to 800 μM to obtain K_m and K_{cat} values. The change in absorbance at 405 nm is monitored on a Thermo Max microplate reader (molecular Devices, Menlo Park, CA) at room temperature (22°C). The calculation of the amount of hydrolysis of the thiopeptolide substrate is based on E₄₁₂ = 13600 M⁻¹ cm⁻¹ for the DTNB-derived product 3-carboxy-4-nitrothiophenoxide. Assays are carried out with and without matrix metalloproteinase inhibitor compounds, and the amount of hydrolysis is compared for a determination of inhibitory activity of the test compounds.

Test compounds were evaluated at various concentrations in order to determine their respective IC₅₀ values, the micromolar concentration of compound required to cause a 50% inhibition of catalytic activity of the respective enzyme.

It should be appreciated that the assay buffer used with MMP-3CD was 50 mM N-morpholinoethane sulfonate ("MES") at pH 6.0 rather than the HEPES buffer at pH 7.0 described above.

The test described above for the inhibition of MMP-13 may also be adapted and used to determine the ability of the compounds of Formula I to inhibit the matrix metalloproteases MMP-1, MMP-2, MMP-3, MMP-7, MMP-9, MMP-12 and MMP-14.

BIOLOGICAL METHOD 2

Some representative compounds of Formula I have been evaluated for their ability to inhibit MMP-13. Inhibitor activity versus other MMPs with the compounds may be determined using, for example, MMP-1FL, which refers to full length interstitial collagenase; MMP-2FL, which refers to full length Gelatinase A; MMP-3CD, which refers to the catalytic domain of stromelysin; MMP-7FL, which refers to full length matrilysin; MMP-9FL, which refers to full length Gelatinase B; MMP-13CD, which refers to the catalytic domain of collagenase 3; and MMP-14CD, which refers to the catalytic domain of MMP-14.

Test compounds can be evaluated at various concentrations in order to determine their respective IC₅₀ values, the micromolar concentration of compound required to cause a 50% inhibition of the hydrolytic activity of the respective enzyme.

The results of the above assays with other MMPs will establish that the 5 compounds of Formula I are potent inhibitors of MMP enzymes, and are especially useful due to their selective inhibition of MMP-13. Because of this potent and selective inhibitory activity, the compounds are especially useful to treat diseases mediated by the MMP enzymes.

Allosteric inhibitors of MMP-13 which are compounds of Formula I may 10 be readily identified by assaying a test compound for inhibition of MMP-13 according to the methods described below in Biological Methods 3 and 4.

BIOLOGICAL METHOD 3

Fluorogenic peptide-1 substrate based assay for identifying compounds of Formula I as allosteric inhibitors of MMP-13:

15 Final assay conditions:

50 mM HEPES buffer (pH 7.0)

10 mM CaCl₂

10 μM fluorogenic peptide-1 ("FP1") substrate

0 or 15 mM acetohydroxamic acid (AcNHOH) = 1 K_d

20 2% DMSO (with or without inhibitor test compound)

0.5 nM MMP-13CD enzyme

Stock solutions:

1) 10X assay buffer: 500 mM HEPES buffer (pH 7.0) plus 100 mM CaCl₂

2) 10 mM FP1 substrate: (Mca)-Pro-Leu-Gly-Leu-(Dnp)-Dpa-Ala-Arg-NH₂

25 (Bachem, M-1895; "A novel coumarin-labeled peptide for sensitive continuous assays of the matrix metalloproteinases," Knight C.G., Willenbrock F., and Murphy, G., FEBS Lett., 1992;296:263-266). Is prepared 10 mM stock by dissolving 5 mg FP1 in 0.457 mL DMSO.

3) 3 M AcNHOH: Is prepared by adding 4 mL H₂O and 1 mL 10X assay buffer

30 to 2.25 g AcNHOH (Aldrich 15,903-4). Adjusting pH to 7.0 with NaOH.

Diluting volume to 10 mL with H₂O. Final solution will contain 3 M AcNHOH, 50 mM HEPES buffer (pH 7.0), and 10 mM CaCl₂.

- 4) AcNHOH dilution buffer: 50 mM HEPES buffer (pH 7.0) plus 10 mM CaCl₂
- 5) MMP-13CD enzyme: Stock concentration = 250 nM.
- 5) Enzyme dilution buffer: 50 mM HEPES buffer (pH 7.0), 10 mM CaCl₂, and 0.005% BRIJ 35 detergent (Calbiochem 203728; Protein Grade, 10%)

Procedure (for one 96-well microplate):

A. Prepared assay mixture:

- 1100 µL 10X assay buffer
10 11 µL 10 mM FP1
 55 µL 3 M AcNHOH or 55 µL AcNHOH dilution buffer
 8500 µL H₂O

B. Diluted MMP-13CD to 5 nM working stock:

- 22 µL MMP-13CD (250 nM)
15 1078 µL enzyme dilution buffer

C. Ran kinetic assay:

1. Dispense 2 µL inhibitor test sample (in 100% DMSO) into well.
2. Add 88 µL assay mixture and mix well, avoiding bubbles.
3. Initiate reactions with 10 µL of 5 nM MMP-13CD; mix well, avoid bubbles.
- 20 4. Immediately measure the kinetics of the reactions at room temperature.

Fluorimeter: F_{max} Fluorescence Microplate Reader & SOFTMAX PRO Version 1.1 software (Molecular Devices Corporation; Sunnyvale, CA 94089).

Protocol menu:

- 25 excitation: 320 nm emission: 405 nm
 run time: 15 min interval: 29 sec
 RFU min: -10 RFU max: 200
 V_{max} points: 32/32

D. Compared % of control activity and/or IC₅₀ with inhibitor test compound

- 30 ±AcNHOH.

Hydrolysis of the fluorogenic peptide-1 substrate, [(Mca)Pro-Leu-Gly-Leu-Dpa-Ala-Arg-NH₂; Bachem, catalog number M-1895], wherein “Mca” is (7-methoxy-coumarin-4-yl)acetyl and “Dpa” is (3-[2,4-dinitrophenyl]-L-2,3-diaminopropionyl), is used to screen for MMP-13 catalytic domain (CD) inhibitors. (Dpa may also be abbreviated as “Dnp”.) Reactions (100 µL) contain 0.05 M Hepes buffer (pH 7), 0.01 M calcium chloride, 0.005% polyoxyethylene (23) lauryl ether (“Brij 35”), 0 or 15 mM acetohydroxamic acid, 10 µM FP1, and 0.1 mM to 0.5 nM inhibitor in DMSO (2% final).

After recombinant human MMP-13CD (0.5 nM final) is added to initiate the reaction, the initial velocity of FP1 hydrolysis is determined by monitoring the increase in fluorescence at 405 nm (upon excitation at 320 nm) continuously for up to 30 minutes on a microplate reader at room temperature. Alternatively, an endpoint read can also be used to determine reaction velocity provided the initial fluorescence of the solution, as recorded before addition of enzyme, is subtracted from the final fluorescence of the reaction mixture. The inhibitor is assayed at different concentration values, such as, for example, 100 µM, 10 µM, 1 µM, 100 nM, 10 nM, and 1 nM. Then the inhibitor concentration is plotted on the X-axis against the percentage of control activity observed for inhibited experiments versus uninhibited experiments (i.e., (velocity with inhibitor) divided by (velocity without inhibitor) × 100) on the Y-axis to determine IC₅₀ values. This determination is done for experiments done in the presence, and experiments done in the absence, of acetohydroxamic acid. Data are fit to the equation: percent control activity = 100/[1+((I)/IC₅₀)slope)], where [I] is the inhibitor concentration, IC₅₀ is the concentration of inhibitor where the reaction rate is 50% inhibited relative to the control, and slope is the slope of the IC₅₀ curve at the curve’s inflection point, using nonlinear least-squares curve-fitting equation regression.

Results may be expressed as an IC₅₀ Ratio (+/-) ratio, which means a ratio of the IC₅₀ of the inhibitor with MMP-13 and an inhibitor to the catalytic zinc of MMP-13, divided by the IC₅₀ of the inhibitor with MMP-13 without the inhibitor to the catalytic zinc of MMP-13. Compounds of Formula I which are allosteric

inhibitors of MMP-13 are expected to have an IC₅₀ Ratio (+/-) ratio of less than 1, and are expected to be synergistic with the inhibitor to the catalytic zinc of MMP-13 such as, for example, AcNHOH. Compounds of Formula I which are not allosteric inhibitors of MMP-13 will be inactive in the assay or will have an IC₅₀ Ratio (+/-) of greater than 1, unless otherwise indicated. Results can be confirmed by kinetics experiments which are well known in the biochemical art.

BIOLOGICAL METHOD 4

10 Fluorogenic peptide-1 based assay for identifying allosteric inhibitors of matrix metalloproteinase-13 catalytic domain ("MMP-13CD"):

In a manner similar to Biological Method 3, an assay is run wherein 1,10-phenanthroline is substituted for acetohydroxamic acid to identify compounds of Formula I.

15 Animal models may be used to establish that the instant compounds of Formula I, or a pharmaceutically acceptable salt thereof, would be useful for preventing, treating, and inhibiting cartilage damage, and thus for treating osteoarthritis, for example. Examples of such animal models are described below in Biological Methods 5 and 6.

20

BIOLOGICAL METHOD 5

Monosodium Iodoacetate-induced Osteoarthritis in Rat Model of Cartilage Damage ("MIA Rat"):

One end result of the induction of osteoarthritis in this model, as determined by histologic analysis, is the development of an osteoarthritic condition within the affected joint, as characterized by the loss of Toluidine blue staining and formation of osteophytes. Associated with the histologic changes is a concentration-dependent degradation of joint cartilage, as evidenced by affects on hind-paw weight distribution of the limb containing the affected joint, the presence of increased amounts of proteoglycan or hydroxyproline in the joint upon biochemical analysis, or histopathological analysis of the osteoarthritic lesions.

Generally, In the MIA Rat model on Day 0, the hind-paw weight differential between the right arthritic joint and the left healthy joint of male Wistar rats (150 g) are determined with an incapacitance tester, model 2KG (Linton Instrumentation, Norfolk, United Kingdom). The incapacitance tester has a chamber on top with an outwardly sloping front wall that supports a rat's front limbs, and two weight sensing pads, one for each hind paw, that facilitates this determination. Then the rats are anesthetized with isofluorine, and the right, hind leg knee joint is injected with 1.0 mg of mono-iodoacetate ("MIA") thorough the infrapatellar ligament. Injection of MIA into the joint results in the inhibition of glycolysis and eventual death of surrounding chondrocytes. The rats are further administered either an invention compound or vehicle (in the instant case, water) daily for 14 days or 28 days. The invention compound is typically administered at a dose of 30 mg per kilogram of rat per day (30 mg/kg/day), but the invention compound may be administered at other doses such as, for example, 10 mg/kg/day, 60 mg/kg/day, 90-mg/kg/day, or 100 mg/kg/day according to the requirements of the compound being studied. It is well within the level of ordinary skill in the pharmaceutical arts to determine a proper dosage of an invention compound in this model. Administration of the invention compound in this model is optionally by oral administration or intravenous administration via an osmotic pump. After 7 and 14 days for a two-week study, or 7, 14, and 28 days for a four-week study, the hind-paw weight distribution is again determined. Typically, the animals administered vehicle alone place greater weight on their unaffected left hind paw than on their right hind paw, while animals administered an invention compound show a more normal (i.e., more like a healthy animal) weight distribution between their hind paws. This change in weight distribution was proportional to the degree of joint cartilage damage. Percent inhibition of a change in hind paw joint function is calculated as the percent change in hind-paw weight distribution for treated animals versus control animals. For example, for a two week study,

Percent inhibition of a change in hind paw weight distribution

$$= \left\{ 1 - \left[\frac{(\Delta W_G)}{(\Delta W_C)} \right] \right\} \times 100$$

wherein: ΔW_C is the hind-paw weight differential between the healthy left limb and the arthritic limb of the control animal administered vehicle alone, as measured on Day 14; and

5 ΔW_G is the hind-paw weight differential between the healthy left limb and the arthritic limb of the animal administered an invention compound, as measured on Day 14.

In order to measure biochemical or histopathological end points in the MIA Rat model, some of the animals in the above study may be sacrificed, and
10 the amounts of free proteoglycan in both the osteoarthritic right knee joint and the contralateral left knee joint may be determined by biochemical analysis. The amount of free proteoglycan in the contralateral left knee joint provides a baseline value for the amount of free proteoglycan in a healthy joint. The amount of proteoglycan in the osteoarthritic right knee joint in animals administered an
15 invention compound, and the amount of proteoglycan in the osteoarthritic right knee joint in animals administered vehicle alone, are independently compared to the amount of proteoglycan in the contralateral left knee joint. The amounts of proteoglycan lost in the osteoarthritic right knee joints are expressed as percent loss of proteoglycan compared to the contralateral left knee joint control. The
20 percent inhibition of proteoglycan loss, may be calculated as $\{[(\text{proteoglycan loss from joint (\%) with vehicle}) - (\text{proteoglycan loss from joint with an invention compound})] \div (\text{proteoglycan loss from joint (\%) with vehicle})\} \times 100$.

The MIA Rat data that are expected from the analysis of proteoglycan loss would establish that an invention compound is effective for inhibiting cartilage
25 damage and inflammation and/or alleviating pain in mammalian patients, including human.

The results of these studies with oral dosing may be presented in tabular format in the columns labelled “IJFL (%+/- SEM)”, wherein IJFL means Inhibition of Joint Function Limitation, “SDCES”, wherein SDCES means

Significant Decrease In Cartilage Erosion Severity, and “SIJWHLE”, wherein SIJWHLE means Significant Increase in Joints Without Hind Limb Erosion.

The proportion of subjects without hind limb erosions may be analyzed via an *Exact Sequential Cochouran-Armitage Trend* test (SAS® Institute, 1999). The 5 Cochouran-Armitage Trend test is employed when one wishes to determine whether the proportion of positive or “Yes” responders increases or decreases with increasing levels of treatment. For the particular study, it is expected that the number of animals without joint erosions increased with increasing dose.

The ridit analysis may be used to determine differences in overall erosion 10 severity. This parameter takes into account both the erosion grade (0 = no erosion, I = erosion extending into the superficial or middle layers, or II = deep layer erosion), and area (small, medium and large, quantified by dividing the area of the largest erosion in each score into thirds) simultaneously. The analysis recognizes that each unit of severity is different, but does not assume a 15 mathematical relationship between units.

Another animal model for measuring effects of an invention compound on cartilage damage and inflammation and/or pain is described below in Biological Method 6.

BIOLOGICAL METHOD 6

20 Induction of Experimental Osteoarthritis in Rabbit (“EOA in Rabbit”):

Normal rabbits are anaesthetized and anteromedial incisions of the right knees performed. The anterior cruciate ligaments are visualized and sectioned. The wounds are closed and the animals are housed in individual cages, exercised, and fed ad libitum. Rabbits are given either vehicle (water) or an invention 25 compound dosed three times per day with 30-mg/kg/dose or 10-mg/kg/dose. The invention compound may be administered at other doses such as, for example, 3 times 20 mg/kg/day or 3 times 60 mg/kg/day according to the requirements of the invention compound being studied. The rabbits are euthanized 8 weeks after surgery and the proximal end of the tibia and the distal end of the femur are 30 removed from each animal.

Macroscopic Grading

The cartilage changes on the femoral condyles and tibial plateaus are graded separately under a dissecting microscope (Stereozoom, Bausch & Lomb, Rochester, NY). The depth of erosion is graded on a scale of 0 to 4 as follows:

5 grade 0 = normal surface; Grade 1 = minimal fibrillation or a slight yellowish discoloration of the surface; Grade 2 = erosion extending into superficial or middle layers only; Grade 3 = erosion extending into deep layers; Grade 4 = erosion extending to subchondral bone. The surface area changes are measured and expressed in mm². Representative specimens may also be used for

10 histologic grading (see below).

Histologic Grading

Histologic evaluation is performed on sagittal sections of cartilage from the lesional areas of the femoral condyle and tibial plateau. Serial sections (5 um) are prepared and stained with safranin-O. The severity of OA lesions is graded on 15 a scale of 0 - 14 by two independent observers using the histologic-histochemical scale of Mankin *et al.* This scale evaluates the severity of OA lesions based on the loss of safranin-O staining (scale 0 - 4), cellular changes (scale 0 - 3), invasion of tidemark by blood vessels (scale 0 - 1) and structural changes (scale 0 - 6). On this latter scale, 0 indicates normal cartilage structure and 6 indicates erosion of the 20 cartilage down to the subchondral bone. The scoring system is based on the most severe histologic changes in the multiple sections.

Representative specimens of synovial membrane from the medial and lateral knee compartments are dissected from underlying tissues. The specimens are fixed, embedded, and sectioned (5 um) as above, and stained with 25 hematoxylin-eosin. For each compartment, two synovial membrane specimens are examined for scoring purposes and the highest score from each compartment is retained. The average score is calculated and considered as a unit for the whole knee. The severity of synovitis is graded on a scale of 0 to 10 by two independent observers, adding the scores of 3 histologic criteria: synovial lining cell 30 hyperplasia (scale 0 - 2); villous hyperplasia (scale 0 - 3); and degree of cellular infiltration by mononuclear and polymorphonuclear cells (scale 0 - 5): 0 indicates normal structure.

Statistical Analysis

Mean values and SEM is calculated and statistical analysis was done using the Mann-Whitney U-test.

The results of these studies would be expected to show that an invention compound would reduce the size of the lesion on the tibial plateaus, and perhaps the damage in the tibia or on the femoral condyles. In conclusion, these results would show that an invention compound would have significant inhibition effects on the damage to cartilage.

The foregoing studies would establish that an invention compound is effective for the inhibition of cartilage damage and inflammation and/or alleviating pain, and thus useful for the treatment of osteoarthritis or rheumatoid arthritis in human, and other mammalian disorders. Such a treatment offers a distinct advantage over existing treatments that only modify pain or inflammation or and other secondary symptoms. The effectiveness of an invention compound in this model would indicate that the invention compound will have clinically useful effects in preventing and/or treating cartilage damage, pain and/or inflammation.

Administration according to the invention method of an invention compound to a mammal to treat the diseases listed above is preferably, although not necessarily, accomplished by administering the compound, or a salt thereof, in a pharmaceutical dosage form.

The compounds of Formula I, or a pharmaceutically acceptable salt thereof, can be prepared and administered according to the invention method in a wide variety of oral and parenteral pharmaceutical dosage forms. Thus, the compounds of Formula I, or a pharmaceutically acceptable salt thereof, can be administered by injection, that is, intravenously, intramuscularly, intracutaneously, subcutaneously, intraduodenally, or intraperitoneally. Also, the compounds of Formula I, or a pharmaceutically acceptable salt thereof, can be administered by inhalation, for example, intranasally. Additionally, the compounds of Formula I, or a pharmaceutically acceptable salt thereof, can be administered transdermally. It will be obvious to those skilled in the art that the following dosage forms may comprise as the active component an invention compound. The invention compounds generally are present in a concentration of about 5% to about 95% by weight of the formulation.

For preparing pharmaceutical compositions from the compounds of Formula I, or a pharmaceutically acceptable salt thereof, (i.e., the active component) pharmaceutically acceptable carriers can be either solid or liquid. Solid form preparations are preferred. Solid form preparations include powders, tablets, pills, capsules, cachets, suppositories, and dispersible granules. A solid carrier can be one or more substances which may also act as diluents, flavoring agents, solubilizers, lubricants, suspending agents, binders, preservatives, tablet disintegrating agents, or an encapsulating material.

In powders, the carrier is a finely divided solid which is in a mixture with the finely divided active component. Powders suitable for intravenous administration or administration by injection may be lyophilized.

In tablets, the active component is mixed with the carrier having the necessary binding properties in suitable proportions and compacted in the shape and size desired.

The powders and tablets preferably contain from about 5% to about 70%, total, of the active component. Suitable carriers are magnesium carbonate, magnesium stearate, talc, sugar, lactose, pectin, dextrin, starch, gelatin, tragacanth, methylcellulose, sodium carboxymethylcellulose, a low melting wax, cocoa butter, and the like. The term "preparation" is intended to include the formulation of the active component with encapsulating material as a carrier providing a capsule in which the active component, with or without other carriers, is surrounded by a carrier, which is thus in association with it. Similarly, cachets and lozenges are included. Tablets, powders, capsules, pills, cachets, and lozenges can be used as solid dosage forms suitable for oral administration.

For preparing suppositories, a low melting wax, such as a mixture of fatty acid glycerides or cocoa butter, is first melted and the active component is dispersed homogeneously therein, as by stirring. The molten homogenous mixture is then poured into convenient sized molds, allowed to cool, and thereby to solidify.

Liquid form preparations include solutions, suspensions, and emulsions, for example, water or water propylene glycol solutions. For parenteral injection, liquid preparations can be formulated in solution in aqueous polyethylene glycol solution.

Aqueous solutions suitable for oral use can be prepared by dissolving the active component in water and adding suitable colorants, flavors, stabilizing, and thickening agents as desired.

5 Aqueous suspensions suitable for oral use can be made by dispersing the finely divided active component in water with viscous material, such as natural or synthetic gums, resins, methylcellulose, sodium carboxymethylcellulose, and other well-known suspending agents.

10 Also included are solid form preparations which are intended to be converted, shortly before use, to liquid form preparations for oral administration. Such liquid forms include solutions, suspensions, and emulsions. These preparations may contain, in addition to the active component, colorants, flavors, stabilizers, buffers, artificial and natural sweeteners, dispersants, thickeners, solubilizing agents, and the like.

15 The pharmaceutical preparation is preferably in unit dosage form. In such form, the preparation is subdivided into unit doses containing an appropriate quantity of the active component. The unit dosage form can be a packaged preparation, the package containing discrete quantities of preparation, such as packeted tablets, capsules, and powders in vials or ampoules. Also, the unit dosage form can be a capsule, tablet, cachet, or lozenge itself, or it can be the appropriate number of any of these in packaged form.

20 The quantity of active component in a unit dose preparation may be varied or adjusted from 0.01 to 1000 mg, preferably 1 to 500 mg according to the particular application and the potency of the active components. The composition can, if desired, also contain other compatible therapeutic agents.

25 In therapeutic use as agents to treat the above-listed diseases, the compounds of Formula I, or a pharmaceutically acceptable salt thereof, are administered at a dose that is effective for treating at least one symptom of the disease or disorder being treated. The initial dosage of about 1 mg/kg to about 100 mg/kg daily of the active component will be effective. A daily dose range of about 25 mg/kg to about 75 mg/kg of the active component is preferred. The dosages, however, may be varied depending upon the requirements of the patient, the severity of the condition being treated, and the particular invention compound being employed in the invention combination. Determination of the proper dosage

for a particular situation is within the skill of the art as described above. Typical dosages will be from about 0.1 mg/kg to about 500 mg/kg, and ideally about 25 mg/kg to about 250 mg/kg, such that it will be an amount that is effective to treat the particular disease or disorder being treated.

5 A preferred composition for dogs comprises an ingestible liquid peroral dosage form selected from the group consisting of a solution, suspension, emulsion, inverse emulsion, elixir, extract, tincture and concentrate, optionally to be added to the drinking water of the dog being treated. Any of these liquid dosage forms, when formulated in accordance with methods well known in the art,
10 can either be administered directly to the dog being treated, or may be added to the drinking water of the dog being treated. The concentrate liquid form, on the other hand, is formulated to be added first to a given amount of water, from which an aliquot amount may be withdrawn for administration directly to the dog or addition to the drinking water of the dog.

15 A preferred composition provides delayed-, sustained- and/or controlled-release of an invention compound. Such preferred compositions include all such dosage forms which produce $\geq 40\%$ inhibition of cartilage degradation, and result in a plasma concentration of the active component of at least 3 fold the active component's ED₄₀ for at least 2 hours; preferably for at least 4 hours; preferably for at least 8 hours; more preferably for at least 12 hours; more preferably still for
20 at least 16 hours; even more preferably still for at least 20 hours; and most preferably for at least 24 hours. Preferably, there is included within the above-described dosage forms those which produce $\geq 40\%$ inhibition of cartilage degradation, and result in a plasma concentration of the active component of at least 5 fold the active component's ED₄₀ for at least 2 hours, preferably for at least 2 hours, preferably for at least 8 hours, more preferably for at least 12 hours, still more preferably for at least 20 hours and most preferably for at least 24 hours.
25 More preferably, there is included the above-described dosage forms which produce $\geq 50\%$ inhibition of cartilage degradation, and result in a plasma concentration of the active component of at least 5 fold the active component's ED₄₀ for at least 2 hours, preferably for at least 4 hours, preferably for at least 8
30 hours, more preferably for at least 12 hours, still more preferably for at least 20 hours and most preferably for at least 24 hours.

hours, more preferably for at least 12 hours, still more preferably for at least 20 hours and most preferably for at least 24 hours.

The following Formulation Examples 1 to 8 illustrate the invention pharmaceutical compositions. When the formulations comprise the invention compound and a pharmaceutically acceptable carrier, diluent, or excipient, they contain a cartilage damage treating effective amount or a therapeutically effective amount such as, for example, an anti-osteoarthritic effective amount of the invention compound. The examples are representative only, and are not to be construed as limiting the invention in any respect.

10

FORMULATION EXAMPLE 1

Tablet Formulation:

Ingredient	Amount (mg)
An invention compound	25
Lactose	50
Cornstarch (for mix)	10
Cornstarch (paste)	10
Magnesium stearate (1%)	5
Total	100

15

The invention compound, lactose, and cornstarch (for mix) are blended to uniformity. The cornstarch (for paste) is suspended in 200 mL of water and heated with stirring to form a paste. The paste is used to granulate the mixed powders. The wet granules are passed thorough a No. 8 hand screen and dried at 80°C. The dry granules are lubricated with the 1% magnesium stearate and pressed into a tablet. Such tablets can be administered to a human from one to four times a day for inhibiting cartilage damage or treating osteoarthritis.

20

FORMULATION EXAMPLE 2

Coated Tablets:

The tablets of Formulation Example 1 are coated in a customary manner with a coating of sucrose, potato starch, talc, tragacanth, and colorant.

FORMULATION EXAMPLE 3

Injection vials:

5 The pH of a solution of 500 g of an invention compound and 5 g of disodium hydrogen phosphate is adjusted to pH 6.5 in 3 L of double-distilled water using 2 M hydrochloric acid. The solution is sterile filtered, and the filtrate is filled into injection vials, lyophilized under sterile conditions, and aseptically sealed. Each injection vial contains 25 mg of the invention compound.

FORMULATION EXAMPLE 4

Suppositories:

10 A mixture of 25 g of an invention compound, 100 g of soya lecithin, and 1400 g of cocoa butter is fused, poured into molds, and allowed to cool. Each suppository contains 25 mg of the invention compound.

FORMULATION EXAMPLE 5

Solution:

15 A solution is prepared from 1 g of an invention compound, 9.38 g of NaH₂PO₄·12H₂O, 28.48 g of Na₂HPO₄·12H₂O, and 0.1 g benzalkonium chloride in 940 mL of double-distilled water. The pH of the solution is adjusted to pH 6.8 using 2 M hydrochloric acid. The solution is diluted to 1.0 L with double-distilled water, and sterilized by irradiation. A 25 mL volume of the solution contains 25 mg of the invention compound.

FORMULATION EXAMPLE 6

Ointment:

25 500 mg of an invention compound is mixed with 99.5 g of petroleum jelly under aseptic conditions. A 5 g portion of the ointment contains 25 mg of the invention compound.

FORMULATION EXAMPLE 7

Capsules:

5 2 kg of an invention compound are filled into hard gelatin capsules in a customary manner such that each capsule contains 25 mg of the invention compound.

FORMULATION EXAMPLE 8

Ampoules:

10 A solution of 2.5 kg of an invention compound is dissolved in 60 L of double-distilled water. The solution is sterile filtered, and the filtrate is filled into ampoules. The ampoules are lyophilized under sterile conditions and aseptically sealed. Each ampoule contains 25 mg of the invention compound.

15 The following Formulation Examples 9 to 16 illustrate the invention pharmaceutical compositions containing an invention combination in a single formulation with a pharmaceutically acceptable carrier, diluent, or excipient. The examples are representative only, and are not to be construed as limiting the invention in any respect.

FORMULATION EXAMPLE 9

Tablet Formulation:

Ingredient	Amount (mg)
An invention compound	25
A COX-2 inhibitor	20
Lactose	50
Cornstarch (for mix)	10
Cornstarch (paste)	10
Magnesium stearate (1%)	5
Total	120

20 The invention compound or COX-2 inhibitor, lactose, and cornstarch (for mix) are blended to uniformity. The cornstarch (for paste) is suspended in 200 mL of water and heated with stirring to form a paste. The paste is used to granulate the mixed powders. The wet granules are passed through a No. 8 hand screen and

dried at 80°C. The dry granules are lubricated with the 1% magnesium stearate and pressed into a tablet. Such tablets can be administered to a human from one to four times a day for treatment of one of the above-listed diseases.

FORMULATION EXAMPLE 10

5 Coated Tablets:

The tablets of Formulation Example 9 are coated in a customary manner with a coating of sucrose, potato starch, talc, tragacanth, and colorant.

FORMULATION EXAMPLE 11

10 Injection vials:

The pH of a solution of 250 g of a COX-2 inhibitor, 500 g of an invention compound, and 5 g of disodium hydrogen phosphate is adjusted to pH 6.5 in 3 L of double-distilled water using 2 M hydrochloric acid. The solution is sterile filtered, and the filtrate is filled into injection vials, lyophilized under sterile conditions, and aseptically sealed. Each injection vial contains 12.5 mg of COX-2 inhibitor and 25 mg of the invention compound.

FORMULATION EXAMPLE 12

15 Suppositories:

A mixture of 50 g of a COX-2 inhibitor, 25 g of an invention compound, 100 g of soya lecithin, and 1400 g of cocoa butter is fused, poured into molds, and allowed to cool. Each suppository contains 50 mg of the COX-2 inhibitor and 25 mg of the invention compound.

FORMULATION EXAMPLE 13

20 Solution:

A solution is prepared from 0.5 g of a COX-2 inhibitor, 1 g of an invention compound, 9.38 g of NaH₂PO₄·12H₂O, 28.48 g of Na₂HPO₄·12H₂O, and 0.1 g benzalkonium chloride in 940 mL of double-distilled water. The pH of the solution is adjusted to pH 6.8 using 2 M hydrochloric acid. The solution is diluted to 1.0 L with double-distilled water, and sterilized by irradiation. A 25 mL volume

of the solution contains 12.5 mg of the COX-2 inhibitor and 25 mg of the invention compound.

FORMULATION EXAMPLE 14

Ointment:

5 100 mg of a COX-2 inhibitor, 500 mg of an invention compound is mixed with 99.4 g of petroleum jelly under aseptic conditions. A 5 g portion of the ointment contains 5 mg of the COX-2 inhibitor and 25 mg of the invention compound.

FORMULATION EXAMPLE 15

10 Capsules:

2 kg of a COX-2 inhibitor and 20 kg of an invention compound are filled into hard gelatin capsules in a customary manner such that each capsule contains 25 mg of the COX-2 inhibitor and 250 mg of the invention compound.

FORMULATION EXAMPLE 16

15 Ampoules:

A solution of 2.5 kg of a COX-2 inhibitor and 2.5 kg of an invention compound is dissolved in 60 L of double-distilled water. The solution is sterile filtered, and the filtrate is filled into ampoules. The ampoules are lyophilized under sterile conditions and aseptically sealed. Each ampoule contains 25 mg each 20 of the COX-2 inhibitor and the invention compound.

While it may be desirable to formulate a COX-2 inhibitor and an invention compound together in one capsule, tablet, ampoule, solution, and the like, for simultaneous administration, it is not necessary for the purposes of practicing the invention methods. A COX-2 inhibitor and an invention compound alternatively 25 can each be formulated independently in any form such as, for example, those of any one Formulation Examples 1 to 16, and administered to a patient either simultaneously or at different times.

The following examples illustrate the invention pharmaceutical compositions containing discrete formulations of the active components of an 30 invention combination and a pharmaceutically acceptable carrier, diluent, or

excipient. The examples are representative only, and are not to be construed as limiting the invention in any respect.

FORMULATION EXAMPLE 17

5 Tablet Formulation of an invention compound:

Ingredient	Amount (mg)
An invention compound	25
Lactose	50
Cornstarch (for mix)	10
Cornstarch (paste)	10
Magnesium stearate (1%)	5
Total	100

An invention compound, lactose, and cornstarch (for mix) are blended to uniformity. The cornstarch (for paste) is suspended in 200 mL of water and heated with stirring to form a paste. The paste is used to granulate the mixed powders. The wet granules are passed through a No. 8 hand screen and dried at 80°C. The dry granules are lubricated with the 1% magnesium stearate and pressed into a tablet.

10 Injection vial formulation of a COX-2 inhibitor:

The pH of a solution of 500 g of a COX-2 inhibitor and 5 g of disodium hydrogen phosphate is adjusted to pH 6.5 in 3 L of double-distilled water using 2 M hydrochloric acid. The solution is sterile filtered, and the filtrate is filled into injection vials, lyophilized under sterile conditions, and aseptically sealed. Each injection vial contains 25 mg of the COX-2 inhibitor.

Such tablets containing the invention compound can be administered to a human from one to four times a day for treatment of the above-listed diseases, and the injection solutions containing the COX-2 inhibitor can be administered to a human 1 or 2 times per day, wherein the administration by injection is optionally simultaneous with administration of the tablets or at different times, for the treatment of one of the above-listed diseases.

FORMULATION EXAMPLE 18

Coated Tablets containing an invention compound:

The tablets of Formulation Example 17 are coated in a customary manner with a coating of sucrose, potato starch, talc, tragacanth, and colorant.

5 Capsules containing valdecoxib or celecoxib:

2 kg of a COX-2 inhibitor are filled into hard gelatin capsules in a customary manner such that each capsule contains 25 mg of the COX-2 inhibitor.

Such coated tablets containing the invention compound can be administered to a human from one to four times a day for treatment of the above-listed diseases, and the capsules containing the COX-2 inhibitor can be administered to a human 1 or 2 times per day, wherein the administration of the capsules is optionally simultaneous with administration of the tablets or at different times, for the treatment of one of the above-listed diseases.

Still further, it should be appreciated that the invention methods comprising administering an invention combination to a mammal to treat diseases or disorders listed above may be used to treat different diseases simultaneously. For example, administration of a COX-2 inhibitor in accordance with the invention combination may be carried out as described above to treat inflammation, arthritic pain, pain associated with menstrual cramping, and migraines, while an invention compound may be administered to treat OA or inhibit cartilage damage.

As shown above, the invention methods comprising administering an invention compound offer a distinct advantage over existing treatments for diseases such as OA that comprise cartilage damage, wherein the existing treatments modify pain or secondary symptoms, but do not show a disease modifying effect.

While the invention has been described and illustrated with reference to certain particular embodiments thereof, those skilled in the art will appreciate that various adaptations, changes, modifications, substitutions, deletions, or additions of procedures and protocols may be made without departing from the spirit and scope of the invention. It is intended, therefore, that the invention be defined by the scope of the claims that follow and that such claims be interpreted as broadly as is reasonable.

All references cited above are hereby incorporated by reference herein.

Having described the invention method, various embodiments of the invention are hereupon claimed.
